YELLOW = the team the five highlighted stats (SOR, PPG, FEI, Off Eff, Net Success Rate) say wins, with its win %. ORANGE ROW = that pick is NOT the team Vegas favors. TEAL NAME = that team has a 90%+ delta on the grid. STATS FOR PICK = how many of the five back it (SOR counts as half a vote). 83% of games were called right in a backtest on 150 graded games it wasn't trained on; treat 55-65% as a lean, not a lock.

VEGAS = home-team spread from CFBD's betting lines (negative = home favored), O/U = total. NUTS vs VEGAS = which side the Nuts like more than the market, in points.

VEGAS CELL COLOR = how each team has done against a SIMILAR number: the home team as a favorite/underdog of this size and the away team as a favorite/underdog of this size (sizes: 10+, 3-9, close; W-L-Push, home and road games together). Needs 2+ graded games for both; if the exact size is too thin it uses fav/dog of any size (marked *). Second line = home team's record at home (H) and away team's record on the road (A). **GREEN** = those records favor the team Vegas has as the FAVORITE (darker = bigger gap). **PURPLE** = they favor the UNDERDOG. **GRAY** = too few games to read. No color = even. Reality check: so far in 2026, favorites of every size cover about 50% league-wide, and the side with the better same-size record covered 46-56% (noise). Treat it as context, not a pick.

AGAINST THE SPREAD

Season record vs. the Vegas number for every graded game: W-L-Push (cover %, average points vs. the number per game). Games with no posted line (mostly FCS buy games) are not counted.
