

CFB DEEP-DIVE MATCHUP REPORT -- Week 6, 2026 season. Every number below is a real, live-pulled stat (TeamRankings / ESPN / bcftoys / CFBD) as of this run, graded against this week's real, computed FBS-wide average -- not a placeholder. Rank in parentheses is each team's real FBS-wide rank for that stat. Team name in turquoise = the tuned stat-vote model's real pick for that game; orange = that pick is flagged risky (Def Sacks/Game disagrees with it).

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN                                                                                                                                                          |             |                                      |            |                                                                                                                                                 |

Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               | 383.8 (57)  | Southern Mississippi OFF vs Troy DEF | 382.0 (67) | -203.7                                                                                                                                          |
|                                                                                                                                                                    | 539.0 (137) | Southern Mississippi DEF vs Troy OFF | 430.5 (34) |                                                                                                                                                 |
| YARDS / PLAY                                                                                                                                                       |             |                                      |            |                                                                                                                                                 |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 5.5 (62)    | Southern Mississippi OFF vs Troy DEF | 6.1 (106)  | -0.70                                                                                                                                           |
|                                                                                                                                                                    | 6.7 (121)   | Southern Mississippi DEF vs Troy OFF | 5.6 (59)   |                                                                                                                                                 |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| -2.66                                          | +13.4 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |            |                                      |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 61.5 (131) | Southern Mississippi OFF vs Troy DEF | 62.5 (5)  | -53.0 |
|                                                                                                                                  | 84.2 (60)  | Southern Mississippi DEF vs Troy OFF | 92.9 (27) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                      |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 30.0 (115) | Southern Mississippi OFF vs Troy DEF | 31.8 (24) | -28.0 |
|                                                                                                                   | 47.5 (116) | Southern Mississippi DEF vs Troy OFF | 42.4 (52) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

| PASS YARDS / GAME                    |            |                                      |             |
|--------------------------------------|------------|--------------------------------------|-------------|
| <b>+105.0</b><br>head-to-head +119.8 | 282.8 (22) | Southern Mississippi OFF vs Troy DEF | 269.0 (117) |
|                                      | 220.5 (65) | Southern Mississippi DEF vs Troy OFF | 211.5 (79)  |

| PASS YARDS / ATTEMPT               |          |                                      |          |
|------------------------------------|----------|--------------------------------------|----------|
| <b>+0.66</b><br>head-to-head +0.70 | 7.4 (64) | Southern Mississippi OFF vs Troy DEF | 8.1 (92) |
|                                    | 8.1 (92) | Southern Mississippi DEF vs Troy OFF | 6.7 (91) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                              |           |
|-----------|------------------------------|-----------|
| 59.8 (95) | Southern Mississippi vs Troy | 64.2 (72) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                      |           |
|----------------------|--------------------------------------|-----------|
| 32.2 (107)           | Southern Mississippi OFF vs Troy DEF | 43.3 (34) |
| 33.7 (16)            | Southern Mississippi DEF vs Troy OFF | 46.1 (76) |

| SACKS ALLOWED / GAME |                                      |           |                                    |
|----------------------|--------------------------------------|-----------|------------------------------------|
| 2.80 (104)           | Southern Mississippi OFF vs Troy DEF | 2.00 (60) | <b>-11.6</b><br>head-to-head +2.04 |
| 2.30 (48)            | Southern Mississippi DEF vs Troy OFF | 2.30 (87) |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                              |      |
|--------------|------------------------------|------|
| 62.1         | Southern Mississippi vs Troy | 57.9 |

| QB RUSH YARDS / GAME |                              |    |
|----------------------|------------------------------|----|
| --                   | Southern Mississippi vs Troy | -- |

| PASSING EXPLOSIVENESS              |           |                                      |            |
|------------------------------------|-----------|--------------------------------------|------------|
| <b>+0.07</b><br>head-to-head +0.04 | 1.19 (91) | Southern Mississippi OFF vs Troy DEF | 1.35 (114) |
|                                    | 1.24 (75) | Southern Mississippi DEF vs Troy OFF | 1.26 (55)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                      |      |

## RUSHING GAME

| RUSH YARDS / GAME |                                      |            |                                      |
|-------------------|--------------------------------------|------------|--------------------------------------|
| 101.0 (115)       | Southern Mississippi OFF vs Troy DEF | 113.0 (30) | <b>+234.4</b><br>head-to-head +323.5 |
| 318.5 (138)       | Southern Mississippi DEF vs Troy OFF | 219.0 (12) |                                      |

| RUSH YARDS / ATTEMPT |                                      |          |                                    |
|----------------------|--------------------------------------|----------|------------------------------------|
| 3.6 (96)             | Southern Mississippi OFF vs Troy DEF | 4.1 (56) | <b>+2.94</b><br>head-to-head +3.60 |
| 6.2 (134)            | Southern Mississippi DEF vs Troy OFF | 5.1 (20) |                                    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                      |          |
|------------|--------------------------------------|----------|
| 0.00 (1)   | Southern Mississippi OFF vs Troy DEF | 4.8 (35) |
| 3.6 (77)   | Southern Mississippi DEF vs Troy OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                                      |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.5 (15)  | Southern Mississippi OFF vs Troy DEF | 2.53 (25) | -0.31 |
|                                                                                                                                              | 3.4 (126) | Southern Mississippi DEF vs Troy OFF | 3.0 (81)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |            |                                      |           |  |
|-----------------------------|------------|--------------------------------------|-----------|--|
| +17.0<br>head-to-head +6.76 | 0.88 (4)   | Southern Mississippi OFF vs Troy DEF | 0.73 (76) |  |
|                             | 0.80 (107) | Southern Mississippi DEF vs Troy OFF | 0.74 (74) |  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |            |                                      |           |                                                                                                                                            |
|------------|------------|--------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +0.25      | 0.10 (4)   | Southern Mississippi OFF vs Troy DEF | 0.24 (21) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|            | 0.15 (113) | Southern Mississippi DEF vs Troy OFF | 0.19 (97) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                      |            |                             |
|------------|------------|--------------------------------------|------------|-----------------------------|
|            | 0.15 (72)  | Southern Mississippi OFF vs Troy DEF | 0.17 (63)  | +1.83<br>head-to-head +2.40 |
|            | 0.12 (128) | Southern Mississippi DEF vs Troy OFF | 0.17 (118) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                      |           |                             |
|-----------------|------------|--------------------------------------|-----------|-----------------------------|
|                 | 1.09 (73)  | Southern Mississippi OFF vs Troy DEF | 0.97 (71) | +0.45<br>head-to-head +0.49 |
|                 | 1.27 (123) | Southern Mississippi DEF vs Troy OFF | 1.28 (28) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |  |  |  |  |
|------------------|--|--|--|--|
|------------------|--|--|--|--|

|            |                                      |            |                    |
|------------|--------------------------------------|------------|--------------------|
| 0.62 (119) | Southern Mississippi OFF vs Troy DEF | 1.61 (121) | +1.41              |
| 1.96 (129) | Southern Mississippi DEF vs Troy OFF | 1.80 (21)  | head-to-head +1.53 |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.29 (126) | F+   | -0.58 (100) |
| -1.18 (123) | OF+  | -0.96 (111) |
| -1.13 (122) | DF+  | -0.02 (68)  |
| -0.81 (123) | FEI  | -0.34 (92)  |
| -0.54 (127) | OFEI | -0.39 (112) |
| -0.21 (96)  | DFEI | 0.10 (55)   |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.46

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.47

|             |                         |            |
|-------------|-------------------------|------------|
| -0.22 (113) | NET SUCCESS RATE        | 0.01 (64)  |
| 0.27 (123)  | OFF SUCCESS RATE (OSR)  | 0.32 (106) |
| 0.48 (92)   | OPP SUCCESS RATE (DSR)  | 0.31 (32)  |
| 0.44 (67)   | OFF SUCCESS RATE (CFBD) | 0.43 (82)  |
| 0.45 (111)  | DEF SUCCESS RATE (CFBD) | 0.40 (68)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.23

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-0.04

head-to-head +0.23

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.08 (101) | OFF PPA         | 0.13 (80) |
| 0.20 (120) | DEF PPA ALLOWED | 0.07 (71) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.12

head-to-head +0.18

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN     |            |                                           |             |                                                                                                                                                                    |
|---------------|------------|-------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAYS / GAME  |            |                                           |             |                                                                                                                                                                    |
| +0.40         | 61.3       | Jacksonville St OFF vs Kennesaw State DEF | 67.0        | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.                    |
|               | 67.8       | Jacksonville St DEF vs Kennesaw State OFF | 61.7        |                                                                                                                                                                    |
| POINTS / GAME |            |                                           |             |                                                                                                                                                                    |
| +13.2         | 22.0 (86)  | Jacksonville St OFF vs Kennesaw State DEF | 30.0 (91)   | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|               | 25.5 (64)  | Jacksonville St DEF vs Kennesaw State OFF | 13.3 (126)  |                                                                                                                                                                    |
| YARDS / GAME  |            |                                           |             |                                                                                                                                                                    |
| +142.6        | 359.0 (79) | Jacksonville St OFF vs Kennesaw State DEF | 430.7 (110) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               |
|               | 330.8 (41) | Jacksonville St DEF vs Kennesaw State OFF | 316.3 (109) |                                                                                                                                                                    |
| YARDS / PLAY  |            |                                           |             |                                                                                                                                                                    |
| +2.30         | 5.9 (47)   | Jacksonville St OFF vs Kennesaw State DEF | 6.4 (111)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|               | 4.9 (34)   | Jacksonville St DEF vs Kennesaw State OFF | 5.1 (87)    |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

--

+7.45

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |            |                                           |             |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------|-------------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 75.0 (109) | Jacksonville St OFF vs Kennesaw State DEF | 100.0 (128) | -4.80 |
|                                                                                                                                  | 90.9 (99)  | Jacksonville St DEF vs Kennesaw State OFF | 88.9 (51)   |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                           |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 40.0 (68)  | Jacksonville St OFF vs Kennesaw State DEF | 42.9 (99) | -4.60 |
|                                                                                                                   | 47.5 (116) | Jacksonville St DEF vs Kennesaw State OFF | 40.0 (68) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

## PASSING GAME

### PASS YARDS / GAME

|                                    |            |                                           |            |
|------------------------------------|------------|-------------------------------------------|------------|
| <b>-20.3</b><br>head-to-head +67.8 | 201.5 (88) | Jacksonville St OFF vs Kennesaw State DEF | 225.0 (69) |
|                                    | 166.0 (16) | Jacksonville St DEF vs Kennesaw State OFF | 192.7 (94) |

### PASS YARDS / ATTEMPT

|                                    |          |                                           |           |
|------------------------------------|----------|-------------------------------------------|-----------|
| <b>+1.66</b><br>head-to-head +3.90 | 8.1 (39) | Jacksonville St OFF vs Kennesaw State DEF | 8.4 (107) |
|                                    | 6.4 (32) | Jacksonville St DEF vs Kennesaw State OFF | 6.2 (110) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

### QBR

|           |                                   |            |
|-----------|-----------------------------------|------------|
| 76.9 (50) | Jacksonville St vs Kennesaw State | 56.5 (103) |
|-----------|-----------------------------------|------------|

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

### OFFENSIVE EFFICIENCY

|           |                                           |            |
|-----------|-------------------------------------------|------------|
| 51.4 (66) | Jacksonville St OFF vs Kennesaw State DEF | 48.3 (48)  |
| 37.6 (23) | Jacksonville St DEF vs Kennesaw State OFF | 33.1 (104) |

### SACKS ALLOWED / GAME

|                                    |           |                                           |            |
|------------------------------------|-----------|-------------------------------------------|------------|
| <b>-10.9</b><br>head-to-head +1.20 | 1.00 (15) | Jacksonville St OFF vs Kennesaw State DEF | 0.70 (130) |
|                                    | 2.00 (60) | Jacksonville St DEF vs Kennesaw State OFF | 1.00 (15)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

### COMPLETION %

|      |                                   |      |
|------|-----------------------------------|------|
| 68.0 | Jacksonville St vs Kennesaw State | 65.6 |
|------|-----------------------------------|------|

### QB RUSH YARDS / GAME

|    |                                   |    |
|----|-----------------------------------|----|
| -- | Jacksonville St vs Kennesaw State | -- |
|----|-----------------------------------|----|

### PASSING EXPLOSIVENESS

|                                    |           |                                           |            |
|------------------------------------|-----------|-------------------------------------------|------------|
| <b>-0.18</b><br>head-to-head +0.18 | 1.19 (89) | Jacksonville St OFF vs Kennesaw State DEF | 1.09 (19)  |
|                                    | 1.05 (13) | Jacksonville St DEF vs Kennesaw State OFF | 1.05 (133) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

### INTERCEPTIONS / GAME

|      |                                           |      |
|------|-------------------------------------------|------|
| 0.80 | Jacksonville St OFF vs Kennesaw State DEF | --   |
| --   | Jacksonville St DEF vs Kennesaw State OFF | 0.30 |

## RUSHING GAME

### RUSH YARDS / GAME

|                                    |            |                                           |             |
|------------------------------------|------------|-------------------------------------------|-------------|
| <b>+60.1</b><br>head-to-head +74.7 | 157.5 (57) | Jacksonville St OFF vs Kennesaw State DEF | 205.7 (121) |
|                                    | 164.8 (84) | Jacksonville St DEF vs Kennesaw State OFF | 123.7 (90)  |

### RUSH YARDS / ATTEMPT

|                                    |          |                                           |           |
|------------------------------------|----------|-------------------------------------------|-----------|
| <b>+1.34</b><br>head-to-head +1.40 | 4.5 (47) | Jacksonville St OFF vs Kennesaw State DEF | 5.2 (118) |
|                                    | 4.1 (56) | Jacksonville St DEF vs Kennesaw State OFF | 4.2 (70)  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

### TFL / GAME

|          |                                           |            |
|----------|-------------------------------------------|------------|
| 0.00 (1) | Jacksonville St OFF vs Kennesaw State DEF | 2.50 (108) |
| 5.2 (25) | Jacksonville St DEF vs Kennesaw State OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|              |           |                                           |           |                                                                                                                                              |
|--------------|-----------|-------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.05</b> | 3.1 (70)  | Jacksonville St OFF vs Kennesaw State DEF | 3.2 (110) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|              | 2.91 (81) | Jacksonville St DEF vs Kennesaw State OFF | 3.3 (41)  |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|                                    |            |                                           |            |
|------------------------------------|------------|-------------------------------------------|------------|
| <b>+23.4</b><br>head-to-head +1.38 | 0.81 (23)  | Jacksonville St OFF vs Kennesaw State DEF | 0.86 (127) |
|                                    | 0.84 (122) | Jacksonville St DEF vs Kennesaw State OFF | 0.82 (22)  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|              |           |                                           |            |                                                                                                                                            |
|--------------|-----------|-------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.08</b> | 0.18 (74) | Jacksonville St OFF vs Kennesaw State DEF | 0.19 (73)  | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|              | 0.17 (91) | Jacksonville St DEF vs Kennesaw State OFF | 0.20 (103) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                                    |           |                                           |            |
|------------------------------------|-----------|-------------------------------------------|------------|
| <b>+6.63</b><br>head-to-head +5.50 | 0.13 (45) | Jacksonville St OFF vs Kennesaw State DEF | 0.11 (135) |
|                                    | 0.15 (78) | Jacksonville St DEF vs Kennesaw State OFF | 0.14 (61)  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

#### 2ND LEVEL YARDS

|                                    |           |                                           |            |
|------------------------------------|-----------|-------------------------------------------|------------|
| <b>+0.34</b><br>head-to-head +0.20 | 1.20 (51) | Jacksonville St OFF vs Kennesaw State DEF | 1.25 (118) |
|                                    | 0.94 (56) | Jacksonville St DEF vs Kennesaw State OFF | 1.30 (26)  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

#### OPEN FIELD YARDS

|           |                                           |           |                                    |
|-----------|-------------------------------------------|-----------|------------------------------------|
| 1.04 (86) | Jacksonville St OFF vs Kennesaw State DEF | 0.84 (48) | <b>-0.19</b><br>head-to-head +0.28 |
| 1.04 (72) | Jacksonville St DEF vs Kennesaw State OFF | 1.11 (80) |                                    |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

#### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.53 (98)  | F+   | -1.03 (115) |
| -0.43 (88)  | OF+  | -0.90 (110) |
| -0.55 (93)  | DF+  | -0.92 (114) |
| -0.59 (107) | FEI  | -0.77 (121) |
| -0.35 (109) | OFEI | -0.38 (110) |
| -0.22 (97)  | DFEI | -0.33 (120) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

#### NET EFFICIENCY DELTA (THE VEGAS FILTER)

|              |                                                                                                                                                                                                                   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.14</b> | Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home). |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

#### FEI DELTA

|              |                                                                                                                                                                                                                   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.18</b> | Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close. |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|            |                         |             |
|------------|-------------------------|-------------|
| -0.01 (72) | NET SUCCESS RATE        | -0.41 (133) |
| 0.47 (53)  | OFF SUCCESS RATE (OSR)  | 0.27 (122)  |
| 0.48 (93)  | OPP SUCCESS RATE (DSR)  | 0.68 (136)  |
| 0.48 (34)  | OFF SUCCESS RATE (CFBD) | 0.46 (48)   |
| 0.42 (93)  | DEF SUCCESS RATE (CFBD) | 0.43 (94)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

#### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

+0.40

| 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE) |  |
|-------------------------------------------------|--|
| +0.30                                           |  |
| head-to-head +0.40                              |  |

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.20 (52) | OFF PPA         | 0.10 (92)  |
| 0.04 (59) | DEF PPA ALLOWED | 0.15 (103) |

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

| PASSING DOWN PANIC INDEX (PPA) |  |
|--------------------------------|--|
| +0.14                          |  |
| head-to-head +0.22             |  |

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN                                                                                                                                                          |            |                                          |            |        |

| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 5.4 (66)   | New Mexico State OFF vs Florida Intl DEF | 3.9 (5)    | -1.90  |
|                                                                                                                                                                    | 5.7 (76)   | New Mexico State DEF vs Florida Intl OFF | 5.5 (62)   |        |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| +10.5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | -14.4 |
| <b>THE FRAUD INDEX &amp; FRAUD GAP (POINTS VS. YARDS):</b> Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE % |           |                                          |             |                                                                                                                                  |
|------------|-----------|------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------|
| +19.5      | 90.0 (45) | New Mexico State OFF vs Florida Intl DEF | 100.0 (128) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 90.5 (98) | New Mexico State DEF vs Florida Intl OFF | 80.0 (94)   |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |           |                                          |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|------------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 41.5 (57) | New Mexico State OFF vs Florida Intl DEF | 33.3 (28) | -9.04 |
|                                                                                                                   | 42.4 (96) | New Mexico State DEF vs Florida Intl OFF | 41.5 (57) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

## PASSING GAME

### PASS YARDS / GAME

|             |                                          |            |                     |
|-------------|------------------------------------------|------------|---------------------|
| 235.5 (58)  | New Mexico State OFF vs Florida Intl DEF | 183.3 (30) | +131.3              |
| 261.8 (109) | New Mexico State DEF vs Florida Intl OFF | 316.3 (5)  | head-to-head +159.3 |

### PASS YARDS / ATTEMPT

|          |                                          |          |                    |
|----------|------------------------------------------|----------|--------------------|
| 6.6 (96) | New Mexico State OFF vs Florida Intl DEF | 5.7 (5)  | +0.26              |
| 7.8 (82) | New Mexico State DEF vs Florida Intl OFF | 7.3 (68) | head-to-head +2.80 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

### QBR

|            |                                  |            |
|------------|----------------------------------|------------|
| 39.8 (129) | New Mexico State vs Florida Intl | 57.0 (102) |
|------------|----------------------------------|------------|

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

### OFFENSIVE EFFICIENCY

|            |                                          |            |
|------------|------------------------------------------|------------|
| 32.9 (106) | New Mexico State OFF vs Florida Intl DEF | 68.7 (97)  |
| 53.2 (59)  | New Mexico State DEF vs Florida Intl OFF | 19.3 (130) |

### SACKS ALLOWED / GAME

|                    |           |                                          |           |
|--------------------|-----------|------------------------------------------|-----------|
| -11.5              | 2.30 (87) | New Mexico State OFF vs Florida Intl DEF | 2.30 (48) |
| head-to-head +1.81 | 2.50 (36) | New Mexico State DEF vs Florida Intl OFF | 0.70 (8)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

### COMPLETION %

|      |                                  |      |
|------|----------------------------------|------|
| 58.5 | New Mexico State vs Florida Intl | 57.7 |
|------|----------------------------------|------|

### QB RUSH YARDS / GAME

|    |                                  |    |
|----|----------------------------------|----|
| -- | New Mexico State vs Florida Intl | -- |
|----|----------------------------------|----|

### PASSING EXPLOSIVENESS

|                    |           |                                          |           |
|--------------------|-----------|------------------------------------------|-----------|
| +0.12              | 1.43 (8)  | New Mexico State OFF vs Florida Intl DEF | 1.16 (41) |
| head-to-head +0.15 | 1.23 (70) | New Mexico State DEF vs Florida Intl OFF | 1.21 (81) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

### INTERCEPTIONS / GAME

|      |                                          |      |
|------|------------------------------------------|------|
| 1.50 | New Mexico State OFF vs Florida Intl DEF | --   |
| --   | New Mexico State DEF vs Florida Intl OFF | 1.70 |

RUSHING GAME

| RUSH YARDS / GAME |            |                                          |             |                             |
|-------------------|------------|------------------------------------------|-------------|-----------------------------|
|                   | 128.5 (83) | New Mexico State OFF vs Florida Intl DEF | 73.3 (6)    | -47.6<br>head-to-head +53.7 |
|                   | 145.8 (62) | New Mexico State DEF vs Florida Intl OFF | 109.7 (105) |                             |

| RUSH YARDS / ATTEMPT |          |                                          |           |                             |
|----------------------|----------|------------------------------------------|-----------|-----------------------------|
|                      | 4.3 (62) | New Mexico State OFF vs Florida Intl DEF | 2.30 (5)  | -0.96<br>head-to-head +0.80 |
|                      | 4.1 (56) | New Mexico State DEF vs Florida Intl OFF | 3.3 (107) |                             |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                          |          |
|------------|------------------------------------------|----------|
| 0.00 (1)   | New Mexico State OFF vs Florida Intl DEF | 5.8 (11) |
| 4.2 (53)   | New Mexico State DEF vs Florida Intl OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |          |                                          |            |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|----------|------------------------------------------|------------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.1 (73) | New Mexico State OFF vs Florida Intl DEF | 2.23 (9)   | -0.54 |
|                                                                                                                                              | 3.0 (92) | New Mexico State DEF vs Florida Intl OFF | 2.83 (106) |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                          |           |                             |
|--------------------|------------|------------------------------------------|-----------|-----------------------------|
|                    | 0.70 (95)  | New Mexico State OFF vs Florida Intl DEF | 0.67 (36) | +18.5<br>head-to-head +25.6 |
|                    | 0.83 (119) | New Mexico State DEF vs Florida Intl OFF | 0.79 (40) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                                          |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.16 (62) | New Mexico State OFF vs Florida Intl DEF | 0.22 (34) | -0.75 |
|                                                                                                                                            | 0.19 (67) | New Mexico State DEF vs Florida Intl OFF | 0.18 (79) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                          |           |                             |
|------------|------------|------------------------------------------|-----------|-----------------------------|
|            | 0.17 (110) | New Mexico State OFF vs Florida Intl DEF | 0.18 (44) | +2.13<br>head-to-head +6.00 |
|            | 0.13 (107) | New Mexico State DEF vs Florida Intl OFF | 0.15 (87) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

#### 2ND LEVEL YARDS

|                                    |           |                                          |            |
|------------------------------------|-----------|------------------------------------------|------------|
| <b>-0.13</b><br>head-to-head +0.11 | 1.22 (46) | New Mexico State OFF vs Florida Intl DEF | 0.76 (20)  |
|                                    | 1.00 (77) | New Mexico State DEF vs Florida Intl OFF | 0.86 (124) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

#### OPEN FIELD YARDS

|                                    |            |                                          |            |
|------------------------------------|------------|------------------------------------------|------------|
| <b>-0.55</b><br>head-to-head +0.08 | 1.56 (42)  | New Mexico State OFF vs Florida Intl DEF | 0.24 (4)   |
|                                    | 1.42 (106) | New Mexico State DEF vs Florida Intl OFF | 0.31 (138) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

#### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.11 (120) | F+   | -0.81 (105) |
| -1.03 (114) | OF+  | -1.33 (127) |
| -0.91 (112) | DF+  | 0.03 (67)   |
| -0.76 (119) | FEI  | -0.72 (115) |
| -0.43 (116) | OFEI | -0.61 (133) |
| -0.24 (98)  | DFEI | -0.01 (71)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

#### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.05**

#### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.04**

|             |                         |            |
|-------------|-------------------------|------------|
| -0.15 (106) | NET SUCCESS RATE        | -0.10 (97) |
| 0.33 (98)   | OFF SUCCESS RATE (OSR)  | 0.32 (106) |
| 0.49 (96)   | OPP SUCCESS RATE (DSR)  | 0.42 (69)  |
| 0.42 (92)   | OFF SUCCESS RATE (CFBD) | 0.39 (114) |
| 0.40 (76)   | DEF SUCCESS RATE (CFBD) | 0.34 (16)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

#### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.05

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-0.04

head-to-head +0.05

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

0.09 (100)

OFF PPA

0.01 (119)

0.08 (78)

DEF PPA ALLOWED

-0.00 (47)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

-0.13

head-to-head +0.00

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               | 337.7 (96) | Sam Houston State OFF vs Liberty DEF | 300.8 (25) | -180.8                                                                                                                                          |
|                                                                                                                                                                    | 393.0 (78) | Sam Houston State DEF vs Liberty OFF | 426.3 (37) |                                                                                                                                                 |
| YARDS / PLAY                                                                                                                                                       |            |                                      |            |                                                                                                                                                 |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 4.8 (109)  | Sam Houston State OFF vs Liberty DEF | 5.1 (48)   | -1.90                                                                                                                                           |
|                                                                                                                                                                    | 5.5 (66)   | Sam Houston State DEF vs Liberty OFF | 6.3 (25)   |                                                                                                                                                 |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+5.93

+6.09

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |            |                                      |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 75.0 (109) | Sam Houston State OFF vs Liberty DEF | 66.7 (7)  | -12.5 |
|                                                                                                                                  | 70.0 (14)  | Sam Houston State DEF vs Liberty OFF | 84.2 (74) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |           |                                      |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 36.4 (89) | Sam Houston State OFF vs Liberty DEF | 26.1 (7)  | -21.7 |
|                                                                                                                   | 34.1 (35) | Sam Houston State DEF vs Liberty OFF | 50.0 (12) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME                |            |                                      |            |  |
|-----------------------------|------------|--------------------------------------|------------|--|
| PASS YARDS / GAME           |            |                                      |            |  |
| +5.49<br>head-to-head +57.3 | 282.0 (23) | Sam Houston State OFF vs Liberty DEF | 170.3 (19) |  |
|                             | 180.7 (27) | Sam Houston State DEF vs Liberty OFF | 214.3 (74) |  |

| PASS YARDS / ATTEMPT |          |                                      |          |                             |
|----------------------|----------|--------------------------------------|----------|-----------------------------|
|                      | 7.1 (79) | Sam Houston State OFF vs Liberty DEF | 6.2 (24) | +0.46<br>head-to-head +2.00 |
|                      | 6.2 (24) | Sam Houston State DEF vs Liberty OFF | 9.1 (13) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                              |           |
|-----------|------------------------------|-----------|
| 60.9 (90) | Sam Houston State vs Liberty | 61.0 (89) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                      |           |
|----------------------|--------------------------------------|-----------|
| 41.1 (85)            | Sam Houston State OFF vs Liberty DEF | 65.7 (90) |
| 61.4 (76)            | Sam Houston State DEF vs Liberty OFF | 39.9 (87) |

| SACKS ALLOWED / GAME        |           |                                      |           |
|-----------------------------|-----------|--------------------------------------|-----------|
| -10.6<br>head-to-head +4.08 | 3.7 (131) | Sam Houston State OFF vs Liberty DEF | 1.80 (74) |
|                             | 2.70 (32) | Sam Houston State DEF vs Liberty OFF | 1.80 (60) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                              |      |
|--------------|------------------------------|------|
| 64.7         | Sam Houston State vs Liberty | 61.7 |

| QB RUSH YARDS / GAME |                              |    |
|----------------------|------------------------------|----|
| --                   | Sam Houston State vs Liberty | -- |

| PASSING EXPLOSIVENESS       |           |                                      |            |
|-----------------------------|-----------|--------------------------------------|------------|
| +0.18<br>head-to-head +0.25 | 1.28 (48) | Sam Houston State OFF vs Liberty DEF | 1.36 (115) |
|                             | 1.26 (81) | Sam Houston State DEF vs Liberty OFF | 1.14 (117) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                      |      |
|----------------------|--------------------------------------|------|

| --                   | Sam Houston State DEF vs Liberty OFF | 0.00 |

## RUSHING GAME

| RUSH YARDS / GAME |             |                                      |                               |
|-------------------|-------------|--------------------------------------|-------------------------------|
|                   | 55.7 (138)  | Sam Houston State OFF vs Liberty DEF | 130.5 (47)                    |
|                   | 212.3 (126) | Sam Houston State DEF vs Liberty OFF | 212.0 (17)                    |
|                   |             |                                      | +121.2<br>head-to-head +238.1 |

| RUSH YARDS / ATTEMPT |            |                                      |                             |
|----------------------|------------|--------------------------------------|-----------------------------|
|                      | 2.00 (138) | Sam Houston State OFF vs Liberty DEF | 4.3 (69)                    |
|                      | 5.4 (122)  | Sam Houston State DEF vs Liberty OFF | 5.0 (22)                    |
|                      |            |                                      | +2.04<br>head-to-head +4.10 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                      |          |
|------------|--------------------------------------|----------|
| 0.00 (1)   | Sam Houston State OFF vs Liberty DEF | 4.8 (35) |
| 4.2 (53)   | Sam Houston State DEF vs Liberty OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |            |                                      |          |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------|----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.80 (111) | Sam Houston State OFF vs Liberty DEF | 3.0 (95) | -0.53 |
|                                                                                                                                              | 3.1 (99)   | Sam Houston State DEF vs Liberty OFF | 3.3 (43) |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                      |           |                             |
|--------------------|------------|--------------------------------------|-----------|-----------------------------|
|                    | 0.61 (124) | Sam Houston State OFF vs Liberty DEF | 0.67 (36) | +10.7<br>head-to-head +26.7 |
|                    | 0.74 (80)  | Sam Houston State DEF vs Liberty OFF | 0.81 (33) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                      |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.21 (119) | Sam Houston State OFF vs Liberty DEF | 0.21 (47) | -9.18 |
|                                                                                                                                            | 0.20 (58)  | Sam Houston State DEF vs Liberty OFF | 0.13 (18) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |            |                                      |           |  |
|-----------------------------|------------|--------------------------------------|-----------|--|
| -6.07<br>head-to-head +0.50 | 0.17 (120) | Sam Houston State OFF vs Liberty DEF | 0.19 (26) |  |
|                             | 0.22 (7)   | Sam Houston State DEF vs Liberty OFF | 0.15 (75) |  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                      |            |                             |
|-----------------|------------|--------------------------------------|------------|-----------------------------|
|                 | 1.11 (71)  | Sam Houston State OFF vs Liberty DEF | 1.16 (110) | +0.48<br>head-to-head +0.32 |
|                 | 1.31 (127) | Sam Houston State DEF vs Liberty OFF | 1.27 (32)  |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                      |            |                             |
|------------------|------------|--------------------------------------|------------|-----------------------------|
|                  | 0.52 (130) | Sam Houston State OFF vs Liberty DEF | 1.41 (105) | +0.98<br>head-to-head +1.39 |
|                  | 1.87 (126) | Sam Houston State DEF vs Liberty OFF | 1.46 (50)  |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -1.12 (121) | F+   | 0.13 (61)  |
| -1.09 (117) | OF+  | 0.14 (60)  |
| -0.90 (110) | DF+  | 0.05 (66)  |
| -0.78 (122) | FEI  | -0.07 (69) |
| -0.48 (119) | OFEI | -0.02 (62) |
| -0.25 (100) | DFEI | -0.09 (85) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.62

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.71

|             |                         |           |
|-------------|-------------------------|-----------|
| -0.11 (100) | NET SUCCESS RATE        | 0.28 (12) |
| 0.24 (125)  | OFF SUCCESS RATE (OSR)  | 0.56 (20) |
| 0.35 (41)   | OPP SUCCESS RATE (DSR)  | 0.29 (19) |
| 0.44 (69)   | OFF SUCCESS RATE (CFBD) | 0.46 (47) |
| 0.39 (62)   | DEF SUCCESS RATE (CFBD) | 0.35 (27) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.39

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.07

head-to-head +0.38

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.10 (88) | OFF PPA         | 0.13 (82)  |
| 0.07 (70) | DEF PPA ALLOWED | -0.00 (49) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

-0.02

head-to-head +0.09

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                            |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|--------------------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 58.3 | Missouri State OFF vs Western Kentucky DEF | 61.8 | -0.20 |
|                                                                                                                                                 | 79.3 | Missouri State DEF vs Western Kentucky OFF | 76.0 |       |

POINTS / GAME

|       |            |                                            |            |                                                                                                                                                                    |
|-------|------------|--------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +14.0 | 16.0 (122) | Missouri State OFF vs Western Kentucky DEF | 47.8 (137) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 38.0 (123) | Missouri State DEF vs Western Kentucky OFF | 11.8 (130) |                                                                                                                                                                    |

YARDS / GAME

|                                                                                                                                                      |             |                                            |             |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------------------------------|-------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 270.7 (130) | Missouri State OFF vs Western Kentucky DEF | 461.0 (126) | -65.1 |
|                                                                                                                                                      | 512.0 (136) | Missouri State DEF vs Western Kentucky OFF | 284.8 (125) |       |

YARDS / PLAY

|       |           |                                            |           |                                                                                                                                                     |
|-------|-----------|--------------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.90 | 4.6 (117) | Missouri State OFF vs Western Kentucky DEF | 7.5 (134) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 6.5 (118) | Missouri State DEF vs Western Kentucky OFF | 3.7 (135) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| -1.62                                          | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |            |                                            |             |                                                                                                                                  |
|-------|------------|--------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------|
| +9.94 | 66.7 (123) | Missouri State OFF vs Western Kentucky DEF | 100.0 (128) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 79.0 (38)  | Missouri State DEF vs Western Kentucky OFF | 77.8 (103)  |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                            |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 24.3 (128) | Missouri State OFF vs Western Kentucky DEF | 36.4 (48) | -31.4 |
|                                                                                                                   | 56.4 (135) | Missouri State DEF vs Western Kentucky OFF | 35.7 (91) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

## PASSING GAME

### PASS YARDS / GAME

|             |                                            |            |                              |
|-------------|--------------------------------------------|------------|------------------------------|
| 173.7 (111) | Missouri State OFF vs Western Kentucky DEF | 212.0 (55) | +43.2<br>head-to-head +104.3 |
| 301.7 (134) | Missouri State DEF vs Western Kentucky OFF | 188.3 (99) |                              |

### PASS YARDS / ATTEMPT

|                             |           |                                            |           |
|-----------------------------|-----------|--------------------------------------------|-----------|
| +0.86<br>head-to-head +2.00 | 6.5 (98)  | Missouri State OFF vs Western Kentucky DEF | 9.2 (128) |
|                             | 8.8 (118) | Missouri State DEF vs Western Kentucky OFF | 4.9 (138) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attemp edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

### QBR

|            |                                    |            |
|------------|------------------------------------|------------|
| 54.2 (109) | Missouri State vs Western Kentucky | 48.8 (122) |
|------------|------------------------------------|------------|

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

### OFFENSIVE EFFICIENCY

|            |                                            |            |
|------------|--------------------------------------------|------------|
| 30.2 (111) | Missouri State OFF vs Western Kentucky DEF | 31.0 (14)  |
| 42.9 (32)  | Missouri State DEF vs Western Kentucky OFF | 25.6 (119) |

### SACKS ALLOWED / GAME

|                             |            |                                            |            |
|-----------------------------|------------|--------------------------------------------|------------|
| -14.3<br>head-to-head +1.11 | 2.70 (103) | Missouri State OFF vs Western Kentucky DEF | 0.80 (124) |
|                             | 1.00 (109) | Missouri State DEF vs Western Kentucky OFF | 3.0 (113)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

### COMPLETION %

|      |                                    |      |
|------|------------------------------------|------|
| 62.5 | Missouri State vs Western Kentucky | 58.2 |
|------|------------------------------------|------|

### QB RUSH YARDS / GAME

|    |                                    |    |
|----|------------------------------------|----|
| -- | Missouri State vs Western Kentucky | -- |
|----|------------------------------------|----|

### PASSING EXPLOSIVENESS

|                             |           |                                            |            |
|-----------------------------|-----------|--------------------------------------------|------------|
| +0.24<br>head-to-head +0.43 | 1.23 (73) | Missouri State OFF vs Western Kentucky DEF | 1.48 (136) |
|                             | 1.02 (9)  | Missouri State DEF vs Western Kentucky OFF | 1.25 (64)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

### INTERCEPTIONS / GAME

|      |                                            |      |
|------|--------------------------------------------|------|
| 0.70 | Missouri State OFF vs Western Kentucky DEF | --   |
| --   | Missouri State DEF vs Western Kentucky OFF | 1.00 |

## RUSHING GAME

### RUSH YARDS / GAME

|                                    |             |                                            |             |
|------------------------------------|-------------|--------------------------------------------|-------------|
| <b>+42.9</b><br>head-to-head +39.2 | 97.0 (119)  | Missouri State OFF vs Western Kentucky DEF | 249.0 (136) |
|                                    | 210.3 (124) | Missouri State DEF vs Western Kentucky OFF | 96.5 (120)  |

### RUSH YARDS / ATTEMPT

|                                    |           |                                            |            |
|------------------------------------|-----------|--------------------------------------------|------------|
| <b>+1.54</b><br>head-to-head +2.30 | 3.3 (107) | Missouri State OFF vs Western Kentucky DEF | 6.6 (136)  |
|                                    | 4.8 (103) | Missouri State DEF vs Western Kentucky OFF | 2.80 (126) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

### TFL / GAME

|          |                                            |            |
|----------|--------------------------------------------|------------|
| 0.00 (1) | Missouri State OFF vs Western Kentucky DEF | 2.60 (102) |
| 3.0 (92) | Missouri State DEF vs Western Kentucky OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|              |           |                                            |            |                                                                                                                                              |
|--------------|-----------|--------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.48</b> | 2.99 (88) | Missouri State OFF vs Western Kentucky DEF | 3.4 (130)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|              | 3.3 (124) | Missouri State DEF vs Western Kentucky OFF | 2.62 (126) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |            |                                            |            |                                    |
|--|------------|--------------------------------------------|------------|------------------------------------|
|  | 0.71 (86)  | Missouri State OFF vs Western Kentucky DEF | 0.86 (127) | <b>+14.0</b><br>head-to-head +0.65 |
|  | 0.87 (130) | Missouri State DEF vs Western Kentucky OFF | 0.71 (91)  |                                    |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|              |            |                                            |            |                                                                                                                                            |
|--------------|------------|--------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+9.23</b> | 0.16 (55)  | Missouri State OFF vs Western Kentucky DEF | 0.15 (120) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|              | 0.16 (107) | Missouri State DEF vs Western Kentucky OFF | 0.24 (131) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                                    |            |                                            |            |
|------------------------------------|------------|--------------------------------------------|------------|
| <b>+1.13</b><br>head-to-head +1.20 | 0.17 (108) | Missouri State OFF vs Western Kentucky DEF | 0.13 (112) |
|                                    | 0.15 (86)  | Missouri State DEF vs Western Kentucky OFF | 0.16 (97)  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

#### 2ND LEVEL YARDS

|                                    |            |                                            |            |
|------------------------------------|------------|--------------------------------------------|------------|
| <b>+0.10</b><br>head-to-head +0.02 | 0.95 (111) | Missouri State OFF vs Western Kentucky DEF | 1.25 (119) |
|                                    | 1.25 (117) | Missouri State DEF vs Western Kentucky OFF | 0.94 (115) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

#### OPEN FIELD YARDS

|                                    |            |                                            |            |
|------------------------------------|------------|--------------------------------------------|------------|
| <b>+0.75</b><br>head-to-head +1.40 | 0.86 (103) | Missouri State OFF vs Western Kentucky DEF | 2.23 (135) |
|                                    | 1.17 (84)  | Missouri State DEF vs Western Kentucky OFF | 0.53 (127) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

#### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.14 (123) | F+   | -1.28 (125) |
| -0.69 (101) | OF+  | -1.17 (122) |
| -1.41 (129) | DF+  | -1.20 (124) |
| -0.65 (110) | FEI  | -0.81 (123) |
| -0.18 (83)  | OFEI | -0.50 (124) |
| -0.44 (130) | DFEI | -0.26 (104) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

#### NET EFFICIENCY DELTA (THE VEGAS FILTER)

|              |                                                                                                                                                                                                                   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.14</b> | Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home). |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

#### FEI DELTA

|              |                                                                                                                                                                                                                   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.16</b> | Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close. |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|             |                         |             |
|-------------|-------------------------|-------------|
| -0.34 (131) | NET SUCCESS RATE        | -0.48 (137) |
| 0.31 (111)  | OFF SUCCESS RATE (OSR)  | 0.12 (138)  |
| 0.64 (132)  | OPP SUCCESS RATE (DSR)  | 0.60 (126)  |
| 0.40 (108)  | OFF SUCCESS RATE (CFBD) | 0.37 (125)  |
| 0.52 (138)  | DEF SUCCESS RATE (CFBD) | 0.43 (95)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

#### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

+0.15

| 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE) |  |
|-------------------------------------------------|--|
| +0.06                                           |  |
| head-to-head +0.15                              |  |

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |             |
|------------|-----------------|-------------|
| 0.10 (89)  | OFF PPA         | -0.04 (127) |
| 0.23 (126) | DEF PPA ALLOWED | 0.24 (130)  |

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

| PASSING DOWN PANIC INDEX (PPA) |  |
|--------------------------------|--|
| +0.12                          |  |
| head-to-head +0.15             |  |

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI -2.5

349.0 (85)

YARDS / PLAY

+0.20

4.8 (109)

S Florida OFF vs UTSA DEF

5.3 (57)

Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.

4.7 (23)

S Florida DEF vs UTSA OFF

5.2 (77)

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+11.8

+9.30

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

+1.44

100.0 (1)

S Florida OFF vs UTSA DEF

81.2 (47)

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.

87.5 (75)

S Florida DEF vs UTSA OFF

92.3 (31)

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+13.1

42.9 (48)

S Florida OFF vs UTSA DEF

37.5 (52)

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.

34.5 (37)

S Florida DEF vs UTSA OFF

32.8 (107)

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASS YARDS / ATTEMPT

|                    |          |                           |           |
|--------------------|----------|---------------------------|-----------|
| <b>-1.64</b>       | 6.8 (88) | S Florida OFF vs UTSA DEF | 6.4 (32)  |
| head-to-head +0.80 | 6.2 (24) | S Florida DEF vs UTSA OFF | 6.2 (110) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                   |            |
|-----------|-------------------|------------|
| 62.7 (82) | S Florida vs UTSA | 53.6 (111) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                           |           |
|----------------------|---------------------------|-----------|
| 43.8 (78)            | S Florida OFF vs UTSA DEF | 62.9 (80) |
| 50.8 (52)            | S Florida DEF vs UTSA OFF | 45.3 (77) |

| SACKS ALLOWED / GAME |           |                           |            |
|----------------------|-----------|---------------------------|------------|
| <b>-10.3</b>         | 2.00 (77) | S Florida OFF vs UTSA DEF | 1.30 (100) |
| head-to-head +0.28   | 2.00 (60) | S Florida DEF vs UTSA OFF | 1.00 (15)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                   |      |
|--------------|-------------------|------|
| 59.3         | S Florida vs UTSA | 65.6 |

| QB RUSH YARDS / GAME |                   |    |
|----------------------|-------------------|----|
| --                   | S Florida vs UTSA | -- |

| PASSING EXPLOSIVENESS |            |                           |           |
|-----------------------|------------|---------------------------|-----------|
| <b>-0.20</b>          | 1.11 (124) | S Florida OFF vs UTSA DEF | 1.15 (39) |
| head-to-head +0.10    | 0.99 (3)   | S Florida DEF vs UTSA OFF | 1.17 (99) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                           |      |
|----------------------|---------------------------|------|
| 0.00                 | S Florida OFF vs UTSA DEF | --   |
| --                   | S Florida DEF vs UTSA OFF | 0.50 |

## RUSHING GAME

| RUSH YARDS / GAME  |            |                           |             |
|--------------------|------------|---------------------------|-------------|
| <b>+30.4</b>       | 128.5 (83) | S Florida OFF vs UTSA DEF | 205.0 (120) |
| head-to-head +37.7 | 141.5 (56) | S Florida DEF vs UTSA OFF | 154.3 (63)  |

| RUSH YARDS / ATTEMPT |          |                           |                                    |
|----------------------|----------|---------------------------|------------------------------------|
|                      | 3.7 (93) | S Florida OFF vs UTSA DEF | 4.6 (87)                           |
|                      | 3.9 (48) | S Florida DEF vs UTSA OFF | 4.4 (54)                           |
|                      |          |                           | <b>-0.06</b><br>head-to-head +0.00 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                           |          |
|------------|---------------------------|----------|
| 0.00 (1)   | S Florida OFF vs UTSA DEF | 3.2 (90) |
| 6.0 (9)    | S Florida DEF vs UTSA OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |           |                           |           |                                                                                                                                              |
|-------|-----------|---------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.48 | 3.0 (84)  | S Florida OFF vs UTSA DEF | 3.0 (96)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 2.61 (30) | S Florida DEF vs UTSA OFF | 2.96 (94) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|                             |           |                           |           |
|-----------------------------|-----------|---------------------------|-----------|
| +9.24<br>head-to-head +12.8 | 0.86 (7)  | S Florida OFF vs UTSA DEF | 0.67 (36) |
|                             | 0.56 (12) | S Florida DEF vs UTSA OFF | 0.84 (15) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|       |            |                           |            |                                                                                                                                            |
|-------|------------|---------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +8.54 | 0.20 (101) | S Florida OFF vs UTSA DEF | 0.16 (104) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|       | 0.25 (12)  | S Florida DEF vs UTSA OFF | 0.19 (93)  |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                             |           |                           |           |
|-----------------------------|-----------|---------------------------|-----------|
| +4.13<br>head-to-head +4.50 | 0.13 (35) | S Florida OFF vs UTSA DEF | 0.14 (98) |
|                             | 0.18 (45) | S Florida DEF vs UTSA OFF | 0.13 (50) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                             |           |                           |           |
|-----------------------------|-----------|---------------------------|-----------|
| +0.11<br>head-to-head +0.24 | 1.25 (37) | S Florida OFF vs UTSA DEF | 0.97 (67) |
|                             | 0.92 (49) | S Florida DEF vs UTSA OFF | 1.06 (85) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                             |           |                           |           |
|-----------------------------|-----------|---------------------------|-----------|
| +0.35<br>head-to-head +0.15 | 1.38 (55) | S Florida OFF vs UTSA DEF | 1.31 (98) |
|                             | 0.91 (61) | S Florida DEF vs UTSA OFF | 1.63 (35) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |            |
|------------|------|------------|
| -0.02 (67) | F+   | -0.11 (71) |
| -0.18 (80) | OF+  | 0.01 (70)  |
| 0.24 (55)  | DF+  | -0.16 (78) |
| -0.10 (72) | FEI  | -0.10 (72) |
| -0.17 (80) | OFEI | -0.07 (68) |
| 0.12 (51)  | DFEI | 0.01 (65)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.01**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.00**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.15 (34) | NET SUCCESS RATE        | 0.03 (62) |
| 0.44 (64) | OFF SUCCESS RATE (OSR)  | 0.49 (43) |
| 0.29 (19) | OPP SUCCESS RATE (DSR)  | 0.46 (83) |
| 0.49 (24) | OFF SUCCESS RATE (CFBD) | 0.45 (56) |
| 0.40 (66) | DEF SUCCESS RATE (CFBD) | 0.41 (84) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.12**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.05**

head-to-head +0.12

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.18 (59)  | OFF PPA         | 0.22 (48) |
| -0.01 (46) | DEF PPA ALLOWED | 0.04 (61) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.01**

head-to-head +0.02

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|--------|-------------|-------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +108.4 | 465.0 (17)  | S Alabama OFF vs Arkansas State DEF | 438.0 (112) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|        | 456.8 (123) | S Alabama DEF vs Arkansas State OFF | 337.8 (94)  |                                                                                                                                                      |

YARDS / PLAY

|       |           |                                     |           |                                                                                                                                                     |
|-------|-----------|-------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +0.40 | 6.5 (18)  | S Alabama OFF vs Arkansas State DEF | 6.8 (124) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 7.2 (132) | S Alabama DEF vs Arkansas State OFF | 5.7 (55)  |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| +16.3                                          | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                     |            |                                                                                                                                  |
|-------|-----------|-------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +7.30 | 80.0 (94) | S Alabama OFF vs Arkansas State DEF | 93.3 (118) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 84.2 (60) | S Alabama DEF vs Arkansas State OFF | 81.8 (86)  |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                     |            |                                                                                                                   |
|-------|-----------|-------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +16.2 | 47.5 (25) | S Alabama OFF vs Arkansas State DEF | 52.2 (133) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 40.9 (81) | S Alabama DEF vs Arkansas State OFF | 42.5 (51)  |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                             |            |                                     |            |
|-----------------------------|------------|-------------------------------------|------------|
| +31.5<br>head-to-head +5.00 | 268.8 (30) | S Alabama OFF vs Arkansas State DEF | 209.5 (53) |
|                             | 246.3 (90) | S Alabama DEF vs Arkansas State OFF | 227.0 (65) |

| PASS YARDS / ATTEMPT               |          |                                     |           |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attemp edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                             |           |
|-----------|-----------------------------|-----------|
| 76.3 (52) | S Alabama vs Arkansas State | 64.1 (74) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                     |           |
|----------------------|-------------------------------------|-----------|
| 51.9 (63)            | S Alabama OFF vs Arkansas State DEF | 41.3 (31) |
| 26.9 (10)            | S Alabama DEF vs Arkansas State OFF | 46.6 (75) |

| SACKS ALLOWED / GAME               |           |                                     |            |
|------------------------------------|-----------|-------------------------------------|------------|
| <b>-12.4</b><br>head-to-head +0.10 | 1.50 (42) | S Alabama OFF vs Arkansas State DEF | 0.50 (131) |
|                                    | 1.80 (74) | S Alabama DEF vs Arkansas State OFF | 1.50 (42)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                             |      |
|--------------|-----------------------------|------|
| 63.2         | S Alabama vs Arkansas State | 65.5 |

| QB RUSH YARDS / GAME |                             |    |
|----------------------|-----------------------------|----|
| --                   | S Alabama vs Arkansas State | -- |

| PASSING EXPLOSIVENESS |            |                                     |            |                                    |
|-----------------------|------------|-------------------------------------|------------|------------------------------------|
|                       | 1.32 (29)  | S Alabama OFF vs Arkansas State DEF | 1.16 (43)  | <b>+0.11</b><br>head-to-head +0.10 |
|                       | 1.42 (127) | S Alabama DEF vs Arkansas State OFF | 1.15 (107) |                                    |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                     |      |
|----------------------|-------------------------------------|------|
| 0.50                 | S Alabama OFF vs Arkansas State DEF | --   |
| --                   | S Alabama DEF vs Arkansas State OFF | 1.00 |

| RUSHING GAME                         |             |                                     |             |
|--------------------------------------|-------------|-------------------------------------|-------------|
| RUSH YARDS / GAME                    |             |                                     |             |
| <b>+121.7</b><br>head-to-head +103.5 | 196.3 (29)  | S Alabama OFF vs Arkansas State DEF | 228.5 (131) |
|                                      | 210.5 (125) | S Alabama DEF vs Arkansas State OFF | 110.8 (104) |

| RUSH YARDS / ATTEMPT |           |                                     |           |                                    |
|----------------------|-----------|-------------------------------------|-----------|------------------------------------|
|                      | 4.7 (40)  | S Alabama OFF vs Arkansas State DEF | 5.5 (125) | <b>+2.14</b><br>head-to-head +0.30 |
|                      | 6.6 (136) | S Alabama DEF vs Arkansas State OFF | 3.9 (83)  |                                    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attemp edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                     |            |
|------------|-------------------------------------|------------|
| 0.00 (1)   | S Alabama OFF vs Arkansas State DEF | 1.80 (113) |
| 2.60 (102) | S Alabama DEF vs Arkansas State OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                     |           |
|------------|-----------|-------------------------------------|-----------|
| +0.31      | 3.2 (51)  | S Alabama OFF vs Arkansas State DEF | 3.5 (135) |
|            | 3.1 (105) | S Alabama DEF vs Arkansas State OFF | 3.3 (39)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +18.2<br>head-to-head +26.4 | 0.81 (27) | S Alabama OFF vs Arkansas State DEF | 0.81 (111) |
|                             | 0.64 (31) | S Alabama DEF vs Arkansas State OFF | 0.72 (84)  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                     |            |
|------------|-----------|-------------------------------------|------------|
| +9.11      | 0.12 (16) | S Alabama OFF vs Arkansas State DEF | 0.13 (132) |
|            | 0.18 (82) | S Alabama DEF vs Arkansas State OFF | 0.16 (53)  |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +5.83<br>head-to-head +8.50 | 0.13 (49) | S Alabama OFF vs Arkansas State DEF | 0.12 (131) |
|                             | 0.18 (36) | S Alabama DEF vs Arkansas State OFF | 0.15 (86)  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                     |            |
|-----------------|------------|-------------------------------------|------------|
|                 | 1.07 (79)  | S Alabama OFF vs Arkansas State DEF | 1.25 (120) |
|                 | 1.32 (130) | S Alabama DEF vs Arkansas State OFF | 1.16 (58)  |

+0.38  
head-to-head +0.16

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                     |           |
|------------------|------------|-------------------------------------|-----------|
|                  | 0.87 (100) | S Alabama OFF vs Arkansas State DEF | 1.30 (96) |
|                  | 2.99 (138) | S Alabama DEF vs Arkansas State OFF | 0.95 (95) |

+1.59  
head-to-head +1.77

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.83 (106) | F+   | -0.83 (106) |
| 0.12 (62)   | OF+  | -0.55 (96)  |
| -1.69 (133) | DF+  | -1.05 (121) |
| -0.45 (98)  | FEI  | -0.65 (110) |
| 0.02 (55)   | OFEI | -0.30 (100) |
| -0.46 (131) | DFEI | -0.36 (126) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.22**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.20**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |            |
|------------|-------------------------|------------|
| -0.01 (71) | NET SUCCESS RATE        | -0.10 (93) |
| 0.52 (31)  | OFF SUCCESS RATE (OSR)  | 0.39 (83)  |
| 0.54 (111) | OPP SUCCESS RATE (DSR)  | 0.49 (95)  |
| 0.43 (75)  | OFF SUCCESS RATE (CFBD) | 0.47 (38)  |
| 0.48 (130) | DEF SUCCESS RATE (CFBD) | 0.48 (128) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.09**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.16**

head-to-head +0.08

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.21 (49)  | OFF PPA         | 0.15 (71)  |
| 0.27 (132) | DEF PPA ALLOWED | 0.19 (118) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.20**

head-to-head +0.02

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|-------|-----------|-------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +7.50 | 33.0 (35) | Florida State OFF vs Louisville DEF | 33.3 (109) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 25.3 (59) | Florida State DEF vs Louisville OFF | 33.5 (28)  |                                                                                                                                                                    |

YARDS / GAME

|       |            |                                     |             |                                                                                                                                                      |
|-------|------------|-------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +17.2 | 419.5 (40) | Florida State OFF vs Louisville DEF | 465.5 (129) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|       | 419.0 (99) | Florida State DEF vs Louisville OFF | 448.8 (24)  |                                                                                                                                                      |

YARDS / PLAY

|                                                                                                                                                     |          |                                     |           |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------------------|-----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 6.1 (35) | Florida State OFF vs Louisville DEF | 6.0 (102) | -0.50 |
|                                                                                                                                                     | 5.9 (91) | Florida State DEF vs Louisville OFF | 6.7 (9)   |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +9.86                                          | +19.0 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                     |            |                                                                                                                                  |
|-------|-----------|-------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +33.5 | 100.0 (1) | Florida State OFF vs Louisville DEF | 81.2 (47)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 75.0 (24) | Florida State DEF vs Louisville OFF | 72.7 (116) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                     |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 42.9 (48)  | Florida State OFF vs Louisville DEF | 38.6 (60) | -3.64 |
|                                                                                                                   | 43.1 (101) | Florida State DEF vs Louisville OFF | 42.0 (54) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|             |                                     |             |                              |
|-------------|-------------------------------------|-------------|------------------------------|
| 221.8 (67)  | Florida State OFF vs Louisville DEF | 289.0 (124) | +116.2<br>head-to-head +52.2 |
| 297.5 (130) | Florida State DEF vs Louisville OFF | 265.5 (35)  |                              |

| PASS YARDS / ATTEMPT               |           |                                     |           |
|------------------------------------|-----------|-------------------------------------|-----------|
| <b>+3.06</b><br>head-to-head +0.50 | 9.1 (13)  | Florida State OFF vs Louisville DEF | 8.8 (118) |
|                                    | 8.4 (107) | Florida State DEF vs Louisville OFF | 9.0 (18)  |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                             |           |
|-----------|-----------------------------|-----------|
| 82.4 (28) | Florida State vs Louisville | 80.8 (35) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                     |           |
|----------------------|-------------------------------------|-----------|
| 77.6 (16)            | Florida State OFF vs Louisville DEF | 56.4 (66) |
| 48.6 (49)            | Florida State DEF vs Louisville OFF | 76.7 (18) |

| SACKS ALLOWED / GAME |                                     |           |                                    |  |
|----------------------|-------------------------------------|-----------|------------------------------------|--|
| 2.80 (104)           | Florida State OFF vs Louisville DEF | 1.80 (74) | <b>-11.2</b><br>head-to-head +0.08 |  |
| 3.5 (6)              | Florida State DEF vs Louisville OFF | 2.50 (98) |                                    |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                             |      |
|--------------|-----------------------------|------|
| 59.2         | Florida State vs Louisville | 67.8 |

| QB RUSH YARDS / GAME |                             |    |
|----------------------|-----------------------------|----|
| --                   | Florida State vs Louisville | -- |

| PASSING EXPLOSIVENESS              |           |                                     |           |
|------------------------------------|-----------|-------------------------------------|-----------|
| <b>+0.25</b><br>head-to-head +0.06 | 1.44 (5)  | Florida State OFF vs Louisville DEF | 1.28 (91) |
|                                    | 1.28 (92) | Florida State DEF vs Louisville OFF | 1.38 (13) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                     |      |
|----------------------|-------------------------------------|------|
| 1.30                 | Florida State OFF vs Louisville DEF | --   |
| --                   | Florida State DEF vs Louisville OFF | 0.30 |

| RUSHING GAME                                   |            |                                     |            |  |                                                |
|------------------------------------------------|------------|-------------------------------------|------------|--|------------------------------------------------|
| RUSH YARDS / GAME                              |            |                                     |            |  |                                                |
| <div>+71.2</div> <div>head-to-head +69.5</div> | 197.8 (28) | Florida State OFF vs Louisville DEF | 176.5 (99) |  |                                                |
|                                                | 121.5 (40) | Florida State DEF vs Louisville OFF | 183.3 (39) |  |                                                |
| RUSH YARDS / ATTEMPT                           |            |                                     |            |  |                                                |
|                                                | 4.8 (36)   | Florida State OFF vs Louisville DEF | 4.1 (56)   |  | <div>+0.64</div> <div>head-to-head +0.10</div> |
|                                                | 3.7 (40)   | Florida State DEF vs Louisville OFF | 5.3 (14)   |  |                                                |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                     |            |
|------------|-------------------------------------|------------|
| 0.00 (1)   | Florida State OFF vs Louisville DEF | 2.60 (102) |
| 6.4 (6)    | Florida State DEF vs Louisville OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                     |            |                                                                                                                                              |
|------------|-----------|-------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.51      | 3.4 (27)  | Florida State OFF vs Louisville DEF | 2.94 (85)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|            | 2.97 (90) | Florida State DEF vs Louisville OFF | 2.87 (105) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                     |            |                             |
|--------------------|------------|-------------------------------------|------------|-----------------------------|
|                    | 0.62 (119) | Florida State OFF vs Louisville DEF | 0.58 (15)  | +3.18<br>head-to-head +26.9 |
|                    | 0.83 (119) | Florida State DEF vs Louisville OFF | 0.64 (113) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                     |            |                                                                                                                                            |
|------------|-----------|-------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +14.1      | 0.14 (33) | Florida State OFF vs Louisville DEF | 0.12 (134) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|            | 0.19 (74) | Florida State DEF vs Louisville OFF | 0.20 (111) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                     |            |  |
|-----------------------------|-----------|-------------------------------------|------------|--|
| +3.43<br>head-to-head +6.70 | 0.14 (61) | Florida State OFF vs Louisville DEF | 0.13 (107) |  |
|                             | 0.17 (52) | Florida State DEF vs Louisville OFF | 0.17 (109) |  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |           |                                     |           |                             |
|-----------------|-----------|-------------------------------------|-----------|-----------------------------|
|                 | 1.22 (47) | Florida State OFF vs Louisville DEF | 0.87 (35) | +0.11<br>head-to-head +0.12 |
|                 | 0.96 (62) | Florida State DEF vs Louisville OFF | 1.26 (36) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |           |                                     |           |                             |
|------------------|-----------|-------------------------------------|-----------|-----------------------------|
|                  | 1.66 (33) | Florida State OFF vs Louisville DEF | 0.64 (31) | +1.15<br>head-to-head +1.20 |
|                  | 0.90 (58) | Florida State DEF vs Louisville OFF | 2.59 (3)  |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.83 (32) | F+   | 0.78 (35) |
| 1.19 (15) | OF+  | 1.08 (19) |
| 0.27 (53) | DF+  | 0.35 (49) |
| 0.55 (28) | FEI  | 0.45 (39) |
| 0.41 (13) | OFEI | 0.22 (31) |
| 0.09 (56) | DFEI | 0.23 (36) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.05**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.10**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |            |
|------------|-------------------------|------------|
| -0.01 (70) | NET SUCCESS RATE        | -0.03 (76) |
| 0.46 (58)  | OFF SUCCESS RATE (OSR)  | 0.50 (38)  |
| 0.46 (85)  | OPP SUCCESS RATE (DSR)  | 0.53 (109) |
| 0.45 (61)  | OFF SUCCESS RATE (CFBD) | 0.50 (18)  |
| 0.40 (78)  | DEF SUCCESS RATE (CFBD) | 0.40 (71)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.02**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.14**

head-to-head +0.02

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.26 (30) | OFF PPA         | 0.33 (14)  |
| 0.11 (90) | DEF PPA ALLOWED | 0.14 (100) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.22**

head-to-head +0.03

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                            |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 63.3 | iowa OFF vs Washington DEF | 63.3 | -1.50 |
|                                                                                                                                                 | 65.3 | iowa DEF vs Washington OFF | 66.8 |       |

POINTS / GAME

|       |           |                            |           |                                                                                                                                                                    |
|-------|-----------|----------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +4.40 | 22.5 (82) | iowa OFF vs Washington DEF | 19.0 (32) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 15.8 (13) | iowa DEF vs Washington OFF | 21.3 (91) |                                                                                                                                                                    |

YARDS / GAME

|                                                                                                                                                      |             |                            |            |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------------------|------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 328.5 (103) | iowa OFF vs Washington DEF | 300.5 (24) | -32.0 |
|                                                                                                                                                      | 322.0 (34)  | iowa DEF vs Washington OFF | 339.0 (91) |       |

YARDS / PLAY

|       |          |                            |          |                                                                                                                                                     |
|-------|----------|----------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +0.00 | 5.2 (77) | iowa OFF vs Washington DEF | 4.8 (31) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 4.9 (34) | iowa DEF vs Washington OFF | 5.1 (87) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +10.9                                          | +5.74 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                            |           |                                                                                                                                  |
|-------|-----------|----------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +22.2 | 81.8 (86) | iowa OFF vs Washington DEF | 90.9 (99) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 69.2 (12) | iowa DEF vs Washington OFF | 81.2 (91) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                            |            |                                                                                                                   |
|-------|-----------|----------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +11.5 | 40.7 (63) | iowa OFF vs Washington DEF | 30.0 (17)  | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 35.7 (43) | iowa DEF vs Washington OFF | 23.5 (130) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |            |                            |            |                             |
|--|------------|----------------------------|------------|-----------------------------|
|  | 208.8 (83) | iowa OFF vs Washington DEF | 196.8 (38) | +0.49<br>head-to-head +41.7 |
|  | 207.5 (45) | iowa DEF vs Washington OFF | 239.8 (53) |                             |

| PASS YARDS / ATTEMPT |           |                            |          |                             |
|----------------------|-----------|----------------------------|----------|-----------------------------|
|                      | 6.1 (114) | Iowa OFF vs Washington DEF | 6.7 (44) | +0.96<br>head-to-head +3.00 |
|                      | 8.5 (111) | Iowa DEF vs Washington OFF | 7.3 (68) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                    |           |
|-----------|--------------------|-----------|
| 62.6 (83) | Iowa vs Washington | 61.7 (88) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                            |           |
|----------------------|----------------------------|-----------|
| 54.6 (58)            | Iowa OFF vs Washington DEF | 65.4 (88) |
| 84.9 (130)           | Iowa DEF vs Washington OFF | 39.7 (88) |

| SACKS ALLOWED / GAME |           |                            |           |                             |
|----------------------|-----------|----------------------------|-----------|-----------------------------|
|                      | 1.00 (15) | Iowa OFF vs Washington DEF | 2.00 (60) | -7.92<br>head-to-head +1.27 |
|                      | 2.80 (23) | Iowa DEF vs Washington OFF | 3.5 (128) |                             |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                    |      |
|--------------|--------------------|------|
| 58.4         | Iowa vs Washington | 64.1 |

| QB RUSH YARDS / GAME |                    |    |
|----------------------|--------------------|----|
| --                   | Iowa vs Washington | -- |

| PASSING EXPLOSIVENESS       |           |                            |           |  |
|-----------------------------|-----------|----------------------------|-----------|--|
| -0.05<br>head-to-head +0.11 | 1.25 (67) | Iowa OFF vs Washington DEF | 1.17 (47) |  |
|                             | 1.09 (21) | Iowa DEF vs Washington OFF | 1.21 (79) |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                            |      |
|----------------------|----------------------------|------|
| 0.50                 | Iowa OFF vs Washington DEF | --   |
| --                   | Iowa DEF vs Washington OFF | 0.50 |

## RUSHING GAME

| RUSH YARDS / GAME           |            |                            |            |  |
|-----------------------------|------------|----------------------------|------------|--|
| -79.5<br>head-to-head +9.80 | 119.8 (94) | Iowa OFF vs Washington DEF | 103.8 (23) |  |
|                             | 114.5 (31) | Iowa DEF vs Washington OFF | 99.3 (116) |  |

| RUSH YARDS / ATTEMPT        |          |                            |           |  |
|-----------------------------|----------|----------------------------|-----------|--|
| -0.86<br>head-to-head +1.20 | 4.3 (62) | Iowa OFF vs Washington DEF | 3.2 (22)  |  |
|                             | 3.0 (17) | Iowa DEF vs Washington OFF | 3.3 (107) |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                            |          |
|------------|----------------------------|----------|
| 0.00 (1)   | Iowa OFF vs Washington DEF | 5.8 (11) |
| 3.8 (71)   | Iowa DEF vs Washington OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                            |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.3 (46)  | Iowa OFF vs Washington DEF | 2.36 (15) | -0.09 |
|                                                                                                                                              | 2.70 (49) | Iowa DEF vs Washington OFF | 3.0 (83)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                            |            |                             |
|--------------------|------------|----------------------------|------------|-----------------------------|
|                    | 0.58 (128) | Iowa OFF vs Washington DEF | 0.50 (7)   | -3.03<br>head-to-head +32.9 |
|                    | 0.76 (98)  | Iowa DEF vs Washington OFF | 0.64 (110) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                            |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.15 (43) | Iowa OFF vs Washington DEF | 0.29 (4)  | -6.66 |
|                                                                                                                                            | 0.19 (75) | Iowa DEF vs Washington OFF | 0.18 (82) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                            |           |  |
|-----------------------------|-----------|----------------------------|-----------|--|
| +1.33<br>head-to-head +0.90 | 0.11 (19) | Iowa OFF vs Washington DEF | 0.18 (32) |  |
|                             | 0.17 (58) | Iowa DEF vs Washington OFF | 0.14 (52) |  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                            |            |  |
|-----------------------------|-----------|----------------------------|------------|--|
| +0.01<br>head-to-head +0.60 | 1.28 (31) | Iowa OFF vs Washington DEF | 0.83 (30)  |  |
|                             | 0.57 (3)  | Iowa DEF vs Washington OFF | 0.94 (114) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                            |           |  |
|-----------------------------|-----------|----------------------------|-----------|--|
| +0.58<br>head-to-head +1.38 | 2.07 (12) | Iowa OFF vs Washington DEF | 0.85 (50) |  |
|                             | 0.29 (5)  | Iowa DEF vs Washington OFF | 1.26 (69) |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |           |
|------------|------|-----------|
| 0.93 (23)  | F+   | 0.78 (35) |
| -0.05 (72) | OF+  | 0.29 (52) |
| 1.58 (11)  | DF+  | 1.15 (19) |
| 0.68 (18)  | FEI  | 0.51 (31) |
| -0.11 (74) | OFEI | 0.05 (53) |
| 0.61 (8)   | DFEI | 0.42 (18) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.03**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.17**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.11 (43) | NET SUCCESS RATE        | 0.04 (60) |
| 0.41 (78) | OFF SUCCESS RATE (OSR)  | 0.36 (92) |
| 0.30 (23) | OPP SUCCESS RATE (DSR)  | 0.33 (36) |
| 0.43 (84) | OFF SUCCESS RATE (CFBD) | 0.43 (77) |
| 0.34 (21) | DEF SUCCESS RATE (CFBD) | 0.36 (38) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.07**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**-0.11**

head-to-head +0.07

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.13 (78)  | OFF PPA         | 0.13 (81)  |
| -0.06 (24) | DEF PPA ALLOWED | -0.08 (18) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**-0.15**

head-to-head +0.01

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN                                                                                                                                                          |             |                                     |             |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------------------------------|-------------|-------|
| PLAYS / GAME                                                                                                                                                       |             |                                     |             |       |
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.                    | 62.5        | Washington St OFF vs Utah State DEF | 73.5        | -0.80 |
|                                                                                                                                                                    | 71.0        | Washington St DEF vs Utah State OFF | 60.8        |       |
| POINTS / GAME                                                                                                                                                      |             |                                     |             |       |
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 11.8 (130)  | Washington St OFF vs Utah State DEF | 24.0 (53)   | -7.00 |
|                                                                                                                                                                    | 29.5 (85)   | Washington St DEF vs Utah State OFF | 13.3 (126)  |       |
| YARDS / GAME                                                                                                                                                       |             |                                     |             |       |
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               | 231.3 (136) | Washington St OFF vs Utah State DEF | 415.0 (98)  | -85.8 |
|                                                                                                                                                                    | 427.8 (107) | Washington St DEF vs Utah State OFF | 304.3 (114) |       |
| YARDS / PLAY                                                                                                                                                       |             |                                     |             |       |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 3.7 (135)   | Washington St OFF vs Utah State DEF | 5.6 (70)    | -1.70 |
|                                                                                                                                                                    | 6.0 (102)   | Washington St DEF vs Utah State OFF | 5.0 (92)    |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| +6.17                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | +1.81 |
| <b>THE FRAUD INDEX &amp; FRAUD GAP (POINTS VS. YARDS):</b> Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE % |            |                                     |            |                                                                                                                                  |
|------------|------------|-------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +7.22      | 66.7 (123) | Washington St OFF vs Utah State DEF | 81.8 (52)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 85.7 (67)  | Washington St DEF vs Utah State OFF | 55.6 (133) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                     |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 20.0 (135) | Washington St OFF vs Utah State DEF | 46.7 (114) | -13.6 |
|                                                                                                                   | 45.0 (110) | Washington St DEF vs Utah State OFF | 35.3 (93)  |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |             |                                     |             |                             |
|-------------------|-------------|-------------------------------------|-------------|-----------------------------|
| PASS YARDS / GAME |             |                                     |             |                             |
|                   | 150.0 (126) | Washington St OFF vs Utah State DEF | 251.3 (99)  | -10.3<br>head-to-head +35.2 |
|                   | 250.5 (97)  | Washington St DEF vs Utah State OFF | 186.0 (101) |                             |

| PASS YARDS / ATTEMPT |           |                                     |          |                    |
|----------------------|-----------|-------------------------------------|----------|--------------------|
|                      | 5.0 (137) | Washington St OFF vs Utah State DEF | 6.8 (49) | -0.84              |
|                      | 7.3 (65)  | Washington St DEF vs Utah State OFF | 6.7 (91) | head-to-head +2.20 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                             |            |
|------------|-----------------------------|------------|
| 38.7 (130) | Washington St vs Utah State | 52.0 (116) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                     |            |
|----------------------|-------------------------------------|------------|
| 20.1 (126)           | Washington St OFF vs Utah State DEF | 59.0 (74)  |
| 60.5 (75)            | Washington St DEF vs Utah State OFF | 23.3 (121) |

| SACKS ALLOWED / GAME |            |                                     |            |  |
|----------------------|------------|-------------------------------------|------------|--|
| -17.7                | 3.8 (132)  | Washington St OFF vs Utah State DEF | 1.00 (109) |  |
| head-to-head +0.80   | 1.00 (109) | Washington St DEF vs Utah State OFF | 3.5 (128)  |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                             |      |
|--------------|-----------------------------|------|
| 58.3         | Washington St vs Utah State | 57.7 |

| QB RUSH YARDS / GAME |                             |    |
|----------------------|-----------------------------|----|
| --                   | Washington St vs Utah State | -- |

| PASSING EXPLOSIVENESS |           |                                     |           |                    |
|-----------------------|-----------|-------------------------------------|-----------|--------------------|
|                       | 1.23 (72) | Washington St OFF vs Utah State DEF | 1.18 (51) | +0.11              |
|                       | 1.20 (62) | Washington St DEF vs Utah State OFF | 1.38 (14) | head-to-head +0.16 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                     |      |
|----------------------|-------------------------------------|------|
| 1.00                 | Washington St OFF vs Utah State DEF | --   |
| --                   | Washington St DEF vs Utah State OFF | 1.50 |

## RUSHING GAME

| RUSH YARDS / GAME |             |                                     |            |                    |
|-------------------|-------------|-------------------------------------|------------|--------------------|
|                   | 81.3 (132)  | Washington St OFF vs Utah State DEF | 163.8 (81) | -7.49              |
|                   | 177.3 (100) | Washington St DEF vs Utah State OFF | 118.3 (95) | head-to-head +50.5 |

| RUSH YARDS / ATTEMPT |            |                                     |          |                    |
|----------------------|------------|-------------------------------------|----------|--------------------|
|                      | 2.80 (126) | Washington St OFF vs Utah State DEF | 4.6 (87) | +0.64              |
|                      | 5.0 (110)  | Washington St DEF vs Utah State OFF | 4.0 (78) | head-to-head +1.60 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                     |          |
|------------|-------------------------------------|----------|
| 0.00 (1)   | Washington St OFF vs Utah State DEF | 3.4 (85) |
| 2.80 (96)  | Washington St DEF vs Utah State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |            |                                     |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.73 (120) | Washington St OFF vs Utah State DEF | 2.75 (55) | -0.40 |
|                                                                                                                                              | 2.83 (68)  | Washington St DEF vs Utah State OFF | 3.1 (74)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |            |                                     |            |  |
|-----------------------------|------------|-------------------------------------|------------|--|
| -10.6<br>head-to-head +26.3 | 0.57 (129) | Washington St OFF vs Utah State DEF | 0.76 (95)  |  |
|                             | 0.68 (52)  | Washington St DEF vs Utah State OFF | 0.38 (137) |  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                     |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.24 (129) | Washington St OFF vs Utah State DEF | 0.19 (77)  | -1.69 |
|                                                                                                                                            | 0.20 (66)  | Washington St DEF vs Utah State OFF | 0.21 (122) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                     |            |                             |
|------------|------------|-------------------------------------|------------|-----------------------------|
|            | 0.20 (134) | Washington St OFF vs Utah State DEF | 0.13 (112) | -1.37<br>head-to-head +0.90 |
|            | 0.13 (114) | Washington St DEF vs Utah State OFF | 0.19 (130) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                     |           |  |
|-----------------------------|-----------|-------------------------------------|-----------|--|
| +0.07<br>head-to-head +0.04 | 1.23 (42) | Washington St OFF vs Utah State DEF | 0.94 (55) |  |
|                             | 1.06 (94) | Washington St DEF vs Utah State OFF | 1.07 (79) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                     |           |                             |
|------------------|------------|-------------------------------------|-----------|-----------------------------|
|                  | 1.37 (56)  | Washington St OFF vs Utah State DEF | 1.24 (90) | +0.69<br>head-to-head +0.43 |
|                  | 1.43 (107) | Washington St DEF vs Utah State OFF | 1.61 (36) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.50 (93)  | F+   | -0.52 (95)  |
| -1.01 (113) | OF+  | -0.71 (102) |
| 0.14 (59)   | DF+  | -0.19 (81)  |
| -0.09 (70)  | FEI  | -0.17 (76)  |
| -0.29 (99)  | OFEI | -0.15 (79)  |
| 0.19 (43)   | DFEI | -0.01 (71)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.06**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.08**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|             |                         |             |
|-------------|-------------------------|-------------|
| -0.32 (126) | NET SUCCESS RATE        | -0.27 (123) |
| 0.24 (124)  | OFF SUCCESS RATE (OSR)  | 0.22 (128)  |
| 0.57 (121)  | OPP SUCCESS RATE (DSR)  | 0.49 (96)   |
| 0.34 (136)  | OFF SUCCESS RATE (CFBD) | 0.35 (129)  |
| 0.41 (80)   | DEF SUCCESS RATE (CFBD) | 0.41 (87)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.06**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**-0.06**

head-to-head +0.06

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|             |                 |             |
|-------------|-----------------|-------------|
| -0.12 (135) | OFF PPA         | -0.07 (132) |
| 0.03 (58)   | DEF PPA ALLOWED | 0.07 (76)   |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**-0.25**

head-to-head +0.01

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                   |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 57.5 | Wyoming OFF vs San Jose State DEF | 70.3 | -12.5 |
|                                                                                                                                                 | 68.8 | Wyoming DEF vs San Jose State OFF | 68.5 |       |

POINTS / GAME

|                                                                                                                                                                    |            |                                   |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------|-----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 12.5 (128) | Wyoming OFF vs San Jose State DEF | 26.3 (70) | -6.30 |
|                                                                                                                                                                    | 24.3 (56)  | Wyoming DEF vs San Jose State OFF | 20.8 (96) |       |

YARDS / GAME

|                                                                                                                                                      |             |                                   |            |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------------------------|------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 290.5 (121) | Wyoming OFF vs San Jose State DEF | 391.8 (76) | -55.2 |
|                                                                                                                                                      | 375.5 (62)  | Wyoming DEF vs San Jose State OFF | 362.0 (72) |       |

YARDS / PLAY

|                                                                                                                                                     |          |                                   |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|-----------------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 5.1 (87) | Wyoming OFF vs San Jose State DEF | 5.6 (70) | -0.10 |
|                                                                                                                                                     | 5.5 (66) | Wyoming DEF vs San Jose State OFF | 5.3 (73) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +4.90                                          | +1.65 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                                   |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 75.0 (109) | Wyoming OFF vs San Jose State DEF | 81.8 (52) | -14.4 |
|                                                                                                                                  | 81.2 (47)  | Wyoming DEF vs San Jose State OFF | 90.0 (45) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                   |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 31.8 (109) | Wyoming OFF vs San Jose State DEF | 36.2 (47)  | -7.69 |
|                                                                                                                   | 41.8 (91)  | Wyoming DEF vs San Jose State OFF | 33.9 (102) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|             |                                   |             |       |
|-------------|-----------------------------------|-------------|-------|
| 141.5 (129) | Wyoming OFF vs San Jose State DEF | 260.3 (106) | -15.0 |
| 171.8 (21)  | Wyoming DEF vs San Jose State OFF | 260.0 (37)  |       |

head-to-head +30.0

| PASS YARDS / ATTEMPT |          |                                   |          |                                    |
|----------------------|----------|-----------------------------------|----------|------------------------------------|
|                      | 6.5 (98) | Wyoming OFF vs San Jose State DEF | 7.1 (56) | <b>-1.14</b><br>head-to-head +0.10 |
|                      | 6.2 (24) | Wyoming DEF vs San Jose State OFF | 7.5 (61) |                                    |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                           |            |
|------------|---------------------------|------------|
| 29.3 (137) | Wyoming vs San Jose State | 54.4 (108) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                   |            |
|----------------------|-----------------------------------|------------|
| 14.5 (134)           | Wyoming OFF vs San Jose State DEF | 54.0 (61)  |
| 34.9 (17)            | Wyoming DEF vs San Jose State OFF | 23.1 (122) |

| SACKS ALLOWED / GAME               |            |                                   |           |  |
|------------------------------------|------------|-----------------------------------|-----------|--|
| <b>-12.7</b><br>head-to-head +0.09 | 2.00 (77)  | Wyoming OFF vs San Jose State DEF | 1.50 (88) |  |
|                                    | 1.30 (100) | Wyoming DEF vs San Jose State OFF | 2.30 (87) |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                           |      |
|--------------|---------------------------|------|
| 56.3         | Wyoming vs San Jose State | 60.4 |

| QB RUSH YARDS / GAME |                           |    |
|----------------------|---------------------------|----|
| --                   | Wyoming vs San Jose State | -- |

| PASSING EXPLOSIVENESS |            |                                   |           |                                    |
|-----------------------|------------|-----------------------------------|-----------|------------------------------------|
|                       | 1.06 (132) | Wyoming OFF vs San Jose State DEF | 1.10 (24) | <b>-0.21</b><br>head-to-head +0.10 |
|                       | 1.07 (15)  | Wyoming DEF vs San Jose State OFF | 1.19 (92) |                                    |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                   |      |
|----------------------|-----------------------------------|------|
| 1.50                 | Wyoming OFF vs San Jose State DEF | --   |
| --                   | Wyoming DEF vs San Jose State OFF | 1.30 |

## RUSHING GAME

| RUSH YARDS / GAME |             |                                   |             |                                    |
|-------------------|-------------|-----------------------------------|-------------|------------------------------------|
|                   | 149.0 (67)  | Wyoming OFF vs San Jose State DEF | 131.5 (48)  | <b>+2.71</b><br>head-to-head +25.3 |
|                   | 203.8 (119) | Wyoming DEF vs San Jose State OFF | 102.0 (111) |                                    |

| RUSH YARDS / ATTEMPT               |           |                                   |           |  |
|------------------------------------|-----------|-----------------------------------|-----------|--|
| <b>+0.14</b><br>head-to-head +0.20 | 4.4 (54)  | Wyoming OFF vs San Jose State DEF | 4.1 (56)  |  |
|                                    | 5.1 (113) | Wyoming DEF vs San Jose State OFF | 3.2 (115) |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                   |          |
|------------|-----------------------------------|----------|
| 0.00 (1)   | Wyoming OFF vs San Jose State DEF | 3.4 (85) |
| 4.2 (53)   | Wyoming DEF vs San Jose State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                   |           |
|------------|-----------|-----------------------------------|-----------|
| +0.07      | 3.4 (25)  | Wyoming OFF vs San Jose State DEF | 2.98 (91) |
|            | 3.3 (123) | Wyoming DEF vs San Jose State OFF | 3.0 (79)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |            |                                   |            |
|-----------------------------|------------|-----------------------------------|------------|
| +28.6<br>head-to-head +20.4 | 0.92 (2)   | Wyoming OFF vs San Jose State DEF | 0.81 (111) |
|                             | 0.91 (135) | Wyoming DEF vs San Jose State OFF | 0.61 (124) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |            |                                   |            |
|------------|------------|-----------------------------------|------------|
| +4.71      | 0.14 (28)  | Wyoming OFF vs San Jose State DEF | 0.17 (94)  |
|            | 0.16 (111) | Wyoming DEF vs San Jose State OFF | 0.20 (106) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                                   |           |
|------------|-----------|-----------------------------------|-----------|
|            | 0.15 (83) | Wyoming OFF vs San Jose State DEF | 0.14 (91) |
|            | 0.14 (91) | Wyoming DEF vs San Jose State OFF | 0.15 (72) |

+1.73  
head-to-head +0.40

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                   |           |
|-----------------|------------|-----------------------------------|-----------|
|                 | 1.24 (39)  | Wyoming OFF vs San Jose State DEF | 1.01 (83) |
|                 | 1.34 (133) | Wyoming DEF vs San Jose State OFF | 1.01 (98) |

+0.25  
head-to-head +0.11

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                   |            |
|------------------|------------|-----------------------------------|------------|
|                  | 0.80 (111) | Wyoming OFF vs San Jose State DEF | 0.76 (41)  |
|                  | 1.09 (76)  | Wyoming DEF vs San Jose State OFF | 0.58 (124) |

-0.68  
head-to-head +0.11

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.29 (126) | F+   | -1.02 (114) |
| -1.76 (136) | OF+  | -1.30 (125) |
| -0.63 (94)  | DF+  | -0.47 (89)  |
| -0.88 (128) | FEI  | -0.62 (109) |
| -0.65 (135) | OFEI | -0.48 (119) |
| -0.25 (100) | DFEI | -0.07 (83)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.35

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.26

|             |                         |             |
|-------------|-------------------------|-------------|
| -0.23 (115) | NET SUCCESS RATE        | -0.11 (101) |
| 0.29 (117)  | OFF SUCCESS RATE (OSR)  | 0.29 (115)  |
| 0.51 (104)  | OPP SUCCESS RATE (DSR)  | 0.40 (65)   |
| 0.43 (79)   | OFF SUCCESS RATE (CFBD) | 0.39 (115)  |
| 0.46 (122)  | DEF SUCCESS RATE (CFBD) | 0.43 (101)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.12

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-0.04

head-to-head +0.12

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.08 (103) | OFF PPA         | 0.10 (93) |
| 0.14 (99)  | DEF PPA ALLOWED | 0.06 (67) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.02

head-to-head +0.11

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 6.1 (35)   | Iowa State OFF vs BYU DEF | 4.7 (23)   | -1.50                                                                                                                                           |
|                                                                                                                                                                    | 5.9 (91)   | Iowa State DEF vs BYU OFF | 6.4 (21)   |                                                                                                                                                 |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| +11.8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | -- |
| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |    |

| RED ZONE % |           |                           |             |                                                                                                                                  |
|------------|-----------|---------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------|
| +26.7      | 100.0 (1) | Iowa State OFF vs BYU DEF | 100.0 (128) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 90.0 (94) | Iowa State DEF vs BYU OFF | 83.3 (76)   |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                           |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|---------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 33.3 (103) | Iowa State OFF vs BYU DEF | 41.0 (82) | -5.64 |
|                                                                                                                   | 30.0 (17)  | Iowa State DEF vs BYU OFF | 50.0 (12) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME                |            |                           |             |
|-----------------------------|------------|---------------------------|-------------|
| PASS YARDS / GAME           |            |                           |             |
| -40.5<br>head-to-head +57.6 | 194.0 (93) | Iowa State OFF vs BYU DEF | 212.3 (57)  |
|                             | 180.0 (25) | Iowa State DEF vs BYU OFF | 168.7 (115) |

| PASS YARDS / ATTEMPT |          |                           |          |                                    |
|----------------------|----------|---------------------------|----------|------------------------------------|
|                      | 7.3 (68) | Iowa State OFF vs BYU DEF | 6.6 (39) | <b>-0.14</b><br>head-to-head +0.80 |
|                      | 7.1 (56) | Iowa State DEF vs BYU OFF | 7.6 (58) |                                    |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                   |           |
|-----------|-------------------|-----------|
| 69.9 (62) | Iowa State vs BYU | 76.6 (51) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                           |            |
|----------------------|---------------------------|------------|
| 58.6 (50)            | Iowa State OFF vs BYU DEF | 79.7 (120) |
| 64.5 (85)            | Iowa State DEF vs BYU OFF | 72.4 (25)  |

| SACKS ALLOWED / GAME               |            |                           |           |  |
|------------------------------------|------------|---------------------------|-----------|--|
| <b>-7.17</b><br>head-to-head +4.69 | 1.30 (30)  | Iowa State OFF vs BYU DEF | 2.30 (48) |  |
|                                    | 0.80 (124) | Iowa State DEF vs BYU OFF | 0.70 (8)  |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                   |      |
|--------------|-------------------|------|
| 60.4         | Iowa State vs BYU | 58.2 |

| QB RUSH YARDS / GAME |                   |    |
|----------------------|-------------------|----|
| --                   | Iowa State vs BYU | -- |

| PASSING EXPLOSIVENESS              |           |                           |            |  |
|------------------------------------|-----------|---------------------------|------------|--|
| <b>+0.05</b><br>head-to-head +0.13 | 1.32 (25) | Iowa State OFF vs BYU DEF | 1.20 (58)  |  |
|                                    | 1.24 (73) | Iowa State DEF vs BYU OFF | 1.15 (110) |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                           |      |
|----------------------|---------------------------|------|
| 1.00                 | Iowa State OFF vs BYU DEF | --   |
| --                   | Iowa State DEF vs BYU OFF | 0.70 |

| RUSHING GAME         |            |                           |            |                             |
|----------------------|------------|---------------------------|------------|-----------------------------|
| RUSH YARDS / GAME    |            |                           |            |                             |
|                      | 219.8 (10) | Iowa State OFF vs BYU DEF | 83.7 (12)  | +78.0<br>head-to-head +77.6 |
|                      | 169.8 (90) | Iowa State DEF vs BYU OFF | 211.3 (18) |                             |
| RUSH YARDS / ATTEMPT |            |                           |            |                             |
|                      | 5.5 (10)   | Iowa State OFF vs BYU DEF | 3.0 (17)   | +2.54<br>head-to-head +2.40 |
|                      | 5.1 (113)  | Iowa State DEF vs BYU OFF | 5.8 (4)    |                             |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                           |          |
|------------|---------------------------|----------|
| 0.00 (1)   | Iowa State OFF vs BYU DEF | 5.2 (25) |
| 4.6 (41)   | Iowa State DEF vs BYU OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                           |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|---------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.0 (80)  | Iowa State OFF vs BYU DEF | 2.40 (19) | -1.12 |
|                                                                                                                                              | 2.85 (70) | Iowa State DEF vs BYU OFF | 3.7 (7)   |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                           |           |                             |
|--------------------|------------|---------------------------|-----------|-----------------------------|
|                    | 0.63 (117) | Iowa State OFF vs BYU DEF | 0.67 (36) | +9.83<br>head-to-head +23.8 |
|                    | 0.67 (36)  | Iowa State DEF vs BYU OFF | 0.87 (6)  |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                           |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.20 (105) | Iowa State OFF vs BYU DEF | 0.24 (23) | -10.1 |
|                                                                                                                                            | 0.19 (79)  | Iowa State DEF vs BYU OFF | 0.14 (38) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                           |           |                             |
|------------|-----------|---------------------------|-----------|-----------------------------|
|            | 0.15 (89) | Iowa State OFF vs BYU DEF | 0.18 (38) | +4.63<br>head-to-head +7.40 |
|            | 0.18 (45) | Iowa State DEF vs BYU OFF | 0.08 (4)  |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |           |                           |           |                             |
|-----------------|-----------|---------------------------|-----------|-----------------------------|
|                 | 1.13 (65) | Iowa State OFF vs BYU DEF | 0.71 (14) | +0.43<br>head-to-head +0.70 |
|                 | 1.00 (77) | Iowa State DEF vs BYU OFF | 1.53 (2)  |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                           |           |                             |
|------------------|------------|---------------------------|-----------|-----------------------------|
|                  | 1.67 (30)  | Iowa State OFF vs BYU DEF | 0.57 (26) | +0.70<br>head-to-head +0.80 |
|                  | 1.47 (111) | Iowa State DEF vs BYU OFF | 1.57 (41) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.54 (46) | F+   | 1.24 (12) |
| 0.45 (48) | OF+  | 1.01 (23) |
| 0.42 (46) | DF+  | 1.28 (17) |
| 0.49 (36) | FEI  | 0.74 (14) |
| 0.22 (31) | OFEI | 0.31 (19) |
| 0.19 (43) | DFEI | 0.40 (20) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.30

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.25

|            |                         |           |
|------------|-------------------------|-----------|
| 0.06 (53)  | NET SUCCESS RATE        | 0.23 (19) |
| 0.44 (65)  | OFF SUCCESS RATE (OSR)  | 0.48 (49) |
| 0.39 (54)  | OPP SUCCESS RATE (DSR)  | 0.25 (7)  |
| 0.41 (102) | OFF SUCCESS RATE (CFBD) | 0.53 (5)  |
| 0.39 (60)  | DEF SUCCESS RATE (CFBD) | 0.37 (41) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.18

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.02

head-to-head +0.17

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.17 (62) | OFF PPA         | 0.32 (15)  |
| 0.05 (64) | DEF PPA ALLOWED | -0.07 (21) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.16

head-to-head +0.27

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 46% / Rush 54%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN                                                                                                                                                          |            |                             |            |                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAYS / GAME                                                                                                                                                       |            |                             |            |                                                                                                                                                      |
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.                    | 63.5       | Indiana OFF vs Nebraska DEF | 63.3       | -9.30                                                                                                                                                |
|                                                                                                                                                                    | 62.5       | Indiana DEF vs Nebraska OFF | 72.0       |                                                                                                                                                      |
| POINTS / GAME                                                                                                                                                      |            |                             |            |                                                                                                                                                      |
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 41.5 (8)   | Indiana OFF vs Nebraska DEF | 16.0 (16)  | -2.00                                                                                                                                                |
|                                                                                                                                                                    | 13.5 (9)   | Indiana DEF vs Nebraska OFF | 46.0 (3)   |                                                                                                                                                      |
| YARDS / GAME                                                                                                                                                       |            |                             |            |                                                                                                                                                      |
| +12.5                                                                                                                                                              | 485.8 (11) | Indiana OFF vs Nebraska DEF | 281.0 (15) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|                                                                                                                                                                    | 283.0 (17) | Indiana DEF vs Nebraska OFF | 471.3 (15) |                                                                                                                                                      |
| YARDS / PLAY                                                                                                                                                       |            |                             |            |                                                                                                                                                      |
| +1.00                                                                                                                                                              | 7.6 (2)    | Indiana OFF vs Nebraska DEF | 4.4 (13)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.  |
|                                                                                                                                                                    | 4.5 (14)   | Indiana DEF vs Nebraska OFF | 6.5 (18)   |                                                                                                                                                      |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +3.45                                          | +0.64 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |           |                             |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 90.0 (45) | Indiana OFF vs Nebraska DEF | 88.9 (89) | -3.05 |
|                                                                                                                                  | 87.5 (75) | Indiana DEF vs Nebraska OFF | 94.4 (21) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |           |                             |          |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------|----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 47.7 (23) | Indiana OFF vs Nebraska DEF | 24.5 (3) | -9.93 |
|                                                                                                                   | 29.1 (14) | Indiana DEF vs Nebraska OFF | 53.1 (5) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME         |            |                             |            |                             |
|----------------------|------------|-----------------------------|------------|-----------------------------|
| PASS YARDS / GAME    |            |                             |            |                             |
|                      | 244.0 (49) | Indiana OFF vs Nebraska DEF | 180.0 (25) | +10.8<br>head-to-head +33.6 |
|                      | 205.8 (43) | Indiana DEF vs Nebraska OFF | 251.8 (44) |                             |
| PASS YARDS / ATTEMPT |            |                             |            |                             |

|                    |          |                             |          |
|--------------------|----------|-----------------------------|----------|
| <b>+1.06</b>       | 9.9 (4)  | Indiana OFF vs Nebraska DEF | 6.0 (12) |
| head-to-head +0.80 | 7.4 (68) | Indiana DEF vs Nebraska OFF | 7.7 (52) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR      |                     |           |
|----------|---------------------|-----------|
| 93.1 (4) | Indiana vs Nebraska | 79.4 (43) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                             |            |
|----------------------|-----------------------------|------------|
| 87.2 (5)             | Indiana OFF vs Nebraska DEF | 79.9 (122) |
| 82.8 (127)           | Indiana DEF vs Nebraska OFF | 72.0 (26)  |

| SACKS ALLOWED / GAME |                             |           |                    |  |
|----------------------|-----------------------------|-----------|--------------------|--|
| 1.30 (30)            | Indiana OFF vs Nebraska DEF | 2.80 (23) | <b>-5.79</b>       |  |
| 2.50 (36)            | Indiana DEF vs Nebraska OFF | 1.30 (30) |                    |  |
|                      |                             |           | head-to-head +2.06 |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                     |      |
|--------------|---------------------|------|
| 72.7         | Indiana vs Nebraska | 65.4 |

| QB RUSH YARDS / GAME |                     |    |
|----------------------|---------------------|----|
| --                   | Indiana vs Nebraska | -- |

| PASSING EXPLOSIVENESS |                             |           |                    |  |
|-----------------------|-----------------------------|-----------|--------------------|--|
| 1.37 (15)             | Indiana OFF vs Nebraska DEF | 1.30 (99) | <b>+0.38</b>       |  |
| 1.47 (135)            | Indiana DEF vs Nebraska OFF | 1.38 (12) |                    |  |
|                       |                             |           | head-to-head +0.17 |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                             |      |
|----------------------|-----------------------------|------|
| 0.00                 | Indiana OFF vs Nebraska DEF | --   |
| --                   | Indiana DEF vs Nebraska OFF | 0.50 |

## RUSHING GAME

| RUSH YARDS / GAME  |           |                             |            |
|--------------------|-----------|-----------------------------|------------|
| <b>+39.7</b>       | 241.8 (7) | Indiana OFF vs Nebraska DEF | 101.0 (21) |
| head-to-head +46.0 | 77.3 (8)  | Indiana DEF vs Nebraska OFF | 219.5 (11) |

| RUSH YARDS / ATTEMPT |          |                             |          |
|----------------------|----------|-----------------------------|----------|
| <b>+1.34</b>         | 6.4 (2)  | Indiana OFF vs Nebraska DEF | 3.3 (25) |
| head-to-head +1.60   | 2.40 (7) | Indiana DEF vs Nebraska OFF | 5.7 (6)  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                             |          |
|------------|-----------------------------|----------|
| 0.00 (1)   | Indiana OFF vs Nebraska DEF | 6.0 (9)  |
| 6.4 (6)    | Indiana DEF vs Nebraska OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|              |          |                             |           |                                                                                                                                              |
|--------------|----------|-----------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.95</b> | 3.6 (11) | Indiana OFF vs Nebraska DEF | 2.97 (88) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|              | 2.16 (7) | Indiana DEF vs Nebraska OFF | 3.5 (23)  |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|                                    |           |                             |            |
|------------------------------------|-----------|-----------------------------|------------|
| <b>+8.62</b><br>head-to-head +37.2 | 0.72 (82) | Indiana OFF vs Nebraska DEF | 0.80 (107) |
|                                    | 0.42 (4)  | Indiana DEF vs Nebraska OFF | 0.73 (78)  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|              |           |                             |            |                                                                                                                                            |
|--------------|-----------|-----------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+11.5</b> | 0.12 (14) | Indiana OFF vs Nebraska DEF | 0.17 (100) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|              | 0.26 (11) | Indiana DEF vs Nebraska OFF | 0.15 (40)  |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                                    |           |                             |           |
|------------------------------------|-----------|-----------------------------|-----------|
| <b>+1.83</b><br>head-to-head +2.30 | 0.10 (12) | Indiana OFF vs Nebraska DEF | 0.19 (27) |
|                                    | 0.19 (23) | Indiana DEF vs Nebraska OFF | 0.12 (27) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                                    |           |                             |           |
|------------------------------------|-----------|-----------------------------|-----------|
| <b>+0.27</b><br>head-to-head +0.27 | 1.41 (7)  | Indiana OFF vs Nebraska DEF | 0.97 (67) |
|                                    | 0.71 (15) | Indiana DEF vs Nebraska OFF | 1.40 (11) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                                    |           |                             |           |
|------------------------------------|-----------|-----------------------------|-----------|
| <b>+0.91</b><br>head-to-head +0.80 | 2.39 (5)  | Indiana OFF vs Nebraska DEF | 0.87 (52) |
|                                    | 0.63 (29) | Indiana DEF vs Nebraska OFF | 1.83 (20) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 1.96 (5)  | F+   | 1.15 (16) |
| 1.94 (7)  | OF+  | 1.22 (14) |
| 1.69 (7)  | DF+  | 0.86 (26) |
| 1.14 (7)  | FEI  | 0.58 (25) |
| 0.61 (7)  | OFEI | 0.33 (18) |
| 0.51 (12) | DFEI | 0.21 (39) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.58**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.56**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.44 (4)  | NET SUCCESS RATE        | 0.24 (16) |
| 0.74 (1)  | OFF SUCCESS RATE (OSR)  | 0.61 (10) |
| 0.31 (29) | OPP SUCCESS RATE (DSR)  | 0.37 (45) |
| 0.52 (7)  | OFF SUCCESS RATE (CFBD) | 0.49 (21) |
| 0.30 (3)  | DEF SUCCESS RATE (CFBD) | 0.35 (28) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.19**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.26**

head-to-head +0.19

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.44 (1)   | OFF PPA         | 0.37 (4)   |
| -0.09 (16) | DEF PPA ALLOWED | -0.05 (28) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.18**

head-to-head +0.11

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|--------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 73.2 | Texas A&M; OFF vs Missouri DEF | 73.8 | -12.1 |
|                                                                                                                                                 | 55.0 | Texas A&M; DEF vs Missouri OFF | 66.5 |       |

POINTS / GAME

|       |           |                                |           |                                                                                                                                                                    |
|-------|-----------|--------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.20 | 31.8 (46) | Texas A&M; OFF vs Missouri DEF | 21.5 (43) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 18.6 (30) | Texas A&M; DEF vs Missouri OFF | 33.5 (28) |                                                                                                                                                                    |

YARDS / GAME

|                                                                                                                                                      |            |                                |            |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 356.2 (81) | Texas A&M; OFF vs Missouri DEF | 350.3 (49) | -24.6 |
|                                                                                                                                                      | 312.8 (29) | Texas A&M; DEF vs Missouri OFF | 418.3 (41) |       |

YARDS / PLAY

|                                                                                                                                                     |           |                                |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 4.9 (102) | Texas A&M; OFF vs Missouri DEF | 4.7 (23) | -2.40 |
|                                                                                                                                                     | 5.7 (76)  | Texas A&M; DEF vs Missouri OFF | 6.3 (25) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| --                                             | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                |            |                                                                                                                                  |
|-------|-----------|--------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +28.6 | 82.6 (82) | Texas A&M; OFF vs Missouri DEF | 88.9 (89)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 69.2 (12) | Texas A&M; DEF vs Missouri OFF | 73.7 (115) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                |           |                                                                                                                   |
|-------|-----------|--------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------|
| +11.2 | 43.2 (45) | Texas A&M; OFF vs Missouri DEF | 35.5 (42) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 26.4 (9)  | Texas A&M; DEF vs Missouri OFF | 41.1 (62) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|-----------------------------|------------|--------------------------------|-------------|--|
| +3.79<br>head-to-head +0.00 | 188.8 (97) | Texas A&M; OFF vs Missouri DEF | 261.8 (109) |  |
|                             | 191.8 (34) | Texas A&M; DEF vs Missouri OFF | 258.8 (39)  |  |

| PASS YARDS / ATTEMPT |           |                                |          |                    |
|----------------------|-----------|--------------------------------|----------|--------------------|
|                      | 6.0 (116) | Texas A&M; OFF vs Missouri DEF | 7.5 (71) | +1.66              |
|                      | 7.9 (88)  | Texas A&M; DEF vs Missouri OFF | 8.6 (25) | head-to-head +3.00 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                        |           |
|------------|------------------------|-----------|
| 57.4 (101) | Texas A&M; vs Missouri | 85.5 (22) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                |            |
|----------------------|--------------------------------|------------|
| 49.6 (70)            | Texas A&M; OFF vs Missouri DEF | 78.9 (117) |
| 78.1 (116)           | Texas A&M; DEF vs Missouri OFF | 59.7 (45)  |

| SACKS ALLOWED / GAME |            |                                |           |                    |
|----------------------|------------|--------------------------------|-----------|--------------------|
|                      | 1.80 (60)  | Texas A&M; OFF vs Missouri DEF | 3.5 (6)   | -8.72              |
|                      | 1.00 (109) | Texas A&M; DEF vs Missouri OFF | 1.30 (30) | head-to-head +6.15 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                        |      |
|--------------|------------------------|------|
| 56.3         | Texas A&M; vs Missouri | 63.3 |

| QB RUSH YARDS / GAME |                        |    |
|----------------------|------------------------|----|
| --                   | Texas A&M; vs Missouri | -- |

| PASSING EXPLOSIVENESS |            |                                |            |                    |
|-----------------------|------------|--------------------------------|------------|--------------------|
|                       | 1.08 (130) | Texas A&M; OFF vs Missouri DEF | 1.38 (122) | +0.11              |
|                       | 1.27 (87)  | Texas A&M; DEF vs Missouri OFF | 1.31 (37)  | head-to-head +0.12 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                |      |
|----------------------|--------------------------------|------|
| 1.00                 | Texas A&M; OFF vs Missouri DEF | --   |
| --                   | Texas A&M; DEF vs Missouri OFF | 0.00 |

| RUSHING GAME         |            |                                |            |                    |
|----------------------|------------|--------------------------------|------------|--------------------|
| RUSH YARDS / GAME    |            |                                |            |                    |
|                      | 167.4 (50) | Texas A&M; OFF vs Missouri DEF | 88.5 (13)  | -22.6              |
|                      | 121.0 (38) | Texas A&M; DEF vs Missouri OFF | 159.5 (54) | head-to-head +24.6 |
| RUSH YARDS / ATTEMPT |            |                                |            |                    |
|                      | 4.2 (70)   | Texas A&M; OFF vs Missouri DEF | 2.50 (8)   | +0.24              |
|                      | 4.1 (56)   | Texas A&M; DEF vs Missouri OFF | 4.5 (47)   | head-to-head +1.90 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                |          |
|------------|--------------------------------|----------|
| 0.00 (1)   | Texas A&M; OFF vs Missouri DEF | 5.6 (16) |
| 3.4 (85)   | Texas A&M; DEF vs Missouri OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                                |            |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------|------------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.2 (58)  | Texas A&M; OFF vs Missouri DEF | 2.35 (14)  | -0.20 |
|                                                                                                                                              | 2.82 (67) | Texas A&M; DEF vs Missouri OFF | 2.89 (102) |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                                |           |  |
|-----------------------------|-----------|--------------------------------|-----------|--|
| +10.4<br>head-to-head +10.4 | 0.83 (19) | Texas A&M; OFF vs Missouri DEF | 0.71 (67) |  |
|                             | 0.69 (56) | Texas A&M; DEF vs Missouri OFF | 0.75 (60) |  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                                |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.16 (63) | Texas A&M; OFF vs Missouri DEF | 0.26 (8)  | -4.97 |
|                                                                                                                                            | 0.19 (78) | Texas A&M; DEF vs Missouri OFF | 0.19 (90) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                                |            |                             |
|------------|-----------|--------------------------------|------------|-----------------------------|
|            | 0.14 (64) | Texas A&M; OFF vs Missouri DEF | 0.22 (10)  | -4.07<br>head-to-head +1.40 |
|            | 0.18 (32) | Texas A&M; DEF vs Missouri OFF | 0.16 (107) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                |            |  |
|-----------------------------|-----------|--------------------------------|------------|--|
| +0.03<br>head-to-head +0.34 | 1.14 (60) | Texas A&M; OFF vs Missouri DEF | 0.99 (75)  |  |
|                             | 0.92 (46) | Texas A&M; DEF vs Missouri OFF | 0.87 (122) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |           |                                |           |                             |
|------------------|-----------|--------------------------------|-----------|-----------------------------|
|                  | 1.01 (88) | Texas A&M; OFF vs Missouri DEF | 0.70 (33) | -0.12<br>head-to-head +0.51 |
|                  | 0.90 (57) | Texas A&M; DEF vs Missouri OFF | 1.32 (60) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.96 (20) | F+   | 1.21 (14) |
| 0.72 (34) | OF+  | 0.82 (28) |
| 0.79 (30) | DF+  | 1.41 (15) |
| 0.73 (15) | FEI  | 0.71 (16) |
| 0.19 (36) | OFEI | 0.18 (37) |
| 0.33 (26) | DFEI | 0.48 (14) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.14

### FEI DELTA

+0.02

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.06 (51) | NET SUCCESS RATE        | 0.26 (13) |
| 0.45 (60) | OFF SUCCESS RATE (OSR)  | 0.56 (19) |
| 0.39 (58) | OPP SUCCESS RATE (DSR)  | 0.30 (28) |
| 0.44 (73) | OFF SUCCESS RATE (CFBD) | 0.44 (68) |
| 0.38 (52) | DEF SUCCESS RATE (CFBD) | 0.35 (31) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.20

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.11

head-to-head +0.20

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.07 (108) | OFF PPA         | 0.24 (38) |
| -0.01 (44) | DEF PPA ALLOWED | 0.00 (52) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.01

head-to-head +0.16

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| YARDS / PLAY                                                                                                                                                       |             |                            |            |        |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 5.2 (77)    | UCF OFF vs Oklahoma St DEF | 5.2 (52)   | -1.00  |
|                                                                                                                                                                    | 5.0 (43)    | UCF DEF vs Oklahoma St OFF | 6.4 (21)   |        |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| +20.4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | -- |
| <b>THE FRAUD INDEX &amp; FRAUD GAP (POINTS VS. YARDS):</b> Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |    |

| RED ZONE % |           |                            |           |                                                                                                                                  |
|------------|-----------|----------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +0.16      | 92.3 (31) | UCF OFF vs Oklahoma St DEF | 66.7 (7)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 76.5 (35) | UCF DEF vs Oklahoma St OFF | 82.3 (83) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                            |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|----------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 28.6 (120) | UCF OFF vs Oklahoma St DEF | 34.9 (41)  | -6.88 |
|                                                                                                                   | 42.4 (97)  | UCF DEF vs Oklahoma St OFF | 27.9 (122) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |             |                            |            |                               |
|-------------------|-------------|----------------------------|------------|-------------------------------|

|                   | 172.8 (112) | UCF OFF vs Oklahoma St DEF | 183.3 (30) | +129.7<br>head-to-head +220.4 |
|                   | 260.8 (107) | UCF DEF vs Oklahoma St OFF | 315.7 (6)  |                               |

| PASS YARDS / ATTEMPT |          |                            |          |                             |
|----------------------|----------|----------------------------|----------|-----------------------------|
|                      | 6.5 (98) | UCF OFF vs Oklahoma St DEF | 7.3 (65) | +0.06<br>head-to-head +1.10 |
|                      | 6.9 (53) | UCF DEF vs Oklahoma St OFF | 8.0 (43) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                    |           |
|-----------|--------------------|-----------|
| 64.2 (73) | UCF vs Oklahoma St | 81.9 (31) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                            |            |
|----------------------|----------------------------|------------|
| 48.3 (73)            | UCF OFF vs Oklahoma St DEF | 76.8 (113) |
| 80.4 (124)           | UCF DEF vs Oklahoma St OFF | 60.8 (44)  |

| SACKS ALLOWED / GAME        |           |                            |           |
|-----------------------------|-----------|----------------------------|-----------|
| -6.02<br>head-to-head +5.12 | 2.00 (77) | UCF OFF vs Oklahoma St DEF | 2.70 (32) |
|                             | 2.00 (60) | UCF DEF vs Oklahoma St OFF | 0.70 (8)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                    |      |
|--------------|--------------------|------|
| 67.0         | UCF vs Oklahoma St | 63.0 |

| QB RUSH YARDS / GAME |                    |    |
|----------------------|--------------------|----|
| --                   | UCF vs Oklahoma St | -- |

| PASSING EXPLOSIVENESS       |           |                            |            |
|-----------------------------|-----------|----------------------------|------------|
| -0.01<br>head-to-head +0.22 | 1.29 (42) | UCF OFF vs Oklahoma St DEF | 1.16 (40)  |
|                             | 1.12 (31) | UCF DEF vs Oklahoma St OFF | 1.11 (125) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                            |      |
|----------------------|----------------------------|------|
| 0.50                 | UCF OFF vs Oklahoma St DEF | --   |
| --                   | UCF DEF vs Oklahoma St OFF | 1.70 |

| RUSHING GAME      |            |                            |             |                             |
|-------------------|------------|----------------------------|-------------|-----------------------------|
| RUSH YARDS / GAME |            |                            |             |                             |
|                   | 125.8 (89) | UCF OFF vs Oklahoma St DEF | 186.3 (107) | +14.9<br>head-to-head +5.90 |
|                   | 123.3 (45) | UCF DEF vs Oklahoma St OFF | 194.7 (30)  |                             |

| RUSH YARDS / ATTEMPT        |          |                            |          |
|-----------------------------|----------|----------------------------|----------|
| +0.24<br>head-to-head +0.40 | 4.3 (62) | UCF OFF vs Oklahoma St DEF | 4.3 (69) |
|                             | 3.3 (25) | UCF DEF vs Oklahoma St OFF | 4.9 (28) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                            |          |
|------------|----------------------------|----------|
| 0.00 (1)   | UCF OFF vs Oklahoma St DEF | 4.8 (35) |
| 5.0 (32)   | UCF DEF vs Oklahoma St OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                            |           |
|------------|-----------|----------------------------|-----------|
| +0.36      | 2.96 (93) | UCF OFF vs Oklahoma St DEF | 3.1 (102) |
|            | 2.45 (21) | UCF DEF vs Oklahoma St OFF | 3.2 (50)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                            |            |
|-----------------------------|-----------|----------------------------|------------|
| -10.5<br>head-to-head +2.67 | 0.72 (83) | UCF OFF vs Oklahoma St DEF | 0.61 (24)  |
|                             | 0.67 (36) | UCF DEF vs Oklahoma St OFF | 0.64 (111) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                            |           |
|------------|-----------|----------------------------|-----------|
| +3.01      | 0.19 (94) | UCF OFF vs Oklahoma St DEF | 0.17 (98) |
|            | 0.22 (40) | UCF DEF vs Oklahoma St OFF | 0.17 (69) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                            |           |
|------------|-----------|----------------------------|-----------|
|            | 0.15 (87) | UCF OFF vs Oklahoma St DEF | 0.16 (65) |
|            | 0.15 (78) | UCF DEF vs Oklahoma St OFF | 0.09 (7)  |

+6.03  
head-to-head +7.00

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                            |           |
|-----------------------------|-----------|----------------------------|-----------|
| +0.19<br>head-to-head +0.35 | 1.35 (18) | UCF OFF vs Oklahoma St DEF | 0.95 (59) |
|                             | 0.66 (8)  | UCF DEF vs Oklahoma St OFF | 1.29 (27) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                            |           |
|-----------------------------|-----------|----------------------------|-----------|
| +0.78<br>head-to-head +0.91 | 2.24 (10) | UCF OFF vs Oklahoma St DEF | 0.88 (53) |
|                             | 0.90 (55) | UCF DEF vs Oklahoma St OFF | 1.33 (59) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |            |
|------------|------|------------|
| 0.44 (52)  | F+   | 0.43 (53)  |
| -0.15 (78) | OF+  | 0.29 (52)  |
| 1.00 (24)  | DF+  | 0.47 (42)  |
| 0.17 (53)  | FEI  | 0.07 (59)  |
| -0.17 (80) | OFEI | -0.11 (74) |
| 0.34 (25)  | DFEI | 0.16 (49)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.12**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.10**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |           |
|------------|-------------------------|-----------|
| -0.04 (81) | NET SUCCESS RATE        | 0.10 (46) |
| 0.33 (98)  | OFF SUCCESS RATE (OSR)  | 0.51 (36) |
| 0.37 (47)  | OPP SUCCESS RATE (DSR)  | 0.41 (67) |
| 0.41 (103) | OFF SUCCESS RATE (CFBD) | 0.49 (26) |
| 0.38 (51)  | DEF SUCCESS RATE (CFBD) | 0.37 (46) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.14**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.03**

head-to-head +0.14

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.11 (84)  | OFF PPA         | 0.16 (69)  |
| -0.04 (35) | DEF PPA ALLOWED | -0.03 (36) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**-0.09**

head-to-head +0.05

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| YARDS / PLAY                                                                                                                                                       |             |                                      |            |        |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 5.2 (77)    | North Carolina OFF vs Pittsburgh DEF | 5.1 (48)   | -0.90  |
|                                                                                                                                                                    | 5.3 (57)    | North Carolina DEF vs Pittsburgh OFF | 5.9 (47)   |        |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| +6.19                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | +7.33 |
| <b>THE FRAUD INDEX &amp; FRAUD GAP (POINTS VS. YARDS):</b> Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE % |           |                                      |           |                                                                                                                                  |
|------------|-----------|--------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +5.91      | 90.9 (42) | North Carolina OFF vs Pittsburgh DEF | 70.0 (14) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 75.0 (24) | North Carolina DEF vs Pittsburgh OFF | 80.0 (94) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |           |                                      |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 37.1 (85) | North Carolina OFF vs Pittsburgh DEF | 33.3 (28) | -10.7 |
|                                                                                                                   | 40.0 (74) | North Carolina DEF vs Pittsburgh OFF | 41.2 (60) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME                |            |                                      |             |  |

|----------------------|-----------|--------------------------------------|-----------|
| -8.22                | 2.30 (87) | North Carolina OFF vs Pittsburgh DEF | 2.50 (36) |
| head-to-head +2.93   | 2.00 (60) | North Carolina DEF vs Pittsburgh OFF | 1.30 (30) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                              |      |
|--------------|------------------------------|------|
| 53.5         | North Carolina vs Pittsburgh | 63.5 |

| QB RUSH YARDS / GAME |                              |    |
|----------------------|------------------------------|----|
| --                   | North Carolina vs Pittsburgh | -- |

| PASSING EXPLOSIVENESS |            |                                      |            |
|-----------------------|------------|--------------------------------------|------------|
| +0.10                 | 1.11 (120) | North Carolina OFF vs Pittsburgh DEF | 1.45 (131) |
| head-to-head +0.25    | 1.02 (7)   | North Carolina DEF vs Pittsburgh OFF | 1.29 (41)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                      |      |
|----------------------|--------------------------------------|------|

| --                   | North Carolina DEF vs Pittsburgh OFF | 0.30 |

## RUSHING GAME

| RUSH YARDS / GAME |             |                                      |                     |
|-------------------|-------------|--------------------------------------|---------------------|
|                   | 127.0 (86)  | North Carolina OFF vs Pittsburgh DEF | 61.8 (4)            |
|                   | 177.7 (102) | North Carolina DEF vs Pittsburgh OFF | 154.5 (62)          |
|                   |             |                                      | +29.1               |
|                   |             |                                      | head-to-head +143.4 |

| RUSH YARDS / ATTEMPT |          |                                      |                    |
|----------------------|----------|--------------------------------------|--------------------|
|                      | 4.2 (70) | North Carolina OFF vs Pittsburgh DEF | 2.20 (4)           |
|                      | 4.4 (79) | North Carolina DEF vs Pittsburgh OFF | 4.4 (54)           |
|                      |          |                                      | +0.44              |
|                      |          |                                      | head-to-head +2.40 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                      |          |
|------------|--------------------------------------|----------|
| 0.00 (1)   | North Carolina OFF vs Pittsburgh DEF | 4.6 (41) |
| 4.0 (63)   | North Carolina DEF vs Pittsburgh OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                                      |          |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------------|----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.7 (4)   | North Carolina OFF vs Pittsburgh DEF | 1.75 (2) | -0.93 |
|                                                                                                                                              | 3.3 (120) | North Carolina DEF vs Pittsburgh OFF | 3.1 (66) |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                      |            |                             |
|--------------------|------------|--------------------------------------|------------|-----------------------------|
|                    | 0.78 (47)  | North Carolina OFF vs Pittsburgh DEF | 0.59 (21)  | +9.24<br>head-to-head +16.4 |
|                    | 0.86 (129) | North Carolina DEF vs Pittsburgh OFF | 0.67 (102) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                      |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.15 (48)  | North Carolina OFF vs Pittsburgh DEF | 0.30 (3)  | -15.5 |
|                                                                                                                                            | 0.11 (137) | North Carolina DEF vs Pittsburgh OFF | 0.19 (99) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                      |           |                             |
|------------|------------|--------------------------------------|-----------|-----------------------------|
|            | 0.15 (82)  | North Carolina OFF vs Pittsburgh DEF | 0.17 (54) | +6.33<br>head-to-head +7.80 |
|            | 0.13 (109) | North Carolina DEF vs Pittsburgh OFF | 0.11 (21) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                      |           |  |
|-----------------------------|-----------|--------------------------------------|-----------|--|
| +0.11<br>head-to-head +0.12 | 1.45 (4)  | North Carolina OFF vs Pittsburgh DEF | 0.76 (21) |  |
|                             | 0.88 (38) | North Carolina DEF vs Pittsburgh OFF | 1.21 (50) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                      |           |                             |
|------------------|------------|--------------------------------------|-----------|-----------------------------|
|                  | 0.66 (118) | North Carolina OFF vs Pittsburgh DEF | 0.40 (12) | -0.16<br>head-to-head +1.13 |
|                  | 0.92 (62)  | North Carolina DEF vs Pittsburgh OFF | 1.27 (68) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |           |
|------------|------|-----------|
| 0.07 (63)  | F+   | 0.93 (23) |
| 0.02 (68)  | OF+  | 0.58 (44) |
| 0.08 (63)  | DF+  | 1.07 (22) |
| 0.01 (60)  | FEI  | 0.51 (31) |
| 0.00 (58)  | OFEI | 0.07 (50) |
| -0.02 (77) | DFEI | 0.37 (23) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.46

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.50

|            |                         |           |
|------------|-------------------------|-----------|
| -0.04 (82) | NET SUCCESS RATE        | 0.17 (28) |
| 0.41 (74)  | OFF SUCCESS RATE (OSR)  | 0.46 (58) |
| 0.45 (78)  | OPP SUCCESS RATE (DSR)  | 0.28 (16) |
| 0.46 (50)  | OFF SUCCESS RATE (CFBD) | 0.46 (46) |
| 0.44 (105) | DEF SUCCESS RATE (CFBD) | 0.31 (7)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.21

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.06

head-to-head +0.21

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.13 (75) | OFF PPA         | 0.26 (31)  |
| 0.06 (68) | DEF PPA ALLOWED | -0.05 (29) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.10

head-to-head +0.24

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|       |          |                                  |           |                                                                                                                                                     |
|-------|----------|----------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.80 | 6.0 (43) | Arizona OFF vs West Virginia DEF | 6.8 (124) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 4.9 (34) | Arizona DEF vs West Virginia OFF | 6.1 (35)  |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| +13.0                                          | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                  |           |                                                                                                                                  |
|-------|-----------|----------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +21.5 | 88.2 (58) | Arizona OFF vs West Virginia DEF | 87.5 (75) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 70.0 (14) | Arizona DEF vs West Virginia OFF | 84.2 (74) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                  |           |                                                                                                                   |
|-------|-----------|----------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------|
| +1.34 | 57.7 (3)  | Arizona OFF vs West Virginia DEF | 31.9 (25) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 41.4 (88) | Arizona DEF vs West Virginia OFF | 46.9 (29) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                               |            |                                  |             |  |
|-------------------------------|------------|----------------------------------|-------------|--|
| +163.0<br>head-to-head +223.0 | 292.0 (18) | Arizona OFF vs West Virginia DEF | 317.8 (136) |  |
|                               | 216.5 (63) | Arizona DEF vs West Virginia OFF | 170.3 (113) |  |

| PASS YARDS / ATTEMPT |          |                                  |            |
|----------------------|----------|----------------------------------|------------|
| <b>+3.56</b>         | 8.3 (36) | Arizona OFF vs West Virginia DEF | 10.1 (137) |
| head-to-head +3.20   | 6.2 (24) | Arizona DEF vs West Virginia OFF | 9.0 (18)   |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                          |          |
|-----------|--------------------------|----------|
| 87.6 (11) | Arizona vs West Virginia | 90.6 (8) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                  |           |
|----------------------|----------------------------------|-----------|
| 62.8 (43)            | Arizona OFF vs West Virginia DEF | 37.3 (22) |
| 64.1 (84)            | Arizona DEF vs West Virginia OFF | 71.9 (27) |

| SACKS ALLOWED / GAME |                                  |           |                    |  |
|----------------------|----------------------------------|-----------|--------------------|--|
| 3.3 (120)            | Arizona OFF vs West Virginia DEF | 2.50 (36) | <b>-8.45</b>       |  |
| 2.30 (48)            | Arizona DEF vs West Virginia OFF | 2.00 (77) |                    |  |
|                      |                                  |           | head-to-head +0.21 |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                          |      |
|--------------|--------------------------|------|
| 72.3         | Arizona vs West Virginia | 55.3 |

| QB RUSH YARDS / GAME |                          |    |
|----------------------|--------------------------|----|
| --                   | Arizona vs West Virginia | -- |

| PASSING EXPLOSIVENESS |                                  |           |                    |  |
|-----------------------|----------------------------------|-----------|--------------------|--|
| 1.16 (104)            | Arizona OFF vs West Virginia DEF | 1.21 (66) | <b>+0.29</b>       |  |
| 1.46 (133)            | Arizona DEF vs West Virginia OFF | 1.29 (44) |                    |  |
|                       |                                  |           | head-to-head +0.39 |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                  |      |
|----------------------|----------------------------------|------|
| 1.00                 | Arizona OFF vs West Virginia DEF | --   |
| --                   | Arizona DEF vs West Virginia OFF | 0.30 |

| RUSHING GAME         |            |                                  |            |                                                |
|----------------------|------------|----------------------------------|------------|------------------------------------------------|
| RUSH YARDS / GAME    |            |                                  |            |                                                |
|                      | 142.3 (76) | Arizona OFF vs West Virginia DEF | 173.5 (98) | <div>+85.9</div> <div>head-to-head +73.2</div> |
|                      | 100.5 (20) | Arizona DEF vs West Virginia OFF | 288.5 (1)  |                                                |
| RUSH YARDS / ATTEMPT |            |                                  |            |                                                |
|                      | 4.2 (70)   | Arizona OFF vs West Virginia DEF | 4.6 (87)   | <div>+0.54</div> <div>head-to-head +0.10</div> |
|                      | 3.6 (36)   | Arizona DEF vs West Virginia OFF | 5.3 (14)   |                                                |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                  |          |
|------------|----------------------------------|----------|
| 0.00 (1)   | Arizona OFF vs West Virginia DEF | 4.4 (46) |
| 5.2 (25)   | Arizona DEF vs West Virginia OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                  |           |
|------------|-----------|----------------------------------|-----------|
| +0.45      | 3.5 (20)  | Arizona OFF vs West Virginia DEF | 2.96 (86) |
|            | 2.66 (44) | Arizona DEF vs West Virginia OFF | 3.3 (38)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                  |           |
|--------------------|------------|----------------------------------|-----------|
|                    | 0.83 (16)  | Arizona OFF vs West Virginia DEF | 0.71 (64) |
|                    | 0.92 (136) | Arizona DEF vs West Virginia OFF | 0.69 (99) |

+16.8  
head-to-head +6.47

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                  |           |
|------------|-----------|----------------------------------|-----------|
| +1.11      | 0.15 (41) | Arizona OFF vs West Virginia DEF | 0.21 (51) |
|            | 0.23 (27) | Arizona DEF vs West Virginia OFF | 0.14 (30) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                  |           |
|-----------------------------|-----------|----------------------------------|-----------|
| +4.13<br>head-to-head +2.40 | 0.12 (34) | Arizona OFF vs West Virginia DEF | 0.14 (91) |
|                             | 0.17 (58) | Arizona DEF vs West Virginia OFF | 0.12 (32) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                  |           |
|-----------------------------|-----------|----------------------------------|-----------|
| +0.40<br>head-to-head +0.40 | 1.40 (10) | Arizona OFF vs West Virginia DEF | 1.10 (98) |
|                             | 0.97 (69) | Arizona DEF vs West Virginia OFF | 1.14 (63) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |           |                                  |            |
|------------------|-----------|----------------------------------|------------|
|                  | 1.01 (89) | Arizona OFF vs West Virginia DEF | 1.40 (104) |
|                  | 0.74 (38) | Arizona DEF vs West Virginia OFF | 1.73 (22)  |

+0.12  
head-to-head +0.06

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |            |
|-----------|------|------------|
| 0.95 (21) | F+   | 0.07 (63)  |
| 0.96 (25) | OF+  | 0.71 (35)  |
| 0.84 (27) | DF+  | -0.65 (95) |
| 0.56 (26) | FEI  | 0.01 (60)  |
| 0.30 (20) | OFEI | 0.16 (39)  |
| 0.25 (33) | DFEI | -0.16 (92) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.55**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.55**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |            |
|-----------|-------------------------|------------|
| 0.24 (15) | NET SUCCESS RATE        | -0.03 (76) |
| 0.59 (13) | OFF SUCCESS RATE (OSR)  | 0.45 (61)  |
| 0.34 (39) | OPP SUCCESS RATE (DSR)  | 0.48 (90)  |
| 0.50 (20) | OFF SUCCESS RATE (CFBD) | 0.45 (58)  |
| 0.34 (18) | DEF SUCCESS RATE (CFBD) | 0.46 (120) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.28**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.22**

head-to-head +0.28

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.22 (45)  | OFF PPA         | 0.22 (47)  |
| -0.01 (41) | DEF PPA ALLOWED | 0.17 (112) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.17**

head-to-head +0.18

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN     |            |                                             |             |                                                                                                                                                                    |

| +3.60         | 6.6 (13)   | Wake Forest OFF vs North Carolina State DEF | 6.8 (124)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|               | 4.6 (16)   | Wake Forest DEF vs North Carolina State OFF | 5.2 (77)    |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| +7.29                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | -- |
| <b>THE FRAUD INDEX &amp; FRAUD GAP (POINTS VS. YARDS):</b> Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |    |

| RED ZONE %                                                                                                                       |            |                                             |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 92.0 (34)  | Wake Forest OFF vs North Carolina State DEF | 76.9 (36) | -7.87 |
|                                                                                                                                  | 94.4 (121) | Wake Forest DEF vs North Carolina State OFF | 82.3 (83) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |           |                                             |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|---------------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 45.9 (36) | Wake Forest OFF vs North Carolina State DEF | 34.7 (39) | -10.5 |
|                                                                                                                   | 41.9 (94) | Wake Forest DEF vs North Carolina State OFF | 49.2 (18) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

## PASSING GAME

### PASS YARDS / GAME

|                                    |            |                                             |            |
|------------------------------------|------------|---------------------------------------------|------------|
| <b>+92.0</b><br>head-to-head +53.9 | 288.0 (20) | Wake Forest OFF vs North Carolina State DEF | 250.8 (98) |
|                                    | 235.4 (83) | Wake Forest DEF vs North Carolina State OFF | 249.5 (46) |

### PASS YARDS / ATTEMPT

|                                    |          |                                             |           |
|------------------------------------|----------|---------------------------------------------|-----------|
| <b>+3.16</b><br>head-to-head +4.20 | 9.2 (10) | Wake Forest OFF vs North Carolina State DEF | 8.8 (118) |
|                                    | 6.6 (39) | Wake Forest DEF vs North Carolina State OFF | 7.2 (76)  |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

### QBR

|           |                                     |           |
|-----------|-------------------------------------|-----------|
| 86.2 (19) | Wake Forest vs North Carolina State | 78.8 (46) |
|-----------|-------------------------------------|-----------|

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

### OFFENSIVE EFFICIENCY

|           |                                             |           |
|-----------|---------------------------------------------|-----------|
| 72.7 (24) | Wake Forest OFF vs North Carolina State DEF | 56.7 (67) |
| 65.5 (89) | Wake Forest DEF vs North Carolina State OFF | 66.3 (35) |

### SACKS ALLOWED / GAME

|           |                                             |            |                                    |
|-----------|---------------------------------------------|------------|------------------------------------|
| 1.80 (60) | Wake Forest OFF vs North Carolina State DEF | 1.30 (100) | <b>-9.60</b><br>head-to-head +0.79 |
| 2.80 (23) | Wake Forest DEF vs North Carolina State OFF | 1.50 (42)  |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

### COMPLETION %

|      |                                     |      |
|------|-------------------------------------|------|
| 64.3 | Wake Forest vs North Carolina State | 64.8 |
|------|-------------------------------------|------|

### QB RUSH YARDS / GAME

|    |                                     |    |
|----|-------------------------------------|----|
| -- | Wake Forest vs North Carolina State | -- |
|----|-------------------------------------|----|

### PASSING EXPLOSIVENESS

|                                    |           |                                             |            |
|------------------------------------|-----------|---------------------------------------------|------------|
| <b>+0.12</b><br>head-to-head +0.29 | 1.28 (47) | Wake Forest OFF vs North Carolina State DEF | 1.30 (101) |
|                                    | 1.04 (12) | Wake Forest DEF vs North Carolina State OFF | 1.25 (66)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

### INTERCEPTIONS / GAME

|      |                                             |      |
|------|---------------------------------------------|------|
| 0.20 | Wake Forest OFF vs North Carolina State DEF | --   |
| --   | Wake Forest DEF vs North Carolina State OFF | 1.00 |

## RUSHING GAME

### RUSH YARDS / GAME

|                                    |            |                                             |            |
|------------------------------------|------------|---------------------------------------------|------------|
| <b>+24.7</b><br>head-to-head +74.4 | 157.0 (58) | Wake Forest OFF vs North Carolina State DEF | 170.8 (91) |
|                                    | 111.4 (28) | Wake Forest DEF vs North Carolina State OFF | 142.0 (78) |

### RUSH YARDS / ATTEMPT

|                                    |          |                                             |           |
|------------------------------------|----------|---------------------------------------------|-----------|
| <b>+1.54</b><br>head-to-head +3.10 | 4.6 (45) | Wake Forest OFF vs North Carolina State DEF | 5.3 (120) |
|                                    | 3.1 (20) | Wake Forest DEF vs North Carolina State OFF | 3.7 (93)  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

### TFL / GAME

|          |                                             |           |
|----------|---------------------------------------------|-----------|
| 0.00 (1) | Wake Forest OFF vs North Carolina State DEF | 2.80 (96) |
| 4.8 (35) | Wake Forest DEF vs North Carolina State OFF | 0.00 (1)  |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|              |           |                                             |           |                                                                                                                                              |
|--------------|-----------|---------------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.28</b> | 3.3 (34)  | Wake Forest OFF vs North Carolina State DEF | 2.88 (73) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|              | 2.79 (63) | Wake Forest DEF vs North Carolina State OFF | 3.2 (61)  |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |            |                                             |           |                                    |
|--|------------|---------------------------------------------|-----------|------------------------------------|
|  | 0.62 (119) | Wake Forest OFF vs North Carolina State DEF | 0.68 (48) | <b>+15.1</b><br>head-to-head +28.4 |
|  | 0.73 (73)  | Wake Forest DEF vs North Carolina State OFF | 0.86 (8)  |                                    |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|              |           |                                             |           |                                                                                                                                            |
|--------------|-----------|---------------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.00</b> | 0.15 (39) | Wake Forest OFF vs North Carolina State DEF | 0.20 (58) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|              | 0.21 (48) | Wake Forest DEF vs North Carolina State OFF | 0.14 (31) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|  |           |                                             |           |                                    |
|--|-----------|---------------------------------------------|-----------|------------------------------------|
|  | 0.12 (26) | Wake Forest OFF vs North Carolina State DEF | 0.18 (42) | <b>+2.03</b><br>head-to-head +0.80 |
|  | 0.14 (98) | Wake Forest DEF vs North Carolina State OFF | 0.15 (72) |                                    |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

#### 2ND LEVEL YARDS

|                                    |           |                                             |            |
|------------------------------------|-----------|---------------------------------------------|------------|
| <b>+0.27</b><br>head-to-head +0.56 | 1.22 (48) | Wake Forest OFF vs North Carolina State DEF | 1.16 (111) |
|                                    | 0.80 (27) | Wake Forest DEF vs North Carolina State OFF | 1.02 (97)  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

#### OPEN FIELD YARDS

|                                    |           |                                             |            |
|------------------------------------|-----------|---------------------------------------------|------------|
| <b>+0.27</b><br>head-to-head +0.46 | 1.05 (85) | Wake Forest OFF vs North Carolina State DEF | 1.57 (116) |
|                                    | 0.57 (27) | Wake Forest DEF vs North Carolina State OFF | 1.58 (39)  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

#### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |            |
|-----------|------|------------|
| 0.71 (38) | F+   | 0.15 (59)  |
| 0.79 (30) | OF+  | 0.53 (45)  |
| 0.59 (37) | DF+  | -0.24 (85) |
| 0.47 (38) | FEI  | 0.10 (57)  |
| 0.24 (27) | OFEI | 0.11 (43)  |
| 0.27 (30) | DFEI | 0.02 (63)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

#### NET EFFICIENCY DELTA (THE VEGAS FILTER)

|              |                                                                                                                                                                                                                   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.38</b> | Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home). |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

#### FEI DELTA

|              |                                                                                                                                                                                                                   |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.37</b> | Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close. |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|            |                         |            |
|------------|-------------------------|------------|
| 0.16 (33)  | NET SUCCESS RATE        | -0.00 (68) |
| 0.60 (12)  | OFF SUCCESS RATE (OSR)  | 0.44 (65)  |
| 0.44 (74)  | OPP SUCCESS RATE (DSR)  | 0.44 (75)  |
| 0.49 (30)  | OFF SUCCESS RATE (CFBD) | 0.47 (43)  |
| 0.44 (106) | DEF SUCCESS RATE (CFBD) | 0.41 (86)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

#### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

+0.16

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.19

head-to-head +0.16

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

0.33 (9)

OFF PPA

0.23 (42)

0.10 (87)

DEF PPA ALLOWED

0.14 (98)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.26

head-to-head +0.14

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI -2.8

| PLAYS / GAME                                                                                                                                                       |             |                        |             |                                                                                                                                                      |
| +14.7                                                                                                                                                              | 64.0        | Tulane OFF vs Army DEF | 55.0        | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.      |
|                                                                                                                                                                    | 71.0        | Tulane DEF vs Army OFF | 65.3        |                                                                                                                                                      |
| POINTS / GAME                                                                                                                                                      |             |                        |             |                                                                                                                                                      |
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 18.8 (103)  | Tulane OFF vs Army DEF | 25.3 (59)   | -3.90                                                                                                                                                |
|                                                                                                                                                                    | 23.3 (50)   | Tulane DEF vs Army OFF | 24.7 (75)   |                                                                                                                                                      |
| YARDS / GAME                                                                                                                                                       |             |                        |             |                                                                                                                                                      |
| +7.50                                                                                                                                                              | 346.8 (88)  | Tulane OFF vs Army DEF | 443.7 (116) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|                                                                                                                                                                    | 422.0 (102) | Tulane DEF vs Army OFF | 361.0 (74)  |                                                                                                                                                      |
| YARDS / PLAY                                                                                                                                                       |             |                        |             |                                                                                                                                                      |
| +2.10                                                                                                                                                              | 5.4 (66)    | Tulane OFF vs Army DEF | 8.1 (138)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.  |
|                                                                                                                                                                    | 5.9 (91)    | Tulane DEF vs Army OFF | 5.5 (62)    |                                                                                                                                                      |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| -4.78                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | -7.21 |
| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE % |           |                        |             |                                                                                                                                  |
|------------|-----------|------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------|
| +16.9      | 87.5 (61) | Tulane OFF vs Army DEF | 100.0 (128) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 70.6 (17) | Tulane DEF vs Army OFF | 100.0 (1)   |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                        |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 36.8 (86)  | Tulane OFF vs Army DEF | 43.3 (102) | -14.2 |
|                                                                                                                   | 48.4 (120) | Tulane DEF vs Army OFF | 46.0 (35)  |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME                |             |                        |             |
|-----------------------------|-------------|------------------------|-------------|
| PASS YARDS / GAME           |             |                        |             |
| -13.8<br>head-to-head +97.0 | 186.3 (100) | Tulane OFF vs Army DEF | 246.7 (92)  |
|                             | 231.0 (78)  | Tulane DEF vs Army OFF | 105.0 (135) |
| PASS YARDS / ATTEMPT        |             |                        |             |

|                                    |          |                        |            |
|------------------------------------|----------|------------------------|------------|
| <b>+2.16</b><br>head-to-head +1.50 | 7.0 (82) | Tulane OFF vs Army DEF | 10.0 (133) |
|                                    | 7.8 (82) | Tulane DEF vs Army OFF | 7.7 (52)   |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                |           |
|------------|----------------|-----------|
| 28.7 (138) | Tulane vs Army | 85.9 (20) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                        |           |
|----------------------|------------------------|-----------|
| 32.2 (108)           | Tulane OFF vs Army DEF | 22.9 (5)  |
| 52.5 (57)            | Tulane DEF vs Army OFF | 73.0 (22) |

| SACKS ALLOWED / GAME               |           |                        |            |
|------------------------------------|-----------|------------------------|------------|
| <b>-5.39</b><br>head-to-head +14.1 | 3.3 (120) | Tulane OFF vs Army DEF | 0.30 (136) |
|                                    | 1.50 (88) | Tulane DEF vs Army OFF | 0.70 (8)   |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                |      |
|--------------|----------------|------|
| 54.2         | Tulane vs Army | 61.0 |

| QB RUSH YARDS / GAME |                |    |
|----------------------|----------------|----|
| --                   | Tulane vs Army | -- |

| PASSING EXPLOSIVENESS              |            |                        |            |
|------------------------------------|------------|------------------------|------------|
| <b>+0.35</b><br>head-to-head +0.42 | 1.51 (1)   | Tulane OFF vs Army DEF | 1.30 (96)  |
|                                    | 1.31 (102) | Tulane DEF vs Army OFF | 1.09 (127) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                        |      |
|----------------------|------------------------|------|
| 0.30                 | Tulane OFF vs Army DEF | --   |
| --                   | Tulane DEF vs Army OFF | 0.30 |

## RUSHING GAME

| RUSH YARDS / GAME |             |                        |                                     |
|-------------------|-------------|------------------------|-------------------------------------|
|                   | 160.5 (53)  | Tulane OFF vs Army DEF | 197.0 (116)                         |
|                   | 191.0 (110) | Tulane DEF vs Army OFF | 256.0 (3)                           |
|                   |             |                        | <b>+143.9</b><br>head-to-head +89.5 |

| RUSH YARDS / ATTEMPT               |           |                        |           |
|------------------------------------|-----------|------------------------|-----------|
| <b>+2.94</b><br>head-to-head +1.50 | 4.7 (40)  | Tulane OFF vs Army DEF | 6.6 (136) |
|                                    | 4.8 (103) | Tulane DEF vs Army OFF | 5.0 (22)  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                        |            |
|------------|------------------------|------------|
| 0.00 (1)   | Tulane OFF vs Army DEF | 1.20 (116) |
| 4.0 (63)   | Tulane DEF vs Army OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|                                                                                                                                              |            |                        |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.57 (130) | Tulane OFF vs Army DEF | 3.2 (115) | -0.95 |
|                                                                                                                                              | 3.1 (103)  | Tulane DEF vs Army OFF | 3.7 (10)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|            |                        |            |                             |
|------------|------------------------|------------|-----------------------------|
| 0.75 (60)  | Tulane OFF vs Army DEF | 0.82 (116) | +24.0<br>head-to-head +11.0 |
| 0.77 (100) | Tulane DEF vs Army OFF | 0.91 (3)   |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|                                                                                                                                            |            |                        |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.22 (123) | Tulane OFF vs Army DEF | 0.19 (68) | -13.5 |
|                                                                                                                                            | 0.16 (105) | Tulane DEF vs Army OFF | 0.11 (10) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|            |                        |            |                             |
|------------|------------------------|------------|-----------------------------|
| 0.20 (134) | Tulane OFF vs Army DEF | 0.12 (119) | +11.9<br>head-to-head +13.6 |
| 0.11 (134) | Tulane DEF vs Army OFF | 0.08 (2)   |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|            |                        |            |                             |
|------------|------------------------|------------|-----------------------------|
| 1.03 (89)  | Tulane OFF vs Army DEF | 1.24 (115) | +0.40<br>head-to-head +0.24 |
| 1.15 (108) | Tulane DEF vs Army OFF | 1.36 (15)  |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                             |           |                        |            |
|-----------------------------|-----------|------------------------|------------|
| +2.17<br>head-to-head +1.28 | 2.77 (1)  | Tulane OFF vs Army DEF | 1.75 (124) |
|                             | 1.33 (99) | Tulane DEF vs Army OFF | 1.91 (17)  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |             |
|------------|------|-------------|
| -0.38 (87) | F+   | -0.16 (74)  |
| -0.61 (99) | OF+  | 0.37 (50)   |
| -0.15 (77) | DF+  | -0.78 (100) |
| -0.17 (76) | FEI  | -0.13 (74)  |
| -0.18 (83) | OFEI | 0.11 (43)   |
| -0.01 (71) | DFEI | -0.28 (110) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.02**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.04**

|            |                         |             |
|------------|-------------------------|-------------|
| -0.10 (93) | NET SUCCESS RATE        | -0.12 (102) |
| 0.33 (98)  | OFF SUCCESS RATE (OSR)  | 0.44 (68)   |
| 0.43 (72)  | OPP SUCCESS RATE (DSR)  | 0.56 (118)  |
| 0.34 (135) | OFF SUCCESS RATE (CFBD) | 0.53 (4)    |
| 0.40 (64)  | DEF SUCCESS RATE (CFBD) | 0.45 (117)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.02**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.04**

head-to-head +0.02

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.10 (87)  | OFF PPA         | 0.33 (10)  |
| 0.17 (113) | DEF PPA ALLOWED | 0.23 (127) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.29**

head-to-head +0.17

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| YARDS / PLAY                                                                                                                                                       |             |                                           |             |                                                                                                                                                      |
| +0.00                                                                                                                                                              | 4.3 (126)   | Sacramento State OFF vs Bowling Green DEF | 6.2 (108)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.  |
|                                                                                                                                                                    | 6.4 (111)   | Sacramento State DEF vs Bowling Green OFF | 4.1 (132)   |                                                                                                                                                      |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+7.41+20.9

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |            |                                           |             |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------|-------------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 66.7 (123) | Sacramento State OFF vs Bowling Green DEF | 100.0 (128) | -19.0 |
|                                                                                                                                  | 85.7 (67)  | Sacramento State DEF vs Bowling Green OFF | 100.0 (1)   |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN % |            |                                           |            |                                                                                                                   |
|------------|------------|-------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +3.25      | 33.3 (103) | Sacramento State OFF vs Bowling Green DEF | 38.5 (57)  | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|            | 39.1 (67)  | Sacramento State DEF vs Bowling Green OFF | 29.4 (119) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

## PASSING GAME

### PASS YARDS / GAME

|            |                                           |             |                                    |
|------------|-------------------------------------------|-------------|------------------------------------|
| 207.8 (85) | Sacramento State OFF vs Bowling Green DEF | 175.0 (23)  | <b>-60.2</b><br>head-to-head +3.80 |
| 234.8 (82) | Sacramento State DEF vs Bowling Green OFF | 151.8 (124) |                                    |

### PASS YARDS / ATTEMPT

|           |                                           |           |                                    |
|-----------|-------------------------------------------|-----------|------------------------------------|
| 5.2 (135) | Sacramento State OFF vs Bowling Green DEF | 8.2 (98)  | <b>-0.34</b><br>head-to-head +1.10 |
| 8.6 (113) | Sacramento State DEF vs Bowling Green OFF | 5.9 (120) |                                    |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attemp edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

### QBR

|            |                                   |            |
|------------|-----------------------------------|------------|
| 35.3 (133) | Sacramento State vs Bowling Green | 46.5 (124) |
|------------|-----------------------------------|------------|

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

### OFFENSIVE EFFICIENCY

|           |                                           |            |
|-----------|-------------------------------------------|------------|
| 7.8 (137) | Sacramento State OFF vs Bowling Green DEF | 45.0 (39)  |
| 23.3 (6)  | Sacramento State DEF vs Bowling Green OFF | 11.3 (135) |

### SACKS ALLOWED / GAME

|            |                                           |           |                                    |
|------------|-------------------------------------------|-----------|------------------------------------|
| 1.80 (60)  | Sacramento State OFF vs Bowling Green DEF | 3.5 (6)   | <b>-11.5</b><br>head-to-head +6.25 |
| 0.80 (124) | Sacramento State DEF vs Bowling Green OFF | 1.80 (60) |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

### COMPLETION %

|      |                                   |      |
|------|-----------------------------------|------|
| 55.6 | Sacramento State vs Bowling Green | 58.2 |
|------|-----------------------------------|------|

### QB RUSH YARDS / GAME

|    |                                   |    |
|----|-----------------------------------|----|
| -- | Sacramento State vs Bowling Green | -- |
|----|-----------------------------------|----|

### PASSING EXPLOSIVENESS

|            |                                           |            |                                    |
|------------|-------------------------------------------|------------|------------------------------------|
| 1.01 (137) | Sacramento State OFF vs Bowling Green DEF | 1.28 (93)  | <b>-0.07</b><br>head-to-head +0.11 |
| 1.42 (126) | Sacramento State DEF vs Bowling Green OFF | 0.98 (138) |                                    |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

### INTERCEPTIONS / GAME

|      |                                           |      |
|------|-------------------------------------------|------|
| 1.30 | Sacramento State OFF vs Bowling Green DEF | --   |
| --   | Sacramento State DEF vs Bowling Green OFF | 0.50 |

## RUSHING GAME

### RUSH YARDS / GAME

|                                    |            |                                           |             |
|------------------------------------|------------|-------------------------------------------|-------------|
| <b>+10.0</b><br>head-to-head +71.1 | 88.3 (126) | Sacramento State OFF vs Bowling Green DEF | 224.8 (129) |
|                                    | 161.5 (77) | Sacramento State DEF vs Bowling Green OFF | 80.5 (133)  |

### RUSH YARDS / ATTEMPT

|                                    |           |                                           |            |
|------------------------------------|-----------|-------------------------------------------|------------|
| <b>+0.54</b><br>head-to-head +1.40 | 3.2 (115) | Sacramento State OFF vs Bowling Green DEF | 5.7 (127)  |
|                                    | 4.8 (103) | Sacramento State DEF vs Bowling Green OFF | 2.70 (132) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

### TFL / GAME

|          |                                           |          |
|----------|-------------------------------------------|----------|
| 0.00 (1) | Sacramento State OFF vs Bowling Green DEF | 4.6 (41) |
| 3.0 (92) | Sacramento State DEF vs Bowling Green OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|              |            |                                           |            |                                                                                                                                              |
|--------------|------------|-------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.84</b> | 2.69 (124) | Sacramento State OFF vs Bowling Green DEF | 3.5 (133)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|              | 2.91 (80)  | Sacramento State DEF vs Bowling Green OFF | 2.39 (135) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|                                    |           |                                           |           |
|------------------------------------|-----------|-------------------------------------------|-----------|
| <b>+6.21</b><br>head-to-head +21.4 | 0.75 (60) | Sacramento State OFF vs Bowling Green DEF | 0.75 (85) |
|                                    | 0.50 (7)  | Sacramento State DEF vs Bowling Green OFF | 0.79 (45) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|              |            |                                           |            |                                                                                                                                            |
|--------------|------------|-------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+2.08</b> | 0.25 (134) | Sacramento State OFF vs Bowling Green DEF | 0.15 (114) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|              | 0.18 (85)  | Sacramento State DEF vs Bowling Green OFF | 0.24 (133) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                                    |            |                                           |            |
|------------------------------------|------------|-------------------------------------------|------------|
| <b>+1.23</b><br>head-to-head +1.80 | 0.17 (112) | Sacramento State OFF vs Bowling Green DEF | 0.12 (118) |
|                                    | 0.12 (122) | Sacramento State DEF vs Bowling Green OFF | 0.19 (129) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

#### 2ND LEVEL YARDS

|                                    |           |                                           |            |
|------------------------------------|-----------|-------------------------------------------|------------|
| <b>+0.34</b><br>head-to-head +0.91 | 1.02 (94) | Sacramento State OFF vs Bowling Green DEF | 1.42 (137) |
|                                    | 0.93 (50) | Sacramento State DEF vs Bowling Green OFF | 0.61 (138) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

#### OPEN FIELD YARDS

|                                    |            |                                           |            |
|------------------------------------|------------|-------------------------------------------|------------|
| <b>+1.20</b><br>head-to-head +1.71 | 0.96 (92)  | Sacramento State OFF vs Bowling Green DEF | 2.59 (137) |
|                                    | 1.47 (110) | Sacramento State DEF vs Bowling Green OFF | 0.37 (136) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

#### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.98 (137) | F+   | -1.49 (130) |
| -2.05 (138) | OF+  | -1.74 (134) |
| -1.69 (133) | DF+  | -0.80 (102) |
| -1.47 (138) | FEI  | -0.81 (123) |
| -0.86 (138) | OFEI | -0.56 (130) |
| -0.64 (138) | DFEI | -0.11 (88)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

#### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.83**

#### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.66**

|             |                         |             |
|-------------|-------------------------|-------------|
| -0.33 (129) | NET SUCCESS RATE        | -0.32 (126) |
| 0.18 (135)  | OFF SUCCESS RATE (OSR)  | 0.24 (125)  |
| 0.51 (104)  | OPP SUCCESS RATE (DSR)  | 0.57 (121)  |
| 0.42 (94)   | OFF SUCCESS RATE (CFBD) | 0.37 (124)  |
| 0.36 (35)   | DEF SUCCESS RATE (CFBD) | 0.47 (125)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

#### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.01

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-0.09

head-to-head +0.01

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

-0.06 (130)

OFF PPA

-0.06 (131)

0.13 (94)

DEF PPA ALLOWED

0.18 (117)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

-0.09

head-to-head +0.06

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| YARDS / PLAY                                                                                                                                                       |             |                                    |            |        |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 4.2 (131)   | Ball State OFF vs Northwestern DEF | 5.6 (70)   | -3.30  |
|                                                                                                                                                                    | 7.0 (128)   | Ball State DEF vs Northwestern OFF | 6.1 (35)   |        |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| +5.69                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | +7.69 |
| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE %                                                                                                                       |            |                                    |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 71.4 (117) | Ball State OFF vs Northwestern DEF | 75.0 (24) | -41.2 |
|                                                                                                                                  | 94.7 (124) | Ball State DEF vs Northwestern OFF | 92.9 (27) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                    |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|------------------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 28.6 (120) | Ball State OFF vs Northwestern DEF | 43.9 (104) | -18.2 |
|                                                                                                                   | 51.8 (129) | Ball State DEF vs Northwestern OFF | 38.9 (78)  |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |             |                                    |            |                     |
|-------------------|-------------|------------------------------------|------------|---------------------|
| PASS YARDS / GAME |             |                                    |            |                     |
|                   | 153.8 (122) | Ball State OFF vs Northwestern DEF | 204.0 (42) | +30.2               |
|                   | 268.0 (115) | Ball State DEF vs Northwestern OFF | 209.0 (81) | head-to-head +119.2 |

| PASS YARDS / ATTEMPT |           |                                    |          |                    |
|----------------------|-----------|------------------------------------|----------|--------------------|
|                      | 5.1 (136) | Ball State OFF vs Northwestern DEF | 6.2 (24) | +3.56              |
|                      | 8.9 (123) | Ball State DEF vs Northwestern OFF | 9.5 (7)  | head-to-head +7.10 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                            |           |
|------------|----------------------------|-----------|
| 48.8 (121) | Ball State vs Northwestern | 80.0 (37) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                    |            |
|----------------------|------------------------------------|------------|
| 30.0 (113)           | Ball State OFF vs Northwestern DEF | 72.7 (101) |
| 25.6 (9)             | Ball State DEF vs Northwestern OFF | 84.3 (8)   |

| SACKS ALLOWED / GAME |            |                                    |            |
|----------------------|------------|------------------------------------|------------|
| -12.0                | 1.80 (60)  | Ball State OFF vs Northwestern DEF | 1.30 (100) |
| head-to-head +5.23   | 0.80 (124) | Ball State DEF vs Northwestern OFF | 2.00 (77)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                            |      |
|--------------|----------------------------|------|
| 56.7         | Ball State vs Northwestern | 74.2 |

| QB RUSH YARDS / GAME |                            |    |
|----------------------|----------------------------|----|
| --                   | Ball State vs Northwestern | -- |

| PASSING EXPLOSIVENESS |            |                                    |                    |
|-----------------------|------------|------------------------------------|--------------------|
|                       | 1.44 (6)   | Ball State OFF vs Northwestern DEF | 1.09 (22)          |
|                       | 1.43 (129) | Ball State DEF vs Northwestern OFF | 1.26 (58)          |
|                       |            |                                    | +0.22              |
|                       |            |                                    | head-to-head +0.16 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                    |      |
|----------------------|------------------------------------|------|
| 0.50                 | Ball State OFF vs Northwestern DEF | --   |
| --                   | Ball State DEF vs Northwestern OFF | 0.00 |

## RUSHING GAME

| RUSH YARDS / GAME |             |                                    |                     |
|-------------------|-------------|------------------------------------|---------------------|
|                   | 97.8 (118)  | Ball State OFF vs Northwestern DEF | 166.3 (87)          |
|                   | 241.5 (134) | Ball State DEF vs Northwestern OFF | 209.0 (19)          |
|                   |             |                                    | +147.4              |
|                   |             |                                    | head-to-head +186.4 |

| RUSH YARDS / ATTEMPT |           |                                    |                    |
|----------------------|-----------|------------------------------------|--------------------|
|                      | 3.5 (99)  | Ball State OFF vs Northwestern DEF | 5.3 (120)          |
|                      | 5.7 (127) | Ball State DEF vs Northwestern OFF | 4.7 (40)           |
|                      |           |                                    | +2.04              |
|                      |           |                                    | head-to-head +1.60 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                    |          |
|------------|------------------------------------|----------|
| 0.00 (1)   | Ball State OFF vs Northwestern DEF | 3.0 (92) |
| 4.0 (63)   | Ball State DEF vs Northwestern OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |            |                                    |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.60 (128) | Ball State OFF vs Northwestern DEF | 3.2 (118) | -0.43 |
|                                                                                                                                              | 3.2 (108)  | Ball State DEF vs Northwestern OFF | 3.1 (71)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                    |           |                             |
|--------------------|------------|------------------------------------|-----------|-----------------------------|
|                    | 0.83 (16)  | Ball State OFF vs Northwestern DEF | 0.64 (34) | +12.0<br>head-to-head +8.44 |
|                    | 0.81 (111) | Ball State DEF vs Northwestern OFF | 0.75 (60) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                    |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.23 (127) | Ball State OFF vs Northwestern DEF | 0.17 (101) | -2.75 |
|                                                                                                                                            | 0.17 (89)  | Ball State DEF vs Northwestern OFF | 0.19 (92)  |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                    |           |                             |
|------------|------------|------------------------------------|-----------|-----------------------------|
|            | 0.19 (130) | Ball State OFF vs Northwestern DEF | 0.17 (51) | +5.63<br>head-to-head +11.6 |
|            | 0.12 (127) | Ball State DEF vs Northwestern OFF | 0.13 (45) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                    |           |                             |
|-----------------|------------|------------------------------------|-----------|-----------------------------|
|                 | 0.99 (107) | Ball State OFF vs Northwestern DEF | 0.95 (60) | +0.41<br>head-to-head +0.58 |
|                 | 1.15 (107) | Ball State DEF vs Northwestern OFF | 1.37 (14) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                    |            |                             |
|------------------|------------|------------------------------------|------------|-----------------------------|
|                  | 1.86 (19)  | Ball State OFF vs Northwestern DEF | 1.57 (118) | +1.87<br>head-to-head +0.78 |
|                  | 2.23 (134) | Ball State DEF vs Northwestern OFF | 1.99 (16)  |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |           |
|-------------|------|-----------|
| -1.70 (133) | F+   | 0.85 (29) |
| -1.43 (130) | OF+  | 0.76 (32) |
| -1.62 (132) | DF+  | 0.76 (32) |
| -1.06 (132) | FEI  | 0.56 (26) |
| -0.49 (121) | OFEI | 0.23 (30) |
| -0.49 (133) | DFEI | 0.29 (29) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-1.50

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 = lopsided edge, -0.50 to +0.50 = close.

-1.62

|             |                         |            |
|-------------|-------------------------|------------|
| -0.33 (128) | NET SUCCESS RATE        | 0.23 (22)  |
| 0.29 (116)  | OFF SUCCESS RATE (OSR)  | 0.54 (30)  |
| 0.61 (128)  | OPP SUCCESS RATE (DSR)  | 0.31 (30)  |
| 0.35 (134)  | OFF SUCCESS RATE (CFBD) | 0.49 (29)  |
| 0.44 (108)  | DEF SUCCESS RATE (CFBD) | 0.44 (107) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.55

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.30

head-to-head +0.55

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.05 (113) | OFF PPA         | 0.29 (22) |
| 0.29 (134) | DEF PPA ALLOWED | 0.07 (72) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.37

head-to-head +0.47

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI 9.3

(79% Florida)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                   |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 76.0 | South Carolina OFF vs Florida DEF | 73.8 | -6.80 |
|                                                                                                                                                 | 63.3 | South Carolina DEF vs Florida OFF | 72.3 |       |

POINTS / GAME

|                                                                                                                                                                    |            |                                   |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------|------------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 35.8 (17)  | South Carolina OFF vs Florida DEF | 33.3 (109) | -7.00 |
|                                                                                                                                                                    | 31.3 (102) | South Carolina DEF vs Florida OFF | 44.8 (4)   |       |

YARDS / GAME

|       |            |                                   |             |                                                                                                                                                      |
|-------|------------|-----------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +77.8 | 488.3 (8)  | South Carolina OFF vs Florida DEF | 438.8 (113) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|       | 363.8 (54) | South Carolina DEF vs Florida OFF | 485.5 (12)  |                                                                                                                                                      |

YARDS / PLAY

|                                                                                                                                                     |          |                                   |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|-----------------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 6.4 (21) | South Carolina OFF vs Florida DEF | 5.9 (91) | -0.20 |
|                                                                                                                                                     | 5.8 (83) | South Carolina DEF vs Florida OFF | 6.7 (9)  |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +10.7                                          | +4.23 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |             |                                   |            |       |
|----------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------------------------|------------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 94.1 (22)   | South Carolina OFF vs Florida DEF | 93.3 (118) | -8.00 |
|                                                                                                                                  | 100.0 (128) | South Carolina DEF vs Florida OFF | 95.5 (19)  |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                   |            |                                                                                                                   |
|-------|-----------|-----------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +2.44 | 42.9 (48) | South Carolina OFF vs Florida DEF | 47.5 (116) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 40.8 (80) | South Carolina DEF vs Florida OFF | 47.1 (27)  |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                              |            |                                   |             |
|------------------------------|------------|-----------------------------------|-------------|
| +119.0<br>head-to-head +53.8 | 269.5 (29) | South Carolina OFF vs Florida DEF | 296.3 (128) |
|                              | 243.5 (89) | South Carolina DEF vs Florida OFF | 268.5 (31)  |

| PASS YARDS / ATTEMPT |           |                                   |          |                    |
|----------------------|-----------|-----------------------------------|----------|--------------------|
|                      | 7.5 (61)  | South Carolina OFF vs Florida DEF | 7.8 (82) | +3.16              |
|                      | 8.3 (103) | South Carolina DEF vs Florida OFF | 9.7 (5)  | head-to-head +2.70 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                           |           |
|-----------|---------------------------|-----------|
| 63.2 (79) | South Carolina vs Florida | 83.6 (26) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                   |           |
|----------------------|-----------------------------------|-----------|
| 59.3 (47)            | South Carolina OFF vs Florida DEF | 54.9 (62) |
| 53.1 (58)            | South Carolina DEF vs Florida OFF | 84.8 (7)  |

| SACKS ALLOWED / GAME |           |                                   |           |
|----------------------|-----------|-----------------------------------|-----------|
| -7.86                | 1.50 (42) | South Carolina OFF vs Florida DEF | 3.0 (20)  |
| head-to-head +0.62   | 2.30 (48) | South Carolina DEF vs Florida OFF | 1.50 (42) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                           |      |
|--------------|---------------------------|------|
| 64.3         | South Carolina vs Florida | 70.3 |

| QB RUSH YARDS / GAME |                           |    |
|----------------------|---------------------------|----|
| --                   | South Carolina vs Florida | -- |

| PASSING EXPLOSIVENESS |            |                                   |                    |
|-----------------------|------------|-----------------------------------|--------------------|
|                       | 1.19 (87)  | South Carolina OFF vs Florida DEF | 1.24 (72)          |
|                       | 1.37 (117) | South Carolina DEF vs Florida OFF | 1.29 (40)          |
|                       |            |                                   | +0.20              |
|                       |            |                                   | head-to-head +0.23 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                   |      |
|----------------------|-----------------------------------|------|
| 0.80                 | South Carolina OFF vs Florida DEF | --   |
| --                   | South Carolina DEF vs Florida OFF | 0.50 |

| RUSHING GAME         |            |                                   |            |  |
|----------------------|------------|-----------------------------------|------------|--|
| RUSH YARDS / GAME    |            |                                   |            |  |
| +58.2                | 218.8 (13) | South Carolina OFF vs Florida DEF | 142.5 (57) |  |
| head-to-head +24.0   | 120.3 (37) | South Carolina DEF vs Florida OFF | 217.0 (15) |  |
| RUSH YARDS / ATTEMPT |            |                                   |            |  |
| +1.64                | 5.6 (8)    | South Carolina OFF vs Florida DEF | 4.4 (79)   |  |
| head-to-head +1.20   | 3.8 (45)   | South Carolina DEF vs Florida OFF | 5.0 (22)   |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                   |          |
|------------|-----------------------------------|----------|
| 0.00 (1)   | South Carolina OFF vs Florida DEF | 5.2 (25) |
| 5.4 (22)   | South Carolina DEF vs Florida OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                   |           |
|------------|-----------|-----------------------------------|-----------|
| +0.93      | 3.7 (9)   | South Carolina OFF vs Florida DEF | 2.80 (65) |
|            | 2.51 (23) | South Carolina DEF vs Florida OFF | 3.0 (77)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                                   |           |
|--------------------|-----------|-----------------------------------|-----------|
|                    | 0.75 (60) | South Carolina OFF vs Florida DEF | 0.76 (96) |
|                    | 0.67 (36) | South Carolina DEF vs Florida OFF | 0.86 (8)  |

+9.08  
head-to-head +1.68

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                   |            |
|------------|-----------|-----------------------------------|------------|
| +10.1      | 0.13 (23) | South Carolina OFF vs Florida DEF | 0.14 (123) |
|            | 0.22 (33) | South Carolina DEF vs Florida OFF | 0.16 (54)  |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                   |           |
|------------|------------|-----------------------------------|-----------|
|            | 0.13 (42)  | South Carolina OFF vs Florida DEF | 0.19 (25) |
|            | 0.14 (101) | South Carolina DEF vs Florida OFF | 0.11 (22) |

+5.53  
head-to-head +7.30

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                   |           |
|-----------------------------|-----------|-----------------------------------|-----------|
| +0.01<br>head-to-head +0.29 | 1.30 (25) | South Carolina OFF vs Florida DEF | 0.81 (29) |
|                             | 0.77 (23) | South Carolina DEF vs Florida OFF | 1.06 (82) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                   |           |
|-----------------------------|-----------|-----------------------------------|-----------|
| +1.28<br>head-to-head +0.82 | 2.37 (7)  | South Carolina OFF vs Florida DEF | 1.26 (92) |
|                             | 0.93 (63) | South Carolina DEF vs Florida OFF | 1.88 (18) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.69 (41) | F+   | 0.93 (23) |
| 0.77 (31) | OF+  | 1.40 (12) |
| 0.40 (47) | DF+  | 0.17 (58) |
| 0.50 (34) | FEI  | 0.53 (29) |
| 0.20 (34) | OFEI | 0.43 (12) |
| 0.25 (33) | DFEI | 0.04 (61) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.02

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.03

|           |                         |            |
|-----------|-------------------------|------------|
| 0.09 (48) | NET SUCCESS RATE        | 0.11 (44)  |
| 0.51 (37) | OFF SUCCESS RATE (OSR)  | 0.66 (4)   |
| 0.42 (70) | OPP SUCCESS RATE (DSR)  | 0.55 (115) |
| 0.48 (36) | OFF SUCCESS RATE (CFBD) | 0.49 (31)  |
| 0.40 (66) | DEF SUCCESS RATE (CFBD) | 0.41 (87)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.02

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.23

head-to-head +0.02

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.20 (53)  | OFF PPA         | 0.34 (8)  |
| 0.16 (107) | DEF PPA ALLOWED | 0.05 (65) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.29

head-to-head +0.26

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|                                                                                                                                                      | 391.8 (76)  | Old Dominion DEF vs Appalachian State OFF | 403.0 (48) |                   |

YARDS / PLAY

|                                                                                                                                                     |           |                                           |          |                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------------------------------|----------|------------------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 3.6 (137) | Old Dominion OFF vs Appalachian State DEF | 5.2 (52) | <div>-2.00</div> |
|                                                                                                                                                     | 5.1 (48)  | Old Dominion DEF vs Appalachian State OFF | 5.7 (55) |                  |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |                  |
|------------------------------------------------|------------------|
| <div>+19.2</div>                               | <div>+3.35</div> |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                                           |            |                  |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------|------------|------------------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 77.8 (103) | Old Dominion OFF vs Appalachian State DEF | 92.3 (108) | <div>-16.8</div> |
|                                                                                                                                  | 95.2 (126) | Old Dominion DEF vs Appalachian State OFF | 91.7 (35)  |                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                           |           |                  |
|-------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------|-----------|------------------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 29.5 (118) | Old Dominion OFF vs Appalachian State DEF | 34.1 (35) | <div>-13.5</div> |
|                                                                                                                   | 39.4 (68)  | Old Dominion DEF vs Appalachian State OFF | 37.8 (81) |                  |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

## PASSING GAME

### PASS YARDS / GAME

|             |                                           |            |                               |
|-------------|-------------------------------------------|------------|-------------------------------|
| 155.3 (121) | Old Dominion OFF vs Appalachian State DEF | 231.3 (79) | +101.9<br>head-to-head +162.1 |
| 239.0 (85)  | Old Dominion DEF vs Appalachian State OFF | 309.7 (11) |                               |

### PASS YARDS / ATTEMPT

|           |                                           |          |                             |
|-----------|-------------------------------------------|----------|-----------------------------|
| 5.7 (123) | Old Dominion OFF vs Appalachian State DEF | 6.6 (39) | +0.86<br>head-to-head +3.40 |
| 7.3 (65)  | Old Dominion DEF vs Appalachian State OFF | 8.4 (33) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

### QBR

|            |                                   |           |
|------------|-----------------------------------|-----------|
| 53.8 (110) | Old Dominion vs Appalachian State | 80.7 (36) |
|------------|-----------------------------------|-----------|

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

### OFFENSIVE EFFICIENCY

|           |                                           |           |
|-----------|-------------------------------------------|-----------|
| 7.5 (138) | Old Dominion OFF vs Appalachian State DEF | 47.6 (45) |
| 58.4 (72) | Old Dominion DEF vs Appalachian State OFF | 58.7 (49) |

### SACKS ALLOWED / GAME

|                             |           |                                           |            |
|-----------------------------|-----------|-------------------------------------------|------------|
| -9.43<br>head-to-head +14.0 | 5.8 (138) | Old Dominion OFF vs Appalachian State DEF | 1.30 (100) |
|                             | 1.80 (74) | Old Dominion DEF vs Appalachian State OFF | 1.00 (15)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

### COMPLETION %

|      |                                   |      |
|------|-----------------------------------|------|
| 49.5 | Old Dominion vs Appalachian State | 68.2 |
|------|-----------------------------------|------|

### QB RUSH YARDS / GAME

|    |                                   |    |
|----|-----------------------------------|----|
| -- | Old Dominion vs Appalachian State | -- |
|----|-----------------------------------|----|

### PASSING EXPLOSIVENESS

|           |                                           |           |                             |
|-----------|-------------------------------------------|-----------|-----------------------------|
| 1.33 (19) | Old Dominion OFF vs Appalachian State DEF | 1.13 (32) | +0.09<br>head-to-head +0.09 |
| 1.24 (78) | Old Dominion DEF vs Appalachian State OFF | 1.31 (31) |                             |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

### INTERCEPTIONS / GAME

|      |                                           |      |
|------|-------------------------------------------|------|
| 0.50 | Old Dominion OFF vs Appalachian State DEF | --   |
| --   | Old Dominion DEF vs Appalachian State OFF | 0.30 |

## RUSHING GAME

### RUSH YARDS / GAME

|            |                                           |            |                             |
|------------|-------------------------------------------|------------|-----------------------------|
| 88.0 (127) | Old Dominion OFF vs Appalachian State DEF | 143.0 (58) | -57.0<br>head-to-head +15.1 |
| 152.8 (69) | Old Dominion DEF vs Appalachian State OFF | 93.3 (123) |                             |

### RUSH YARDS / ATTEMPT

|                             |            |                                           |            |
|-----------------------------|------------|-------------------------------------------|------------|
| -1.76<br>head-to-head +0.20 | 2.60 (134) | Old Dominion OFF vs Appalachian State DEF | 4.0 (53)   |
|                             | 3.6 (36)   | Old Dominion DEF vs Appalachian State OFF | 2.80 (126) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

### TFL / GAME

|          |                                           |          |
|----------|-------------------------------------------|----------|
| 0.00 (1) | Old Dominion OFF vs Appalachian State DEF | 4.2 (53) |
| 5.4 (22) | Old Dominion DEF vs Appalachian State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|                                                                                                                                              |            |                                           |            |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------|------------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 1.60 (138) | Old Dominion OFF vs Appalachian State DEF | 2.62 (35)  | -0.91 |
|                                                                                                                                              | 2.56 (27)  | Old Dominion DEF vs Appalachian State OFF | 2.58 (129) |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|            |                                           |            |                             |
|------------|-------------------------------------------|------------|-----------------------------|
| 0.36 (138) | Old Dominion OFF vs Appalachian State DEF | 0.84 (124) | -13.5<br>head-to-head +9.73 |
| 0.64 (31)  | Old Dominion DEF vs Appalachian State OFF | 0.67 (102) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|                                                                                                                                            |            |                                           |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.32 (138) | Old Dominion OFF vs Appalachian State DEF | 0.23 (29)  | -9.66 |
|                                                                                                                                            | 0.21 (43)  | Old Dominion DEF vs Appalachian State OFF | 0.24 (130) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|            |                                           |           |                             |
|------------|-------------------------------------------|-----------|-----------------------------|
| 0.25 (138) | Old Dominion OFF vs Appalachian State DEF | 0.18 (45) | +2.73<br>head-to-head +15.1 |
| 0.16 (73)  | Old Dominion DEF vs Appalachian State OFF | 0.12 (32) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

#### 2ND LEVEL YARDS

|                                    |           |                                           |           |
|------------------------------------|-----------|-------------------------------------------|-----------|
| <b>-0.05</b><br>head-to-head +0.17 | 1.11 (68) | Old Dominion OFF vs Appalachian State DEF | 0.94 (54) |
|                                    | 0.86 (33) | Old Dominion DEF vs Appalachian State OFF | 1.02 (93) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

#### OPEN FIELD YARDS

|           |                                           |           |                                    |
|-----------|-------------------------------------------|-----------|------------------------------------|
| 1.30 (65) | Old Dominion OFF vs Appalachian State DEF | 0.74 (39) | <b>-0.30</b><br>head-to-head +0.01 |
| 0.96 (68) | Old Dominion DEF vs Appalachian State OFF | 1.10 (82) |                                    |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

#### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.83 (106) | F+   | -0.52 (95)  |
| -1.31 (126) | OF+  | -0.26 (85)  |
| -0.18 (80)  | DF+  | -0.73 (97)  |
| -0.50 (101) | FEI  | -0.47 (100) |
| -0.54 (127) | OFEI | -0.18 (83)  |
| 0.05 (60)   | DFEI | -0.28 (110) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

#### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.03**

#### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.03**

|             |                         |           |
|-------------|-------------------------|-----------|
| -0.33 (130) | NET SUCCESS RATE        | 0.06 (50) |
| 0.21 (131)  | OFF SUCCESS RATE (OSR)  | 0.46 (56) |
| 0.55 (112)  | OPP SUCCESS RATE (DSR)  | 0.40 (62) |
| 0.30 (138)  | OFF SUCCESS RATE (CFBD) | 0.45 (52) |
| 0.36 (34)   | DEF SUCCESS RATE (CFBD) | 0.42 (92) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

#### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.39

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.15

head-to-head +0.39

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

-0.15 (137)

OFF PPA

0.24 (39)

0.02 (56)

DEF PPA ALLOWED

0.08 (79)

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.04

head-to-head +0.33

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI -10.2

MIAMI (OH)

SOR 111

at

SOR 84

Pass 52% / Rush 48%

Pass 39% / Rush 61%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|       |      |                             |      |                                                                                                                                                 |
|-------|------|-----------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +2.50 | 61.5 | Miami (OH) OFF vs UMass DEF | 72.7 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|       | 70.0 | Miami (OH) DEF vs UMass OFF | 56.3 |                                                                                                                                                 |

POINTS / GAME

|                                                                                                                                                                    |            |                             |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------|-----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 22.3 (84)  | Miami (OH) OFF vs UMass DEF | 21.7 (44) | -19.5 |
|                                                                                                                                                                    | 34.8 (113) | Miami (OH) DEF vs UMass OFF | 28.7 (55) |       |

YARDS / GAME

|                                                                                                                                                      |             |                             |            |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------------------|------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 354.8 (83)  | Miami (OH) OFF vs UMass DEF | 360.0 (53) | -88.9 |
|                                                                                                                                                      | 455.0 (120) | Miami (OH) DEF vs UMass OFF | 348.7 (86) |       |

YARDS / PLAY

|                                                                                                                                                     |           |                             |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 5.8 (49)  | Miami (OH) OFF vs UMass DEF | 5.0 (43) | -1.90 |
|                                                                                                                                                     | 6.5 (118) | Miami (OH) DEF vs UMass OFF | 6.2 (32) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

|       |       |
|-------|-------|
| +4.08 | +4.94 |
|-------|-------|

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                             |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 91.7 (35)  | Miami (OH) OFF vs UMass DEF | 75.0 (24) | -14.5 |
|                                                                                                                                  | 92.3 (108) | Miami (OH) DEF vs UMass OFF | 88.9 (51) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                             |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|-----------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 34.7 (95)  | Miami (OH) OFF vs UMass DEF | 50.0 (123) | -7.25 |
|                                                                                                                   | 50.0 (123) | Miami (OH) DEF vs UMass OFF | 41.9 (55)  |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                             |             |                             |             |             |
|-----------------------------|-------------|-----------------------------|-------------|-------------|
| +86.0<br>head-to-head +36.2 | 279.8 (25)  | Miami (OH) OFF vs UMass DEF | 253.0 (101) | 169.3 (114) |
|                             | 327.3 (137) | Miami (OH) DEF vs UMass OFF |             |             |

PASS YARDS / ATTEMPT

|           |                             |          |                                    |
|-----------|-----------------------------|----------|------------------------------------|
| 9.2 (10)  | Miami (OH) OFF vs UMass DEF | 6.8 (49) | <b>+1.36</b><br>head-to-head +0.20 |
| 8.4 (107) | Miami (OH) DEF vs UMass OFF | 7.8 (50) |                                    |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                     |           |
|-----------|---------------------|-----------|
| 87.5 (12) | Miami (OH) vs UMass | 81.0 (34) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                             |            |
|----------------------|-----------------------------|------------|
| 56.8 (55)            | Miami (OH) OFF vs UMass DEF | 45.8 (42)  |
| 24.2 (7)             | Miami (OH) DEF vs UMass OFF | 33.2 (103) |

| SACKS ALLOWED / GAME               |           |                             |          |
|------------------------------------|-----------|-----------------------------|----------|
| <b>-7.93</b><br>head-to-head +2.35 | 3.0 (113) | Miami (OH) OFF vs UMass DEF | 3.0 (20) |
|                                    | 1.80 (74) | Miami (OH) DEF vs UMass OFF | 0.30 (2) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                     |      |
|--------------|---------------------|------|
| 62.0         | Miami (OH) vs UMass | 76.9 |

| QB RUSH YARDS / GAME |                     |    |
|----------------------|---------------------|----|
| --                   | Miami (OH) vs UMass | -- |

| PASSING EXPLOSIVENESS |           |                             |                                    |
|-----------------------|-----------|-----------------------------|------------------------------------|
|                       | 1.39 (11) | Miami (OH) OFF vs UMass DEF | 1.06 (14)                          |
|                       | 1.26 (84) | Miami (OH) DEF vs UMass OFF | 1.20 (86)                          |
|                       |           |                             | <b>-0.00</b><br>head-to-head +0.01 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                             |      |
|----------------------|-----------------------------|------|
| 0.50                 | Miami (OH) OFF vs UMass DEF | --   |
| --                   | Miami (OH) DEF vs UMass OFF | 0.30 |

| RUSHING GAME |  |  |  |
|--------------|--|--|--|
|--------------|--|--|--|

| RUSH YARDS / GAME |            |                             |                                     |
|-------------------|------------|-----------------------------|-------------------------------------|
|                   | 75.0 (136) | Miami (OH) OFF vs UMass DEF | 107.0 (26)                          |
|                   | 127.8 (46) | Miami (OH) DEF vs UMass OFF | 179.3 (45)                          |
|                   |            |                             | <b>+4.01</b><br>head-to-head +125.1 |

| RUSH YARDS / ATTEMPT |            |                             |                                    |
|----------------------|------------|-----------------------------|------------------------------------|
|                      | 2.70 (132) | Miami (OH) OFF vs UMass DEF | 3.3 (25)                           |
|                      | 4.4 (79)   | Miami (OH) DEF vs UMass OFF | 5.2 (17)                           |
|                      |            |                             | <b>+1.24</b><br>head-to-head +3.60 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                             |           |
|------------|-----------------------------|-----------|
| 0.00 (1)   | Miami (OH) OFF vs UMass DEF | 2.80 (96) |
| 2.60 (102) | Miami (OH) DEF vs UMass OFF | 0.00 (1)  |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|                                                                                                                                              |           |                             |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.0 (82)  | Miami (OH) OFF vs UMass DEF | 2.77 (60) | -0.40 |
|                                                                                                                                              | 2.75 (53) | Miami (OH) DEF vs UMass OFF | 3.4 (26)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|            |                             |            |       |
|------------|-----------------------------|------------|-------|
| 0.69 (98)  | Miami (OH) OFF vs UMass DEF | 0.67 (36)  | -0.34 |
| 0.81 (115) | Miami (OH) DEF vs UMass OFF | 0.62 (119) |       |

head-to-head +7.55

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|                                                                                                                                            |           |                             |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.18 (85) | Miami (OH) OFF vs UMass DEF | 0.22 (41) | -2.16 |
|                                                                                                                                            | 0.22 (32) | Miami (OH) DEF vs UMass OFF | 0.16 (50) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|            |                             |           |       |
|------------|-----------------------------|-----------|-------|
| 0.15 (80)  | Miami (OH) OFF vs UMass DEF | 0.14 (88) | +8.33 |
| 0.12 (128) | Miami (OH) DEF vs UMass OFF | 0.11 (16) |       |

head-to-head +7.10

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|            |                             |           |       |
|------------|-----------------------------|-----------|-------|
| 0.98 (108) | Miami (OH) OFF vs UMass DEF | 0.70 (12) | +0.13 |
| 0.97 (70)  | Miami (OH) DEF vs UMass OFF | 1.26 (33) |       |

head-to-head +0.56

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|           |                             |           |       |
|-----------|-----------------------------|-----------|-------|
| 0.89 (99) | Miami (OH) OFF vs UMass DEF | 0.30 (6)  | +0.16 |
| 1.17 (85) | Miami (OH) DEF vs UMass OFF | 1.34 (58) |       |

head-to-head +1.32

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.66 (102) | F+   | -1.21 (124) |
| -0.45 (89)  | OF+  | -1.13 (119) |
| -0.83 (105) | DF+  | -1.14 (123) |
| -0.50 (101) | FEI  | -1.11 (133) |
| -0.21 (86)  | OFEI | -0.58 (131) |
| -0.31 (115) | DFEI | -0.52 (135) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.58**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.61**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |           |
|------------|-------------------------|-----------|
| -0.06 (88) | NET SUCCESS RATE        | 0.15 (35) |
| 0.49 (44)  | OFF SUCCESS RATE (OSR)  | 0.54 (28) |
| 0.55 (113) | OPP SUCCESS RATE (DSR)  | 0.39 (53) |
| 0.42 (93)  | OFF SUCCESS RATE (CFBD) | 0.46 (48) |
| 0.46 (123) | DEF SUCCESS RATE (CFBD) | 0.40 (73) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.21**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.24**

head-to-head +0.21

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.19 (55)  | OFF PPA         | 0.24 (41)  |
| 0.17 (114) | DEF PPA ALLOWED | -0.04 (33) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.20**

head-to-head +0.26

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| +23.9         | 378.5 (63) | Texas OFF vs Oklahoma DEF | 238.0 (3)   | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               |
|               | 271.3 (11) | Texas DEF vs Oklahoma OFF | 321.3 (105) |                                                                                                                                                                    |
| YARDS / PLAY  |            |                           |             |                                                                                                                                                                    |
| +0.10         | 5.1 (87)   | Texas OFF vs Oklahoma DEF | 4.0 (7)     | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|               | 4.0 (7)    | Texas DEF vs Oklahoma OFF | 5.0 (92)    |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +40.5                                          | +9.09 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |           |                           |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|-----------|---------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 89.5 (50) | Texas OFF vs Oklahoma DEF | 60.0 (3)  | -12.2 |
|                                                                                                                                  | 72.7 (20) | Texas DEF vs Oklahoma OFF | 88.9 (51) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN % |           |                           |            |                                                                                                                   |
|------------|-----------|---------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +5.19      | 50.0 (12) | Texas OFF vs Oklahoma DEF | 23.1 (2)   | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|            | 33.9 (33) | Texas DEF vs Oklahoma OFF | 34.0 (100) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME         |            |                           |            |                                                |
|----------------------|------------|---------------------------|------------|------------------------------------------------|
| PASS YARDS / GAME    |            |                           |            |                                                |

| PASS YARDS / ATTEMPT |            |                           |            |                                                |

|          |                           |          |                    |
|----------|---------------------------|----------|--------------------|
| 7.5 (61) | Texas OFF vs Oklahoma DEF | 6.0 (12) | -1.04              |
| 5.9 (9)  | Texas DEF vs Oklahoma OFF | 7.9 (47) | head-to-head +0.30 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                   |            |
|-----------|-------------------|------------|
| 60.2 (94) | Texas vs Oklahoma | 49.7 (120) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                           |            |
|----------------------|---------------------------|------------|
| 67.2 (32)            | Texas OFF vs Oklahoma DEF | 89.6 (135) |
| 94.6 (138)           | Texas DEF vs Oklahoma OFF | 39.3 (92)  |

| SACKS ALLOWED / GAME |           |                           |           |
|----------------------|-----------|---------------------------|-----------|
| -9.85                | 2.50 (98) | Texas OFF vs Oklahoma DEF | 3.3 (14)  |
| head-to-head +2.17   | 3.8 (3)   | Texas DEF vs Oklahoma OFF | 2.30 (87) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                   |      |
|--------------|-------------------|------|
| 64.5         | Texas vs Oklahoma | 65.2 |

| QB RUSH YARDS / GAME |                   |    |
|----------------------|-------------------|----|
| --                   | Texas vs Oklahoma | -- |

| PASSING EXPLOSIVENESS |            |                           |            |
|-----------------------|------------|---------------------------|------------|
| -0.09                 | 1.14 (114) | Texas OFF vs Oklahoma DEF | 1.24 (71)  |
| head-to-head +0.17    | 1.09 (23)  | Texas DEF vs Oklahoma OFF | 1.11 (121) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                           |      |
|----------------------|---------------------------|------|
| 0.80                 | Texas OFF vs Oklahoma DEF | --   |
| --                   | Texas DEF vs Oklahoma OFF | 1.00 |

## RUSHING GAME

| RUSH YARDS / GAME  |            |                           |            |
|--------------------|------------|---------------------------|------------|
| -40.3              | 147.3 (68) | Texas OFF vs Oklahoma DEF | 115.5 (33) |
| head-to-head +64.3 | 99.5 (18)  | Texas DEF vs Oklahoma OFF | 99.0 (117) |

| RUSH YARDS / ATTEMPT |           |                           |            |
|----------------------|-----------|---------------------------|------------|
| -1.56                | 3.6 (96)  | Texas OFF vs Oklahoma DEF | 3.2 (22)   |
| head-to-head +1.10   | 2.80 (13) | Texas DEF vs Oklahoma OFF | 2.90 (121) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                           |          |
|------------|---------------------------|----------|
| 0.00 (1)   | Texas OFF vs Oklahoma DEF | 5.5 (18) |
| 6.5 (5)    | Texas DEF vs Oklahoma OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |            |                           |            |                                                                                                                                              |
|-------|------------|---------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.02 | 2.82 (108) | Texas OFF vs Oklahoma DEF | 2.36 (16)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 2.55 (26)  | Texas DEF vs Oklahoma OFF | 2.60 (127) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|                             |           |                           |            |
|-----------------------------|-----------|---------------------------|------------|
| -10.5<br>head-to-head +13.8 | 0.75 (60) | Texas OFF vs Oklahoma DEF | 0.58 (18)  |
|                             | 0.73 (76) | Texas DEF vs Oklahoma OFF | 0.46 (136) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|       |           |                           |            |                                                                                                                                            |
|-------|-----------|---------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +4.47 | 0.18 (84) | Texas OFF vs Oklahoma DEF | 0.19 (72)  | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|       | 0.20 (63) | Texas DEF vs Oklahoma OFF | 0.22 (125) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|  |            |                           |           |                             |
|--|------------|---------------------------|-----------|-----------------------------|
|  | 0.17 (117) | Texas OFF vs Oklahoma DEF | 0.22 (12) | -5.67<br>head-to-head +2.40 |
|  | 0.21 (16)  | Texas DEF vs Oklahoma OFF | 0.16 (95) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                             |           |                           |            |
|-----------------------------|-----------|---------------------------|------------|
| -0.17<br>head-to-head +0.19 | 1.17 (56) | Texas OFF vs Oklahoma DEF | 0.76 (22)  |
|                             | 0.94 (53) | Texas DEF vs Oklahoma OFF | 0.80 (132) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|  |            |                           |           |                             |
|--|------------|---------------------------|-----------|-----------------------------|
|  | 0.58 (122) | Texas OFF vs Oklahoma DEF | 1.21 (86) | -0.53<br>head-to-head +0.03 |
|  | 0.89 (54)  | Texas DEF vs Oklahoma OFF | 0.93 (96) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |            |
|-----------|------|------------|
| 1.67 (8)  | F+   | 0.98 (19)  |
| 1.10 (17) | OF+  | -0.06 (73) |
| 2.03 (2)  | DF+  | 1.86 (6)   |
| 1.08 (8)  | FEI  | 0.66 (19)  |
| 0.30 (20) | OFEI | -0.07 (68) |
| 0.76 (1)  | DFEI | 0.65 (6)   |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.48**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.42**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |            |
|-----------|-------------------------|------------|
| 0.17 (30) | NET SUCCESS RATE        | 0.05 (54)  |
| 0.47 (51) | OFF SUCCESS RATE (OSR)  | 0.35 (96)  |
| 0.30 (23) | OPP SUCCESS RATE (DSR)  | 0.30 (23)  |
| 0.46 (51) | OFF SUCCESS RATE (CFBD) | 0.39 (112) |
| 0.35 (26) | DEF SUCCESS RATE (CFBD) | 0.30 (4)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.12**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**-0.08**

head-to-head +0.12

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |             |
|------------|-----------------|-------------|
| 0.11 (83)  | OFF PPA         | -0.05 (128) |
| -0.06 (27) | DEF PPA ALLOWED | -0.18 (1)   |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**-0.29**

head-to-head +0.03

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 336.6 (97)  | Stanford OFF vs Notre Dame DEF | 216.4 (1)  | -334.2 |
|                                                                                                                                                      | 458.8 (124) | Stanford DEF vs Notre Dame OFF | 428.4 (35) |        |

| YARDS / PLAY                                                                                                                                        |           |                                |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 4.9 (102) | Stanford OFF vs Notre Dame DEF | 3.8 (2)  | -4.30 |
|                                                                                                                                                     | 6.4 (111) | Stanford DEF vs Notre Dame OFF | 6.6 (13) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +8.42                                          | +5.12 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |            |                                |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 78.6 (101) | Stanford OFF vs Notre Dame DEF | 80.0 (41) | -28.8 |
|                                                                                                                                  | 95.7 (127) | Stanford DEF vs Notre Dame OFF | 91.7 (35) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 34.2 (98)  | Stanford OFF vs Notre Dame DEF | 37.5 (52) | -19.4 |
|                                                                                                                   | 50.8 (126) | Stanford DEF vs Notre Dame OFF | 40.4 (66) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

| PASS YARDS / GAME |             |                                |            |                               |
|-------------------|-------------|--------------------------------|------------|-------------------------------|
|                   | 247.8 (47)  | Stanford OFF vs Notre Dame DEF | 158.0 (13) | +119.8<br>head-to-head +160.8 |
|                   | 299.8 (133) | Stanford DEF vs Notre Dame OFF | 266.8 (32) |                               |

| PASS YARDS / ATTEMPT |           |                                |          |                    |
|----------------------|-----------|--------------------------------|----------|--------------------|
|                      | 6.8 (88)  | Stanford OFF vs Notre Dame DEF | 6.3 (30) | +2.96              |
|                      | 8.3 (103) | Stanford DEF vs Notre Dame OFF | 9.5 (7)  | head-to-head +4.70 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                        |          |
|-----------|------------------------|----------|
| 62.5 (85) | Stanford vs Notre Dame | 92.8 (5) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                |            |
|----------------------|--------------------------------|------------|
| 34.8 (98)            | Stanford OFF vs Notre Dame DEF | 93.2 (136) |
| 35.7 (19)            | Stanford DEF vs Notre Dame OFF | 85.6 (6)   |

| SACKS ALLOWED / GAME |            |                                |           |  |
|----------------------|------------|--------------------------------|-----------|--|
| -8.56                | 2.20 (86)  | Stanford OFF vs Notre Dame DEF | 2.80 (23) |  |
| head-to-head +0.83   | 1.00 (109) | Stanford DEF vs Notre Dame OFF | 0.40 (5)  |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                        |      |
|--------------|------------------------|------|
| 59.1         | Stanford vs Notre Dame | 70.2 |

| QB RUSH YARDS / GAME |                        |    |
|----------------------|------------------------|----|
| --                   | Stanford vs Notre Dame | -- |

| PASSING EXPLOSIVENESS |            |                                |            |                    |
|-----------------------|------------|--------------------------------|------------|--------------------|
|                       | 1.20 (85)  | Stanford OFF vs Notre Dame DEF | 1.20 (64)  | -0.04              |
|                       | 1.34 (109) | Stanford DEF vs Notre Dame OFF | 1.09 (128) | head-to-head +0.03 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                |      |
|----------------------|--------------------------------|------|
| 0.20                 | Stanford OFF vs Notre Dame DEF | --   |
| --                   | Stanford DEF vs Notre Dame OFF | 0.20 |

## RUSHING GAME

| RUSH YARDS / GAME |            |                                |            |                     |
|-------------------|------------|--------------------------------|------------|---------------------|
|                   | 88.8 (125) | Stanford OFF vs Notre Dame DEF | 58.4 (3)   | +17.5               |
|                   | 159.0 (74) | Stanford DEF vs Notre Dame OFF | 161.6 (52) | head-to-head +173.4 |

| RUSH YARDS / ATTEMPT |            |                                |          |                    |
|----------------------|------------|--------------------------------|----------|--------------------|
|                      | 2.90 (121) | Stanford OFF vs Notre Dame DEF | 2.00 (3) | +0.74              |
|                      | 4.7 (100)  | Stanford DEF vs Notre Dame OFF | 4.4 (54) | head-to-head +4.20 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                |          |
|------------|--------------------------------|----------|
| 0.00 (1)   | Stanford OFF vs Notre Dame DEF | 5.6 (16) |
| 2.60 (102) | Stanford DEF vs Notre Dame OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |            |                                |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.69 (123) | Stanford OFF vs Notre Dame DEF | 2.45 (20) | -1.44 |
|                                                                                                                                              | 3.4 (127)  | Stanford DEF vs Notre Dame OFF | 3.2 (55)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                |           |                             |
|--------------------|------------|--------------------------------|-----------|-----------------------------|
|                    | 0.80 (34)  | Stanford OFF vs Notre Dame DEF | 0.73 (76) | +19.0<br>head-to-head +9.44 |
|                    | 0.85 (126) | Stanford DEF vs Notre Dame OFF | 0.78 (47) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.21 (118) | Stanford OFF vs Notre Dame DEF | 0.23 (25) | -15.9 |
|                                                                                                                                            | 0.14 (124) | Stanford DEF vs Notre Dame OFF | 0.14 (29) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                |           |                             |
|------------|------------|--------------------------------|-----------|-----------------------------|
|            | 0.14 (56)  | Stanford OFF vs Notre Dame DEF | 0.24 (6)  | +8.63<br>head-to-head +15.3 |
|            | 0.12 (126) | Stanford DEF vs Notre Dame OFF | 0.10 (12) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                |            |                             |
|-----------------|------------|--------------------------------|------------|-----------------------------|
|                 | 0.68 (137) | Stanford OFF vs Notre Dame DEF | 0.63 (7)   | +0.02<br>head-to-head +0.82 |
|                 | 1.27 (124) | Stanford DEF vs Notre Dame OFF | 0.86 (126) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                |            |                             |
|------------------|------------|--------------------------------|------------|-----------------------------|
|                  | 0.55 (125) | Stanford OFF vs Notre Dame DEF | 0.20 (1)   | -0.55<br>head-to-head +1.06 |
|                  | 1.21 (87)  | Stanford DEF vs Notre Dame OFF | 0.59 (121) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |          |
|-------------|------|----------|
| -0.90 (110) | F+   | 2.14 (3) |
| -0.67 (100) | OF+  | 1.97 (5) |
| -1.00 (118) | DF+  | 1.97 (4) |
| -0.56 (105) | FEI  | 1.44 (2) |
| -0.24 (90)  | OFEI | 0.67 (4) |
| -0.32 (117) | DFEI | 0.73 (3) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-1.96**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 = lopsided edge, -0.50 to +0.50 = close.

**-2.00**

|             |                         |           |
|-------------|-------------------------|-----------|
| -0.20 (110) | NET SUCCESS RATE        | 0.47 (1)  |
| 0.33 (98)   | OFF SUCCESS RATE (OSR)  | 0.68 (3)  |
| 0.53 (108)  | OPP SUCCESS RATE (DSR)  | 0.22 (4)  |
| 0.38 (120)  | OFF SUCCESS RATE (CFBD) | 0.52 (6)  |
| 0.49 (133)  | DEF SUCCESS RATE (CFBD) | 0.35 (24) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.66**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.37**

head-to-head +0.66

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.07 (107) | OFF PPA         | 0.32 (16)  |
| 0.33 (137) | DEF PPA ALLOWED | -0.07 (22) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.44**

head-to-head +0.64

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|       |      |                                   |      |                                                                                                                                                 |
|-------|------|-----------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +3.30 | 68.5 | Mississippi OFF vs Vanderbilt DEF | 70.0 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|       | 70.3 | Mississippi DEF vs Vanderbilt OFF | 65.5 |                                                                                                                                                 |

POINTS / GAME

|       |           |                                   |           |                                                                                                                                                                    |
|-------|-----------|-----------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +8.90 | 35.5 (19) | Mississippi OFF vs Vanderbilt DEF | 29.0 (82) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 30.8 (96) | Mississippi DEF vs Vanderbilt OFF | 24.8 (73) |                                                                                                                                                                    |

YARDS / GAME

|       |            |                                   |            |                                                                                                                                                      |
|-------|------------|-----------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +80.7 | 440.0 (28) | Mississippi OFF vs Vanderbilt DEF | 383.5 (68) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|       | 404.8 (91) | Mississippi DEF vs Vanderbilt OFF | 338.0 (93) |                                                                                                                                                      |

YARDS / PLAY

|       |          |                                   |          |                                                                                                                                                     |
|-------|----------|-----------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +0.90 | 6.4 (21) | Mississippi OFF vs Vanderbilt DEF | 5.5 (66) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 5.8 (83) | Mississippi DEF vs Vanderbilt OFF | 5.2 (77) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +6.18                                          | -2.35 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                   |           |                                                                                                                                  |
|-------|-----------|-----------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +13.8 | 100.0 (1) | Mississippi OFF vs Vanderbilt DEF | 84.6 (64) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 87.5 (75) | Mississippi DEF vs Vanderbilt OFF | 83.3 (76) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |            |                                   |            |                                                                                                                   |
|-------|------------|-----------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +8.55 | 43.5 (42)  | Mississippi OFF vs Vanderbilt DEF | 42.9 (99)  | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 43.9 (103) | Mississippi DEF vs Vanderbilt OFF | 33.9 (101) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                               |            |                                   |            |
|-------------------------------|------------|-----------------------------------|------------|
| +114.5<br>head-to-head +120.5 | 322.5 (4)  | Mississippi OFF vs Vanderbilt DEF | 238.8 (84) |
|                               | 210.0 (54) | Mississippi DEF vs Vanderbilt OFF | 230.8 (62) |

| PASS YARDS / ATTEMPT               |          |                                   |          |
|------------------------------------|----------|-----------------------------------|----------|
| <b>+0.96</b><br>head-to-head +0.50 | 8.4 (33) | Mississippi OFF vs Vanderbilt DEF | 7.4 (68) |
|                                    | 7.9 (88) | Mississippi DEF vs Vanderbilt OFF | 7.4 (64) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                           |           |
|-----------|---------------------------|-----------|
| 79.6 (41) | Mississippi vs Vanderbilt | 70.1 (60) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                   |           |
|----------------------|-----------------------------------|-----------|
| 78.1 (15)            | Mississippi OFF vs Vanderbilt DEF | 57.4 (69) |
| 55.5 (63)            | Mississippi DEF vs Vanderbilt OFF | 52.8 (61) |

| SACKS ALLOWED / GAME |                                   |           |                                    |
|----------------------|-----------------------------------|-----------|------------------------------------|
| 1.00 (15)            | Mississippi OFF vs Vanderbilt DEF | 2.30 (48) | <b>-9.16</b><br>head-to-head +2.23 |
| 1.50 (88)            | Mississippi DEF vs Vanderbilt OFF | 2.30 (87) |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                           |      |
|--------------|---------------------------|------|
| 69.3         | Mississippi vs Vanderbilt | 58.9 |

| QB RUSH YARDS / GAME |                           |    |
|----------------------|---------------------------|----|
| --                   | Mississippi vs Vanderbilt | -- |

| PASSING EXPLOSIVENESS              |            |                                   |           |
|------------------------------------|------------|-----------------------------------|-----------|
| <b>-0.02</b><br>head-to-head +0.05 | 1.16 (101) | Mississippi OFF vs Vanderbilt DEF | 1.28 (89) |
|                                    | 1.14 (34)  | Mississippi DEF vs Vanderbilt OFF | 1.24 (68) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                   |      |
|----------------------|-----------------------------------|------|
| 1.00                 | Mississippi OFF vs Vanderbilt DEF | --   |
| --                   | Mississippi DEF vs Vanderbilt OFF | 1.00 |

| RUSHING GAME                |             |                                   |             |                             |
|-----------------------------|-------------|-----------------------------------|-------------|-----------------------------|
| RUSH YARDS / GAME           |             |                                   |             |                             |
|                             | 117.5 (96)  | Mississippi OFF vs Vanderbilt DEF | 144.8 (60)  | -0.99<br>head-to-head +39.8 |
|                             | 194.8 (115) | Mississippi DEF vs Vanderbilt OFF | 107.3 (108) |                             |
| RUSH YARDS / ATTEMPT        |             |                                   |             |                             |
| -0.26<br>head-to-head +0.20 | 4.0 (78)    | Mississippi OFF vs Vanderbilt DEF | 4.1 (56)    |                             |
|                             | 4.6 (87)    | Mississippi DEF vs Vanderbilt OFF | 3.3 (107)   |                             |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                   |          |
|------------|-----------------------------------|----------|
| 0.00 (1)   | Mississippi OFF vs Vanderbilt DEF | 4.0 (63) |
| 4.5 (45)   | Mississippi DEF vs Vanderbilt OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                                   |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.94 (98) | Mississippi OFF vs Vanderbilt DEF | 2.69 (48) | -0.32 |
|                                                                                                                                              | 2.90 (75) | Mississippi DEF vs Vanderbilt OFF | 3.0 (76)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                   |            |                             |
|--------------------|------------|-----------------------------------|------------|-----------------------------|
|                    | 0.76 (58)  | Mississippi OFF vs Vanderbilt DEF | 0.77 (100) | +17.2<br>head-to-head +8.06 |
|                    | 0.82 (116) | Mississippi DEF vs Vanderbilt OFF | 0.79 (38)  |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                   |           |                                                                                                                                            |
|------------|-----------|-----------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +1.28      | 0.18 (72) | Mississippi OFF vs Vanderbilt DEF | 0.18 (83) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|            | 0.22 (38) | Mississippi DEF vs Vanderbilt OFF | 0.15 (45) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                   |           |                             |
|------------|------------|-----------------------------------|-----------|-----------------------------|
|            | 0.13 (37)  | Mississippi OFF vs Vanderbilt DEF | 0.15 (78) | +3.93<br>head-to-head +1.50 |
|            | 0.13 (109) | Mississippi DEF vs Vanderbilt OFF | 0.14 (56) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                   |            |  |
|-----------------------------|-----------|-----------------------------------|------------|--|
| -0.01<br>head-to-head +0.12 | 1.08 (77) | Mississippi OFF vs Vanderbilt DEF | 1.01 (87)  |  |
|                             | 0.98 (73) | Mississippi DEF vs Vanderbilt OFF | 0.99 (104) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |            |                                   |            |  |
|-----------------------------|------------|-----------------------------------|------------|--|
| -0.47<br>head-to-head +0.01 | 0.58 (123) | Mississippi OFF vs Vanderbilt DEF | 1.30 (97)  |  |
|                             | 1.37 (102) | Mississippi DEF vs Vanderbilt OFF | 0.50 (131) |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.95 (21) | F+   | 0.42 (54) |
| 1.53 (10) | OF+  | 0.60 (43) |
| 0.07 (65) | DF+  | 0.10 (62) |
| 0.70 (17) | FEI  | 0.30 (43) |
| 0.54 (10) | OFEI | 0.24 (27) |
| 0.09 (56) | DFEI | 0.03 (62) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.36**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.40**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |            |
|------------|-------------------------|------------|
| 0.06 (49)  | NET SUCCESS RATE        | -0.03 (78) |
| 0.61 (10)  | OFF SUCCESS RATE (OSR)  | 0.38 (85)  |
| 0.55 (115) | OPP SUCCESS RATE (DSR)  | 0.41 (68)  |
| 0.52 (9)   | OFF SUCCESS RATE (CFBD) | 0.40 (105) |
| 0.47 (126) | DEF SUCCESS RATE (CFBD) | 0.40 (69)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.09**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.18**

head-to-head +0.09

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.25 (32)  | OFF PPA         | 0.09 (96) |
| 0.22 (125) | DEF PPA ALLOWED | 0.07 (74) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.11**

head-to-head +0.00

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI 10.3

UCLA

SOR 20

at

SOR 23

OREGON

FPI 21.6

4-0

Oregon 39.3 - UCLA 25.6 (73% Oregon)

3-1

Pass 38% / Rush 62%

Pass 54% / Rush 46%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN                                                                                                                                       |            |                        |             |                                                                                                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAYS / GAME                                                                                                                                    |            |                        |             |                                                                                                                                                                    |
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 67.3       | UCLA OFF vs Oregon DEF | 76.0        | -3.70                                                                                                                                                              |
|                                                                                                                                                 | 70.0       | UCLA DEF vs Oregon OFF | 65.0        |                                                                                                                                                                    |

| YARDS / PLAY                                                                                                                                    |            |                        |             |                                                                                                                                                                    |
| +1.70                                                                                                                                           | 7.2 (4)    | UCLA OFF vs Oregon DEF | 5.6 (70)    | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|                                                                                                                                                 | 4.5 (14)   | UCLA DEF vs Oregon OFF | 6.6 (13)    |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| +6.95                                          | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |           |                        |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 85.0 (69) | UCLA OFF vs Oregon DEF | 87.5 (75) | -18.4 |
|                                                                                                                                  | 90.9 (99) | UCLA DEF vs Oregon OFF | 100.0 (1) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN % |           |                        |           |                                                                                                                   |
|------------|-----------|------------------------|-----------|-------------------------------------------------------------------------------------------------------------------|
| +5.74      | 48.9 (22) | UCLA OFF vs Oregon DEF | 25.6 (6)  | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|            | 29.3 (15) | UCLA DEF vs Oregon OFF | 39.5 (75) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME         |            |                        |             |                             |
|----------------------|------------|------------------------|-------------|-----------------------------|
| PASS YARDS / GAME    |            |                        |             |                             |
|                      | 205.0 (87) | UCLA OFF vs Oregon DEF | 274.7 (121) | +90.7<br>head-to-head +57.8 |
|                      | 225.8 (71) | UCLA DEF vs Oregon OFF | 311.7 (8)   |                             |
| PASS YARDS / ATTEMPT |            |                        |             |                             |

|          |                        |          |                                    |
|----------|------------------------|----------|------------------------------------|
| 8.1 (39) | UCLA OFF vs Oregon DEF | 7.2 (61) | <b>+1.06</b><br>head-to-head +0.60 |
| 6.7 (44) | UCLA DEF vs Oregon OFF | 9.2 (10) |                                    |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                |           |
|------------|----------------|-----------|
| 43.1 (127) | UCLA vs Oregon | 79.4 (45) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                        |            |
|----------------------|------------------------|------------|
| 72.8 (23)            | UCLA OFF vs Oregon DEF | 77.1 (114) |
| 73.6 (105)           | UCLA DEF vs Oregon OFF | 74.9 (20)  |

| SACKS ALLOWED / GAME               |           |                        |           |
|------------------------------------|-----------|------------------------|-----------|
| <b>-7.16</b><br>head-to-head +3.42 | 1.50 (42) | UCLA OFF vs Oregon DEF | 1.70 (84) |
|                                    | 2.30 (48) | UCLA DEF vs Oregon OFF | 1.70 (57) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                |      |
|--------------|----------------|------|
| 61.4         | UCLA vs Oregon | 67.7 |

| QB RUSH YARDS / GAME |                |    |
|----------------------|----------------|----|
| --                   | UCLA vs Oregon | -- |

| PASSING EXPLOSIVENESS |            |                        |                                    |
|-----------------------|------------|------------------------|------------------------------------|
|                       | 1.25 (63)  | UCLA OFF vs Oregon DEF | 1.24 (77)                          |
|                       | 1.35 (113) | UCLA DEF vs Oregon OFF | 1.41 (9)                           |
|                       |            |                        | <b>+0.30</b><br>head-to-head +0.27 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                        |      |
|----------------------|------------------------|------|
| 0.50                 | UCLA OFF vs Oregon DEF | --   |
| --                   | UCLA DEF vs Oregon OFF | 0.00 |

| RUSHING GAME                         |           |                        |            |
|--------------------------------------|-----------|------------------------|------------|
| RUSH YARDS / GAME                    |           |                        |            |
| <b>+128.4</b><br>head-to-head +224.5 | 281.5 (2) | UCLA OFF vs Oregon DEF | 150.0 (66) |
|                                      | 91.3 (14) | UCLA DEF vs Oregon OFF | 115.7 (99) |
| RUSH YARDS / ATTEMPT                 |           |                        |            |
| <b>+2.74</b><br>head-to-head +4.50   | 7.0 (1)   | UCLA OFF vs Oregon DEF | 4.1 (56)   |
|                                      | 2.70 (11) | UCLA DEF vs Oregon OFF | 3.9 (83)   |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                        |           |
|------------|------------------------|-----------|
| 0.00 (1)   | UCLA OFF vs Oregon DEF | 2.80 (96) |
| 3.5 (82)   | UCLA DEF vs Oregon OFF | 0.00 (1)  |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |           |                        |           |                                                                                                                                              |
|-------|-----------|------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.94 | 4.0 (1)   | UCLA OFF vs Oregon DEF | 2.68 (47) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 2.36 (17) | UCLA DEF vs Oregon OFF | 3.4 (32)  |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |            |                        |           |                             |
|--|------------|------------------------|-----------|-----------------------------|
|  | 0.84 (13)  | UCLA OFF vs Oregon DEF | 0.75 (85) | +20.5<br>head-to-head +5.08 |
|  | 0.83 (119) | UCLA DEF vs Oregon OFF | 0.81 (29) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|       |           |                        |           |                                                                                                                                            |
|-------|-----------|------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +9.17 | 0.10 (2)  | UCLA OFF vs Oregon DEF | 0.18 (80) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|       | 0.25 (14) | UCLA DEF vs Oregon OFF | 0.12 (15) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                             |           |                        |           |
|-----------------------------|-----------|------------------------|-----------|
| +1.73<br>head-to-head +0.30 | 0.13 (45) | UCLA OFF vs Oregon DEF | 0.16 (73) |
|                             | 0.18 (29) | UCLA DEF vs Oregon OFF | 0.11 (16) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                             |           |                        |           |
|-----------------------------|-----------|------------------------|-----------|
| +0.15<br>head-to-head +0.37 | 1.57 (1)  | UCLA OFF vs Oregon DEF | 0.69 (11) |
|                             | 0.84 (31) | UCLA DEF vs Oregon OFF | 1.05 (86) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                             |          |                        |            |
|-----------------------------|----------|------------------------|------------|
| +1.00<br>head-to-head +2.25 | 2.45 (4) | UCLA OFF vs Oregon DEF | 0.91 (60)  |
|                             | 0.23 (2) | UCLA DEF vs Oregon OFF | 0.87 (101) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.91 (27) | F+   | 1.61 (9)  |
| 1.07 (21) | OF+  | 1.76 (8)  |
| 0.46 (44) | DF+  | 1.10 (21) |
| 0.50 (34) | FEI  | 1.06 (9)  |
| 0.29 (23) | OFEI | 0.57 (8)  |
| 0.12 (51) | DFEI | 0.41 (19) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.57**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.56**

|           |                         |            |
|-----------|-------------------------|------------|
| 0.26 (14) | NET SUCCESS RATE        | -0.04 (86) |
| 0.54 (26) | OFF SUCCESS RATE (OSR)  | 0.52 (35)  |
| 0.29 (19) | OPP SUCCESS RATE (DSR)  | 0.56 (117) |
| 0.49 (22) | OFF SUCCESS RATE (CFBD) | 0.48 (37)  |
| 0.33 (12) | DEF SUCCESS RATE (CFBD) | 0.37 (47)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.30**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.25**

head-to-head +0.30

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.29 (23) | OFF PPA         | 0.33 (11)  |
| -0.13 (6) | DEF PPA ALLOWED | -0.00 (48) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.07**

head-to-head +0.08

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 43% / Rush 57%

Pass 51% / Rush 49%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|       |      |                              |      |                                                                                                                                                 |
|-------|------|------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +9.50 | 73.0 | Houston OFF vs Kansas St DEF | 57.0 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|       | 66.5 | Houston DEF vs Kansas St OFF | 73.0 |                                                                                                                                                 |

POINTS / GAME

|                                                                                                                                                                    |           |                              |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------------|-----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 32.0 (41) | Houston OFF vs Kansas St DEF | 19.3 (34) | -2.30 |
|                                                                                                                                                                    | 23.3 (50) | Houston DEF vs Kansas St OFF | 30.3 (51) |       |

YARDS / GAME

|                                                                                                                                                      |            |                              |            |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------|------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 456.3 (22) | Houston OFF vs Kansas St DEF | 287.3 (19) | -88.9 |
|                                                                                                                                                      | 378.5 (63) | Houston DEF vs Kansas St OFF | 454.0 (23) |       |

YARDS / PLAY

|                                                                                                                                                     |          |                              |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|------------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 6.3 (25) | Houston OFF vs Kansas St DEF | 5.0 (43) | -0.60 |
|                                                                                                                                                     | 5.7 (76) | Houston DEF vs Kansas St OFF | 6.2 (32) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| --                                             | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |             |                              |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|-------------|------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 80.0 (94)   | Houston OFF vs Kansas St DEF | 66.7 (7)  | -47.1 |
|                                                                                                                                  | 100.0 (128) | Houston DEF vs Kansas St OFF | 93.8 (23) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |           |                              |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 60.4 (2)  | Houston OFF vs Kansas St DEF | 36.8 (50) | -4.38 |
|                                                                                                                   | 40.4 (78) | Houston DEF vs Kansas St OFF | 61.2 (1)  |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |             |                              |            |                              |
|--|-------------|------------------------------|------------|------------------------------|
|  | 266.5 (33)  | Houston OFF vs Kansas St DEF | 131.7 (4)  | +85.5<br>head-to-head +134.1 |
|  | 295.3 (126) | Houston DEF vs Kansas St OFF | 237.0 (56) |                              |

PASS YARDS / ATTEMPT

|                    |          |                              |           |
|--------------------|----------|------------------------------|-----------|
| <b>+0.46</b>       | 8.6 (25) | Houston OFF vs Kansas St DEF | 6.7 (44)  |
| head-to-head +1.30 | 7.7 (78) | Houston DEF vs Kansas St OFF | 6.3 (107) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                      |           |
|-----------|----------------------|-----------|
| 85.9 (21) | Houston vs Kansas St | 89.3 (10) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                              |           |
|----------------------|------------------------------|-----------|
| 78.4 (14)            | Houston OFF vs Kansas St DEF | 68.3 (94) |
| 57.7 (70)            | Houston DEF vs Kansas St OFF | 69.0 (30) |

| SACKS ALLOWED / GAME |                              |          |                                    |
|----------------------|------------------------------|----------|------------------------------------|
| 1.30 (30)            | Houston OFF vs Kansas St DEF | 3.7 (5)  | <b>-4.11</b><br>head-to-head +0.75 |
| 2.30 (48)            | Houston DEF vs Kansas St OFF | 0.00 (1) |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                      |      |
|--------------|----------------------|------|
| 66.1         | Houston vs Kansas St | 65.2 |

| QB RUSH YARDS / GAME |                      |    |
|----------------------|----------------------|----|
| --                   | Houston vs Kansas St | -- |

| PASSING EXPLOSIVENESS |                              |            |                                    |
|-----------------------|------------------------------|------------|------------------------------------|
| 1.05 (134)            | Houston OFF vs Kansas St DEF | 1.50 (137) | <b>+0.17</b><br>head-to-head +0.09 |
| 1.42 (128)            | Houston DEF vs Kansas St OFF | 1.21 (76)  |                                    |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                              |      |
|----------------------|------------------------------|------|
| 0.30                 | Houston OFF vs Kansas St DEF | --   |
| --                   | Houston DEF vs Kansas St OFF | 0.70 |

## RUSHING GAME

| RUSH YARDS / GAME  |            |                              |            |
|--------------------|------------|------------------------------|------------|
| <b>+42.4</b>       | 189.8 (33) | Houston OFF vs Kansas St DEF | 155.7 (70) |
| head-to-head +45.2 | 83.3 (11)  | Houston DEF vs Kansas St OFF | 217.0 (15) |

| RUSH YARDS / ATTEMPT |          |                              |          |
|----------------------|----------|------------------------------|----------|
| <b>+0.94</b>         | 4.7 (40) | Houston OFF vs Kansas St DEF | 4.6 (87) |
| head-to-head +0.00   | 3.2 (22) | Houston DEF vs Kansas St OFF | 6.1 (3)  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                              |          |
|------------|------------------------------|----------|
| 0.00 (1)   | Houston OFF vs Kansas St DEF | 8.0 (1)  |
| 4.2 (53)   | Houston DEF vs Kansas St OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|              |           |                              |           |                                                                                                                                              |
|--------------|-----------|------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.49</b> | 3.7 (6)   | Houston OFF vs Kansas St DEF | 2.51 (24) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|              | 2.32 (13) | Houston DEF vs Kansas St OFF | 3.4 (29)  |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |           |                              |           |                                    |
|--|-----------|------------------------------|-----------|------------------------------------|
|  | 0.82 (21) | Houston OFF vs Kansas St DEF | 0.42 (2)  | <b>-8.78</b><br>head-to-head +11.3 |
|  | 0.59 (21) | Houston DEF vs Kansas St OFF | 0.76 (55) |                                    |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|              |           |                              |           |                                                                                                                                            |
|--------------|-----------|------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.10</b> | 0.11 (5)  | Houston OFF vs Kansas St DEF | 0.26 (10) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|              | 0.23 (26) | Houston DEF vs Kansas St OFF | 0.13 (24) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|  |           |                              |          |                                    |
|--|-----------|------------------------------|----------|------------------------------------|
|  | 0.10 (10) | Houston OFF vs Kansas St DEF | 0.24 (5) | <b>+1.03</b><br>head-to-head +4.00 |
|  | 0.21 (14) | Houston DEF vs Kansas St OFF | 0.08 (4) |                                    |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                                    |           |                              |            |
|------------------------------------|-----------|------------------------------|------------|
| <b>+0.55</b><br>head-to-head +0.70 | 1.31 (24) | Houston OFF vs Kansas St DEF | 1.35 (134) |
|                                    | 0.62 (6)  | Houston DEF vs Kansas St OFF | 1.34 (20)  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|  |           |                              |            |                                    |
|--|-----------|------------------------------|------------|------------------------------------|
|  | 1.13 (78) | Houston OFF vs Kansas St DEF | 1.43 (108) | <b>+0.66</b><br>head-to-head +0.44 |
|  | 0.72 (34) | Houston DEF vs Kansas St OFF | 2.29 (8)   |                                    |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.81 (33) | F+   | 1.00 (18) |
| 1.23 (13) | OF+  | 1.10 (17) |
| 0.30 (51) | DF+  | 0.79 (30) |
| 0.33 (42) | FEI  | 0.64 (20) |
| 0.34 (17) | OFEI | 0.35 (15) |
| 0.02 (63) | DFEI | 0.32 (27) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.31**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.31**

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.21 (23) | NET SUCCESS RATE        | 0.24 (17) |
| 0.56 (20) | OFF SUCCESS RATE (OSR)  | 0.57 (16) |
| 0.36 (42) | OPP SUCCESS RATE (DSR)  | 0.33 (37) |
| 0.56 (1)  | OFF SUCCESS RATE (CFBD) | 0.51 (11) |
| 0.37 (49) | DEF SUCCESS RATE (CFBD) | 0.30 (5)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.03**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.08**

head-to-head +0.03

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.35 (7)  | OFF PPA         | 0.31 (17)  |
| 0.09 (84) | DEF PPA ALLOWED | -0.04 (34) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.19**

head-to-head +0.09

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| +170.4 | 409.0 (46) | Duke OFF vs Georgia Tech DEF | 412.0 (96) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|        | 292.3 (21) | Duke DEF vs Georgia Tech OFF | 358.3 (80) |                                                                                                                                                      |

YARDS / PLAY

|       |          |                              |          |                                                                                                                                                     |
|-------|----------|------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.90 | 6.0 (43) | Duke OFF vs Georgia Tech DEF | 5.7 (76) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 4.6 (16) | Duke DEF vs Georgia Tech OFF | 5.2 (77) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +11.6                                          | +5.23 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                              |            |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------|------------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 78.6 (101) | Duke OFF vs Georgia Tech DEF | 75.0 (24)  | -1.43 |
|                                                                                                                                  | 80.0 (41)  | Duke DEF vs Georgia Tech OFF | 75.0 (109) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                              |            |                                                                                                                   |
|-------|-----------|------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +13.7 | 36.8 (86) | Duke OFF vs Georgia Tech DEF | 44.4 (108) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 27.0 (10) | Duke DEF vs Georgia Tech OFF | 40.5 (65)  |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |             |                              |            |                             |
|--|-------------|------------------------------|------------|-----------------------------|
|  | 179.7 (106) | Duke OFF vs Georgia Tech DEF | 222.7 (67) | +8.19<br>head-to-head +52.6 |
|  | 213.0 (58)  | Duke DEF vs Georgia Tech OFF | 242.0 (51) |                             |

| PASS YARDS / ATTEMPT               |          |                              |          |
|------------------------------------|----------|------------------------------|----------|
| <b>+0.46</b><br>head-to-head +2.00 | 7.3 (68) | Duke OFF vs Georgia Tech DEF | 8.0 (90) |
|                                    | 6.3 (30) | Duke DEF vs Georgia Tech OFF | 7.0 (82) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                      |           |
|------------|----------------------|-----------|
| 57.7 (100) | Duke vs Georgia Tech | 60.7 (91) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                              |           |
|----------------------|------------------------------|-----------|
| 57.1 (54)            | Duke OFF vs Georgia Tech DEF | 45.3 (40) |
| 79.5 (119)           | Duke DEF vs Georgia Tech OFF | 49.8 (69) |

| SACKS ALLOWED / GAME |           |                              |                                    |
|----------------------|-----------|------------------------------|------------------------------------|
|                      | 0.30 (2)  | Duke OFF vs Georgia Tech DEF | 1.00 (109)                         |
|                      | 2.30 (48) | Duke DEF vs Georgia Tech OFF | 3.0 (113)                          |
|                      |           |                              | <b>-7.36</b><br>head-to-head +5.30 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                      |      |
|--------------|----------------------|------|
| 56.8         | Duke vs Georgia Tech | 67.0 |

| QB RUSH YARDS / GAME |                      |    |
|----------------------|----------------------|----|
| --                   | Duke vs Georgia Tech | -- |

| PASSING EXPLOSIVENESS              |           |                              |           |
|------------------------------------|-----------|------------------------------|-----------|
| <b>+0.13</b><br>head-to-head +0.30 | 1.33 (22) | Duke OFF vs Georgia Tech DEF | 1.27 (85) |
|                                    | 1.07 (16) | Duke DEF vs Georgia Tech OFF | 1.22 (75) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                              |      |
|----------------------|------------------------------|------|

|                                      | 3.0 (17)  | Duke DEF vs Georgia Tech OFF | 3.8 (89)    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                              |          |
|------------|------------------------------|----------|
| 0.00 (1)   | Duke OFF vs Georgia Tech DEF | 5.8 (11) |
| 3.8 (71)   | Duke DEF vs Georgia Tech OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                              |           |
|------------|-----------|------------------------------|-----------|
| +0.53      | 3.3 (36)  | Duke OFF vs Georgia Tech DEF | 2.91 (79) |
|            | 2.62 (36) | Duke DEF vs Georgia Tech OFF | 3.1 (72)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                              |           |
|-----------------------------|-----------|------------------------------|-----------|
| -0.37<br>head-to-head +2.83 | 0.75 (60) | Duke OFF vs Georgia Tech DEF | 0.68 (52) |
|                             | 0.70 (62) | Duke DEF vs Georgia Tech OFF | 0.71 (92) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                              |            |
|------------|-----------|------------------------------|------------|
| +4.20      | 0.16 (56) | Duke OFF vs Georgia Tech DEF | 0.17 (92)  |
|            | 0.17 (90) | Duke DEF vs Georgia Tech OFF | 0.20 (108) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                              |            |
|-----------------------------|-----------|------------------------------|------------|
| +5.73<br>head-to-head +9.60 | 0.09 (6)  | Duke OFF vs Georgia Tech DEF | 0.16 (68)  |
|                             | 0.18 (32) | Duke DEF vs Georgia Tech OFF | 0.16 (102) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |          |                              |           |
|-----------------------------|----------|------------------------------|-----------|
| +0.28<br>head-to-head +0.76 | 1.42 (6) | Duke OFF vs Georgia Tech DEF | 0.96 (66) |
|                             | 0.52 (1) | Duke DEF vs Georgia Tech OFF | 1.11 (69) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                              |           |
|-----------------------------|-----------|------------------------------|-----------|
| -0.01<br>head-to-head +0.62 | 1.52 (46) | Duke OFF vs Georgia Tech DEF | 0.82 (46) |
|                             | 0.57 (25) | Duke DEF vs Georgia Tech OFF | 1.15 (77) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |            |
|-----------|------|------------|
| 0.64 (43) | F+   | -0.06 (70) |
| 0.68 (37) | OF+  | 0.07 (65)  |
| 0.48 (41) | DF+  | -0.33 (86) |
| 0.34 (41) | FEI  | -0.05 (68) |
| 0.16 (39) | OFEI | 0.01 (56)  |
| 0.17 (48) | DFEI | -0.15 (91) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.47**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.39**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |            |
|-----------|-------------------------|------------|
| 0.17 (31) | NET SUCCESS RATE        | -0.09 (90) |
| 0.47 (54) | OFF SUCCESS RATE (OSR)  | 0.41 (74)  |
| 0.30 (23) | OPP SUCCESS RATE (DSR)  | 0.50 (100) |
| 0.45 (64) | OFF SUCCESS RATE (CFBD) | 0.44 (66)  |
| 0.35 (30) | DEF SUCCESS RATE (CFBD) | 0.41 (83)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.25**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.12**

head-to-head +0.25

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.29 (21)  | OFF PPA         | 0.14 (72)  |
| -0.06 (23) | DEF PPA ALLOWED | 0.16 (105) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.24**

head-to-head +0.37

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                     |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 80.0 | Virginia Tech OFF vs California DEF | 70.5 | -1.80 |
|                                                                                                                                                 | 63.0 | Virginia Tech DEF vs California OFF | 74.3 |       |

POINTS / GAME

|       |           |                                     |            |                                                                                                                                                                    |
|-------|-----------|-------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +19.3 | 33.3 (31) | Virginia Tech OFF vs California DEF | 31.5 (103) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 24.0 (53) | Virginia Tech DEF vs California OFF | 21.5 (90)  |                                                                                                                                                                    |

YARDS / GAME

|        |            |                                     |            |                                                                                                                                                      |
|--------|------------|-------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +173.2 | 432.5 (32) | Virginia Tech OFF vs California DEF | 401.5 (88) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|        | 322.3 (36) | Virginia Tech DEF vs California OFF | 338.5 (92) |                                                                                                                                                      |

YARDS / PLAY

|       |          |                                     |           |                                                                                                                                                     |
|-------|----------|-------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.40 | 5.4 (66) | Virginia Tech OFF vs California DEF | 5.7 (76)  | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 5.1 (48) | Virginia Tech DEF vs California OFF | 4.6 (117) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +6.89                                          | +12.6 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                                     |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 88.2 (58)  | Virginia Tech OFF vs California DEF | 80.0 (41) | -23.4 |
|                                                                                                                                  | 91.7 (105) | Virginia Tech DEF vs California OFF | 100.0 (1) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                     |            |                                                                                                                   |
|-------|-----------|-------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +20.5 | 44.1 (39) | Virginia Tech OFF vs California DEF | 44.1 (106) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 33.3 (28) | Virginia Tech DEF vs California OFF | 34.4 (97)  |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                             |            |                                     |            |
|-----------------------------|------------|-------------------------------------|------------|
| +54.0<br>head-to-head +35.5 | 305.5 (13) | Virginia Tech OFF vs California DEF | 195.3 (37) |
|                             | 212.0 (55) | Virginia Tech DEF vs California OFF | 253.3 (42) |

| PASS YARDS / ATTEMPT               |          |                                     |           |
|------------------------------------|----------|-------------------------------------|-----------|
| <b>-0.54</b><br>head-to-head +1.10 | 7.7 (52) | Virginia Tech OFF vs California DEF | 6.6 (39)  |
|                                    | 7.2 (61) | Virginia Tech DEF vs California OFF | 6.0 (116) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                             |            |
|-----------|-----------------------------|------------|
| 83.8 (25) | Virginia Tech vs California | 56.2 (104) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                     |           |
|----------------------|-------------------------------------|-----------|
| 63.7 (40)            | Virginia Tech OFF vs California DEF | 51.3 (55) |
| 62.4 (78)            | Virginia Tech DEF vs California OFF | 41.2 (84) |

| SACKS ALLOWED / GAME |           |                                     |                                    |
|----------------------|-----------|-------------------------------------|------------------------------------|
|                      | 2.30 (87) | Virginia Tech OFF vs California DEF | 2.50 (36)                          |
|                      | 3.3 (14)  | Virginia Tech DEF vs California OFF | 2.50 (98)                          |
|                      |           |                                     | <b>-7.95</b><br>head-to-head +3.87 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                             |      |
|--------------|-----------------------------|------|
| 72.3         | Virginia Tech vs California | 60.0 |

| QB RUSH YARDS / GAME |                             |    |
|----------------------|-----------------------------|----|
| --                   | Virginia Tech vs California | -- |

| PASSING EXPLOSIVENESS              |            |                                     |            |
|------------------------------------|------------|-------------------------------------|------------|
| <b>+0.25</b><br>head-to-head +0.06 | 1.27 (51)  | Virginia Tech OFF vs California DEF | 1.44 (130) |
|                                    | 1.37 (118) | Virginia Tech DEF vs California OFF | 1.29 (45)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                     |      |
|----------------------|-------------------------------------|------|
| 0.50                 | Virginia Tech OFF vs California DEF | --   |
| --                   | Virginia Tech DEF vs California OFF | 1.30 |

| RUSHING GAME                        |            |                                     |             |
|-------------------------------------|------------|-------------------------------------|-------------|
| RUSH YARDS / GAME                   |            |                                     |             |
| <b>+30.2</b><br>head-to-head +137.7 | 127.0 (86) | Virginia Tech OFF vs California DEF | 206.3 (122) |
|                                     | 110.3 (27) | Virginia Tech DEF vs California OFF | 85.3 (130)  |
| RUSH YARDS / ATTEMPT                |            |                                     |             |
| <b>+0.34</b><br>head-to-head +2.20  | 3.3 (107)  | Virginia Tech OFF vs California DEF | 5.4 (122)   |
|                                     | 3.6 (36)   | Virginia Tech DEF vs California OFF | 2.90 (121)  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                     |          |
|------------|-------------------------------------|----------|
| 0.00 (1)   | Virginia Tech OFF vs California DEF | 3.8 (71) |
| 7.8 (2)    | Virginia Tech DEF vs California OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |            |                                     |            |
|------------|------------|-------------------------------------|------------|
| +1.80      | 2.77 (113) | Virginia Tech OFF vs California DEF | 3.1 (100)  |
|            | 1.25 (1)   | Virginia Tech DEF vs California OFF | 2.80 (110) |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +20.7<br>head-to-head +46.4 | 0.75 (60) | Virginia Tech OFF vs California DEF | 0.89 (133) |
|                             | 0.62 (27) | Virginia Tech DEF vs California OFF | 0.56 (131) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |            |                                     |            |
|------------|------------|-------------------------------------|------------|
| +21.6      | 0.21 (117) | Virginia Tech OFF vs California DEF | 0.16 (108) |
|            | 0.37 (1)   | Virginia Tech DEF vs California OFF | 0.21 (121) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +5.23<br>head-to-head +16.7 | 0.12 (30) | Virginia Tech OFF vs California DEF | 0.14 (103) |
|                             | 0.25 (2)  | Virginia Tech DEF vs California OFF | 0.17 (112) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| -0.05<br>head-to-head +0.22 | 1.02 (96) | Virginia Tech OFF vs California DEF | 1.04 (90)  |
|                             | 0.88 (37) | Virginia Tech DEF vs California OFF | 0.96 (110) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +0.89<br>head-to-head +1.51 | 1.03 (87) | Virginia Tech OFF vs California DEF | 2.21 (133) |
|                             | 1.24 (89) | Virginia Tech DEF vs California OFF | 0.50 (132) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |            |
|-----------|------|------------|
| 0.61 (45) | F+   | -0.35 (83) |
| 0.76 (32) | OF+  | -0.51 (92) |
| 0.30 (51) | DF+  | -0.17 (79) |
| 0.21 (52) | FEI  | -0.26 (83) |
| 0.17 (38) | OFEI | -0.25 (91) |
| 0.00 (68) | DFEI | -0.05 (80) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.47**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.47**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |             |
|-----------|-------------------------|-------------|
| 0.23 (18) | NET SUCCESS RATE        | -0.18 (109) |
| 0.52 (31) | OFF SUCCESS RATE (OSR)  | 0.30 (112)  |
| 0.29 (19) | OPP SUCCESS RATE (DSR)  | 0.48 (90)   |
| 0.47 (42) | OFF SUCCESS RATE (CFBD) | 0.39 (118)  |
| 0.32 (9)  | DEF SUCCESS RATE (CFBD) | 0.35 (25)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.41**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.15**

head-to-head +0.41

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |             |
|------------|-----------------|-------------|
| 0.22 (46)  | OFF PPA         | -0.01 (123) |
| -0.01 (45) | DEF PPA ALLOWED | 0.04 (60)   |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.04**

head-to-head +0.27

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

POINTS / GAME

|       |           |                                    |            |                                                                                                                                                                    |
|-------|-----------|------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.30 | 26.3 (70) | Illinois OFF vs Michigan State DEF | 23.2 (49)  | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 30.0 (91) | Illinois DEF vs Michigan State OFF | 18.2 (108) |                                                                                                                                                                    |

YARDS / GAME

|                                                                                                                                                      |            |                                    |             |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------------|-------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 380.3 (59) | Illinois OFF vs Michigan State DEF | 325.8 (38)  | -12.5 |
|                                                                                                                                                      | 413.0 (97) | Illinois DEF vs Michigan State OFF | 305.6 (113) |       |

YARDS / PLAY

|       |           |                                    |           |                                                                                                                                                     |
|-------|-----------|------------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.10 | 6.1 (35)  | Illinois OFF vs Michigan State DEF | 5.5 (66)  | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 6.2 (108) | Illinois DEF vs Michigan State OFF | 4.3 (126) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +14.1                                          | +7.12 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |             |                                    |            |       |
|----------------------------------------------------------------------------------------------------------------------------------|-------------|------------------------------------|------------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 66.7 (123)  | Illinois OFF vs Michigan State DEF | 93.3 (118) | -26.7 |
|                                                                                                                                  | 100.0 (128) | Illinois DEF vs Michigan State OFF | 86.7 (65)  |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                    |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 46.7 (30)  | Illinois OFF vs Michigan State DEF | 40.3 (77) | -2.03 |
|                                                                                                                   | 49.0 (122) | Illinois DEF vs Michigan State OFF | 40.0 (68) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |             |                                    |             |                             |
|--|-------------|------------------------------------|-------------|-----------------------------|
|  | 235.3 (59)  | Illinois OFF vs Michigan State DEF | 181.0 (28)  | -3.01<br>head-to-head +27.5 |
|  | 261.8 (109) | Illinois DEF vs Michigan State OFF | 182.0 (104) |                             |

| PASS YARDS / ATTEMPT |           |                                    |          |                             |
|----------------------|-----------|------------------------------------|----------|-----------------------------|
|                      | 7.4 (64)  | Illinois OFF vs Michigan State DEF | 7.7 (78) | +0.66<br>head-to-head +0.40 |
|                      | 9.0 (126) | Illinois DEF vs Michigan State OFF | 6.5 (98) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                            |           |
|-----------|----------------------------|-----------|
| 87.4 (13) | Illinois vs Michigan State | 64.0 (75) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                    |           |
|----------------------|------------------------------------|-----------|
| 77.4 (17)            | Illinois OFF vs Michigan State DEF | 57.4 (68) |
| 38.5 (26)            | Illinois DEF vs Michigan State OFF | 41.4 (83) |

| SACKS ALLOWED / GAME |            |                                    |           |                             |
|----------------------|------------|------------------------------------|-----------|-----------------------------|
|                      | 1.00 (15)  | Illinois OFF vs Michigan State DEF | 1.40 (98) | -9.35<br>head-to-head +7.88 |
|                      | 0.50 (131) | Illinois DEF vs Michigan State OFF | 3.4 (126) |                             |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                            |      |
|--------------|----------------------------|------|
| 61.7         | Illinois vs Michigan State | 62.9 |

| QB RUSH YARDS / GAME |                            |    |
|----------------------|----------------------------|----|
| --                   | Illinois vs Michigan State | -- |

| PASSING EXPLOSIVENESS       |           |                                    |            |  |
|-----------------------------|-----------|------------------------------------|------------|--|
| +0.17<br>head-to-head +0.36 | 1.30 (38) | Illinois OFF vs Michigan State DEF | 1.34 (110) |  |
|                             | 1.27 (86) | Illinois DEF vs Michigan State OFF | 1.01 (136) |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                    |      |
|----------------------|------------------------------------|------|
| 0.50                 | Illinois OFF vs Michigan State DEF | --   |
| --                   | Illinois DEF vs Michigan State OFF | 0.80 |

| RUSHING GAME                |            |                                    |            |  |
|-----------------------------|------------|------------------------------------|------------|--|
| RUSH YARDS / GAME           |            |                                    |            |  |
| -13.3<br>head-to-head +14.9 | 145.0 (70) | Illinois OFF vs Michigan State DEF | 144.8 (60) |  |
|                             | 151.3 (68) | Illinois DEF vs Michigan State OFF | 123.6 (91) |  |
| RUSH YARDS / ATTEMPT        |            |                                    |            |  |
| +0.74<br>head-to-head +1.90 | 4.9 (28)   | Illinois OFF vs Michigan State DEF | 4.2 (66)   |  |
|                             | 4.1 (56)   | Illinois DEF vs Michigan State OFF | 3.1 (118)  |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                    |           |
|------------|------------------------------------|-----------|
| 0.00 (1)   | Illinois OFF vs Michigan State DEF | 2.80 (96) |
| 2.20 (111) | Illinois DEF vs Michigan State OFF | 0.00 (1)  |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                    |            |                                                                                                                                              |
|------------|-----------|------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.84      | 3.5 (22)  | Illinois OFF vs Michigan State DEF | 2.90 (76)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|            | 2.61 (32) | Illinois DEF vs Michigan State OFF | 2.90 (101) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                                    |           |                             |
|--------------------|-----------|------------------------------------|-----------|-----------------------------|
|                    | 0.71 (92) | Illinois OFF vs Michigan State DEF | 0.68 (50) | +1.58<br>head-to-head +6.60 |
|                    | 0.75 (85) | Illinois DEF vs Michigan State OFF | 0.70 (94) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                    |           |                                                                                                                                            |
|------------|-----------|------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +6.62      | 0.11 (9)  | Illinois OFF vs Michigan State DEF | 0.22 (35) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|            | 0.21 (44) | Illinois DEF vs Michigan State OFF | 0.18 (86) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |            |                                    |            |  |
|-----------------------------|------------|------------------------------------|------------|--|
| +5.23<br>head-to-head +5.40 | 0.12 (24)  | Illinois OFF vs Michigan State DEF | 0.14 (98)  |  |
|                             | 0.13 (114) | Illinois DEF vs Michigan State OFF | 0.18 (122) |  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                    |            |  |
|-----------------------------|-----------|------------------------------------|------------|--|
| +0.09<br>head-to-head +0.44 | 1.19 (54) | Illinois OFF vs Michigan State DEF | 1.00 (77)  |  |
|                             | 0.94 (57) | Illinois DEF vs Michigan State OFF | 0.81 (131) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                    |            |  |
|-----------------------------|-----------|------------------------------------|------------|--|
| +0.30<br>head-to-head +1.71 | 1.54 (44) | Illinois OFF vs Michigan State DEF | 1.12 (79)  |  |
|                             | 0.46 (19) | Illinois DEF vs Michigan State OFF | 0.48 (133) |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |            |
|------------|------|------------|
| 0.50 (47)  | F+   | -0.05 (69) |
| 1.02 (22)  | OF+  | -0.25 (84) |
| -0.21 (84) | DF+  | -0.02 (68) |
| 0.30 (43)  | FEI  | -0.01 (62) |
| 0.37 (14)  | OFEI | -0.07 (68) |
| -0.10 (86) | DFEI | -0.07 (83) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.41**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.31**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |            |
|------------|-------------------------|------------|
| -0.05 (87) | NET SUCCESS RATE        | -0.03 (78) |
| 0.58 (15)  | OFF SUCCESS RATE (OSR)  | 0.44 (65)  |
| 0.62 (130) | OPP SUCCESS RATE (DSR)  | 0.48 (89)  |
| 0.50 (19)  | OFF SUCCESS RATE (CFBD) | 0.43 (83)  |
| 0.45 (112) | DEF SUCCESS RATE (CFBD) | 0.40 (74)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.01**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.22**

head-to-head +0.02

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |             |
|------------|-----------------|-------------|
| 0.24 (35)  | OFF PPA         | -0.05 (129) |
| 0.21 (123) | DEF PPA ALLOWED | 0.18 (115)  |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.20**

head-to-head +0.26

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN                                                                                                                                                          |             |                                  |            |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------------------------|------------|--------|
| PLAYS / GAME                                                                                                                                                       |             |                                  |            |        |

| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 4.3 (126)   | Charlotte OFF vs North Texas DEF | 5.9 (91)   | -2.20  |
|                                                                                                                                                                    | 5.9 (91)    | Charlotte DEF vs North Texas OFF | 6.5 (18)   |        |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| +33.0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | +8.89 |
| <b>THE FRAUD INDEX &amp; FRAUD GAP (POINTS VS. YARDS):</b> Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE %                                                                                                                       |            |                                  |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 83.3 (76)  | Charlotte OFF vs North Texas DEF | 83.3 (57) | -19.4 |
|                                                                                                                                  | 94.7 (124) | Charlotte DEF vs North Texas OFF | 91.3 (41) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                  |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 13.0 (138) | Charlotte OFF vs North Texas DEF | 39.6 (73) | -41.3 |
|                                                                                                                   | 44.0 (105) | Charlotte DEF vs North Texas OFF | 50.0 (12) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |             |                                  |            |                     |
|-------------------|-------------|----------------------------------|------------|---------------------|
| PASS YARDS / GAME |             |                                  |            |                     |
|                   | 144.5 (127) | Charlotte OFF vs North Texas DEF | 228.3 (73) | +174.0              |
|                   | 295.8 (127) | Charlotte DEF vs North Texas OFF | 325.0 (3)  | head-to-head +248.0 |

| PASS YARDS / ATTEMPT |           |                                  |          |                             |
|----------------------|-----------|----------------------------------|----------|-----------------------------|
|                      | 5.3 (132) | Charlotte OFF vs North Texas DEF | 8.0 (90) | +2.26<br>head-to-head +3.80 |
|                      | 8.6 (113) | Charlotte DEF vs North Texas OFF | 8.5 (30) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                          |           |
|------------|--------------------------|-----------|
| 32.4 (136) | Charlotte vs North Texas | 87.3 (14) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                  |           |
|----------------------|----------------------------------|-----------|
| 10.5 (136)           | Charlotte OFF vs North Texas DEF | 47.7 (47) |
| 28.8 (11)            | Charlotte DEF vs North Texas OFF | 76.5 (19) |

| SACKS ALLOWED / GAME        |           |                                  |           |  |
|-----------------------------|-----------|----------------------------------|-----------|--|
| -9.09<br>head-to-head +7.50 | 1.30 (30) | Charlotte OFF vs North Texas DEF | 1.50 (88) |  |
|                             | 1.50 (88) | Charlotte DEF vs North Texas OFF | 0.80 (13) |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                          |      |
|--------------|--------------------------|------|
| 60.5         | Charlotte vs North Texas | 69.3 |

| QB RUSH YARDS / GAME |                          |    |
|----------------------|--------------------------|----|
| --                   | Charlotte vs North Texas | -- |

| PASSING EXPLOSIVENESS |            |                                  |           |                             |
|-----------------------|------------|----------------------------------|-----------|-----------------------------|
|                       | 1.11 (122) | Charlotte OFF vs North Texas DEF | 1.22 (68) | +0.04<br>head-to-head +0.17 |
|                       | 1.18 (50)  | Charlotte DEF vs North Texas OFF | 1.33 (23) |                             |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                  |      |
|----------------------|----------------------------------|------|
| 1.30                 | Charlotte OFF vs North Texas DEF | --   |
| --                   | Charlotte DEF vs North Texas OFF | 1.00 |

## RUSHING GAME

| RUSH YARDS / GAME |            |                                  |             |                             |
|-------------------|------------|----------------------------------|-------------|-----------------------------|
|                   | 84.3 (131) | Charlotte OFF vs North Texas DEF | 177.5 (101) | +25.2<br>head-to-head +66.5 |
|                   | 159.5 (76) | Charlotte DEF vs North Texas OFF | 168.8 (48)  |                             |

| RUSH YARDS / ATTEMPT |          |                                  |          |                             |
|----------------------|----------|----------------------------------|----------|-----------------------------|
|                      | 3.5 (99) | Charlotte OFF vs North Texas DEF | 4.6 (87) | +0.04<br>head-to-head +0.30 |
|                      | 3.9 (48) | Charlotte DEF vs North Texas OFF | 4.5 (47) |                             |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                  |          |
|------------|----------------------------------|----------|
| 0.00 (1)   | Charlotte OFF vs North Texas DEF | 3.6 (77) |
| 4.2 (53)   | Charlotte DEF vs North Texas OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |            |                                  |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.28 (137) | Charlotte OFF vs North Texas DEF | 2.66 (43) | -1.11 |
|                                                                                                                                              | 3.0 (97)   | Charlotte DEF vs North Texas OFF | 3.0 (85)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                  |            |                             |
|--------------------|------------|----------------------------------|------------|-----------------------------|
|                    | 0.57 (129) | Charlotte OFF vs North Texas DEF | 0.69 (56)  | +3.27<br>head-to-head +21.2 |
|                    | 0.82 (118) | Charlotte DEF vs North Texas OFF | 0.65 (109) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                  |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.27 (137) | Charlotte OFF vs North Texas DEF | 0.18 (84) | -5.40 |
|                                                                                                                                            | 0.21 (45)  | Charlotte DEF vs North Texas OFF | 0.18 (86) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                  |           |                             |
|------------|------------|----------------------------------|-----------|-----------------------------|
|            | 0.19 (128) | Charlotte OFF vs North Texas DEF | 0.15 (78) | +7.23<br>head-to-head +11.0 |
|            | 0.12 (125) | Charlotte DEF vs North Texas OFF | 0.11 (22) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                  |           |                             |
|-----------------|------------|----------------------------------|-----------|-----------------------------|
|                 | 0.98 (109) | Charlotte OFF vs North Texas DEF | 0.92 (47) | +0.13<br>head-to-head +0.34 |
|                 | 1.12 (102) | Charlotte DEF vs North Texas OFF | 1.11 (70) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                  |           |  |
|-----------------------------|-----------|----------------------------------|-----------|--|
| +0.60<br>head-to-head +0.54 | 1.66 (32) | Charlotte OFF vs North Texas DEF | 1.28 (95) |  |
|                             | 1.14 (80) | Charlotte DEF vs North Texas OFF | 1.27 (67) |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.95 (135) | F+   | -0.20 (75)  |
| -1.94 (137) | OF+  | 0.80 (29)   |
| -1.54 (131) | DF+  | -1.02 (119) |
| -1.11 (133) | FEI  | -0.09 (70)  |
| -0.72 (137) | OFEI | 0.29 (23)   |
| -0.29 (114) | DFEI | -0.25 (100) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-1.05

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-1.02

|             |                         |            |
|-------------|-------------------------|------------|
| -0.42 (135) | NET SUCCESS RATE        | 0.00 (65)  |
| 0.18 (135)  | OFF SUCCESS RATE (OSR)  | 0.54 (29)  |
| 0.60 (126)  | OPP SUCCESS RATE (DSR)  | 0.54 (110) |
| 0.35 (130)  | OFF SUCCESS RATE (CFBD) | 0.48 (35)  |
| 0.50 (134)  | DEF SUCCESS RATE (CFBD) | 0.44 (104) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.42

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.29

head-to-head +0.42

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|             |                 |           |
|-------------|-----------------|-----------|
| -0.09 (133) | OFF PPA         | 0.28 (28) |
| 0.21 (122)  | DEF PPA ALLOWED | 0.13 (96) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.27

head-to-head +0.44

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 30% / Rush 70%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|       |      |                       |      |                                                                                                                                                 |
|-------|------|-----------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +17.5 | 68.0 | Tulsa OFF vs Navy DEF | 69.7 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|       | 81.5 | Tulsa DEF vs Navy OFF | 62.3 |                                                                                                                                                 |

POINTS / GAME

|       |           |                       |            |                                                                                                                                                                    |
|-------|-----------|-----------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +3.40 | 24.3 (76) | Tulsa OFF vs Navy DEF | 25.3 (59)  | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 26.5 (73) | Tulsa DEF vs Navy OFF | 19.7 (101) |                                                                                                                                                                    |

YARDS / GAME

|                                                                                                                                                      |             |                       |             |        |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------------|-------------|--------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 330.3 (101) | Tulsa OFF vs Navy DEF | 329.3 (40)  | -108.2 |
|                                                                                                                                                      | 434.8 (111) | Tulsa DEF vs Navy OFF | 333.0 (100) |        |

YARDS / PLAY

|                                                                                                                                                     |           |                       |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 4.9 (102) | Tulsa OFF vs Navy DEF | 4.7 (23) | -1.00 |
|                                                                                                                                                     | 5.3 (57)  | Tulsa DEF vs Navy OFF | 5.3 (73) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

|    |       |
|----|-------|
| -- | -2.81 |
|----|-------|

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                       |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 75.0 (109) | Tulsa OFF vs Navy DEF | 83.3 (57) | -25.9 |
|                                                                                                                                  | 84.2 (60)  | Tulsa DEF vs Navy OFF | 100.0 (1) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |            |                       |            |                                                                                                                   |
|-------|------------|-----------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +4.02 | 22.0 (133) | Tulsa OFF vs Navy DEF | 51.1 (128) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 39.4 (68)  | Tulsa DEF vs Navy OFF | 29.7 (117) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|             |                       |                       |                             |
|-------------|-----------------------|-----------------------|-----------------------------|
| 185.0 (102) | Tulsa OFF vs Navy DEF | 214.0 (59)            | -16.0<br>head-to-head +31.8 |
|             | 299.5 (132)           | Tulsa DEF vs Navy OFF | 131.3 (133)                 |

PASS YARDS / ATTEMPT

|                                    |           |                       |           |
|------------------------------------|-----------|-----------------------|-----------|
| <b>+0.66</b><br>head-to-head +0.70 | 5.6 (126) | Tulsa OFF vs Navy DEF | 9.9 (132) |
|                                    | 7.5 (71)  | Tulsa DEF vs Navy OFF | 7.3 (68)  |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |               |           |
|-----------|---------------|-----------|
| 67.9 (64) | Tulsa vs Navy | 70.0 (61) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                       |           |
|----------------------|-----------------------|-----------|
| 43.7 (79)            | Tulsa OFF vs Navy DEF | 38.9 (27) |
| 62.3 (77)            | Tulsa DEF vs Navy OFF | 34.4 (99) |

| SACKS ALLOWED / GAME |                       |           |                                    |  |
|----------------------|-----------------------|-----------|------------------------------------|--|
| 1.80 (60)            | Tulsa OFF vs Navy DEF | 2.30 (48) | <b>-11.3</b><br>head-to-head +0.03 |  |
| 2.80 (23)            | Tulsa DEF vs Navy OFF | 3.0 (113) |                                    |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |               |      |
|--------------|---------------|------|
| 59.1         | Tulsa vs Navy | 38.9 |

| QB RUSH YARDS / GAME |               |    |
|----------------------|---------------|----|
| --                   | Tulsa vs Navy | -- |

| PASSING EXPLOSIVENESS              |            |                       |            |  |
|------------------------------------|------------|-----------------------|------------|--|
| <b>+0.02</b><br>head-to-head +0.18 | 1.16 (105) | Tulsa OFF vs Navy DEF | 1.33 (107) |  |
|                                    | 1.15 (36)  | Tulsa DEF vs Navy OFF | 1.15 (109) |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                       |      |
|----------------------|-----------------------|------|
| 0.30                 | Tulsa OFF vs Navy DEF | --   |
| --                   | Tulsa DEF vs Navy OFF | 0.30 |

## RUSHING GAME

| RUSH YARDS / GAME |                       |            |                                    |  |
|-------------------|-----------------------|------------|------------------------------------|--|
| 145.3 (69)        | Tulsa OFF vs Navy DEF | 115.3 (32) | <b>+33.9</b><br>head-to-head +76.4 |  |
| 135.3 (54)        | Tulsa DEF vs Navy OFF | 201.7 (25) |                                    |  |

| RUSH YARDS / ATTEMPT |                       |          |                                    |  |
|----------------------|-----------------------|----------|------------------------------------|--|
| 4.4 (54)             | Tulsa OFF vs Navy DEF | 2.50 (8) | <b>+0.04</b><br>head-to-head +1.50 |  |
| 3.5 (32)             | Tulsa DEF vs Navy OFF | 4.9 (28) |                                    |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                       |          |
|------------|-----------------------|----------|
| 0.00 (1)   | Tulsa OFF vs Navy DEF | 5.5 (18) |
| 4.4 (46)   | Tulsa DEF vs Navy OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                       |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.3 (40)  | Tulsa OFF vs Navy DEF | 2.64 (39) | -0.44 |
|                                                                                                                                              | 2.67 (45) | Tulsa DEF vs Navy OFF | 3.7 (5)   |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                       |            |  |
|-----------------------------|-----------|-----------------------|------------|--|
| +28.7<br>head-to-head +18.8 | 0.84 (13) | Tulsa OFF vs Navy DEF | 0.88 (131) |  |
|                             | 0.58 (16) | Tulsa DEF vs Navy OFF | 0.96 (1)   |  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                       |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.12 (13) | Tulsa OFF vs Navy DEF | 0.21 (54) | -0.90 |
|                                                                                                                                            | 0.21 (53) | Tulsa DEF vs Navy OFF | 0.11 (8)  |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                       |            |  |
|-----------------------------|-----------|-----------------------|------------|--|
| +2.83<br>head-to-head +1.80 | 0.15 (75) | Tulsa OFF vs Navy DEF | 0.13 (109) |  |
|                             | 0.14 (96) | Tulsa DEF vs Navy OFF | 0.16 (92)  |  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |           |                       |           |                             |
|-----------------|-----------|-----------------------|-----------|-----------------------------|
|                 | 1.08 (74) | Tulsa OFF vs Navy DEF | 0.66 (9)  | +0.13<br>head-to-head +0.49 |
|                 | 0.95 (61) | Tulsa DEF vs Navy OFF | 1.28 (29) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |           |                       |           |                             |
|------------------|-----------|-----------------------|-----------|-----------------------------|
|                  | 1.50 (48) | Tulsa OFF vs Navy DEF | 0.32 (8)  | +0.02<br>head-to-head +0.55 |
|                  | 0.81 (44) | Tulsa DEF vs Navy OFF | 1.56 (43) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -0.45 (89)  | F+   | -0.30 (82) |
| -0.59 (97)  | OF+  | -0.33 (86) |
| -0.10 (75)  | DF+  | -0.19 (81) |
| -0.41 (95)  | FEI  | -0.32 (88) |
| -0.30 (100) | OFEI | -0.23 (89) |
| 0.00 (68)   | DFEI | -0.06 (82) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.01**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.09**

|            |                         |            |
|------------|-------------------------|------------|
| 0.00 (66)  | NET SUCCESS RATE        | -0.10 (95) |
| 0.38 (86)  | OFF SUCCESS RATE (OSR)  | 0.35 (93)  |
| 0.38 (50)  | OPP SUCCESS RATE (DSR)  | 0.45 (78)  |
| 0.41 (104) | OFF SUCCESS RATE (CFBD) | 0.47 (41)  |
| 0.39 (61)  | DEF SUCCESS RATE (CFBD) | 0.38 (50)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.10**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**-0.02**

head-to-head +0.10

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.13 (74)  | OFF PPA         | 0.17 (64) |
| -0.02 (39) | DEF PPA ALLOWED | 0.07 (73) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**-0.02**

head-to-head +0.05

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|       | 398.2 (86)  | Eastern Michigan DEF vs Akron OFF | 291.8 (120) |                                                                                                                                                      |

YARDS / PLAY

|       |           |                                   |           |                                                                                                                                                     |
|-------|-----------|-----------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.60 | 4.5 (121) | Eastern Michigan OFF vs Akron DEF | 7.5 (134) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 6.0 (102) | Eastern Michigan DEF vs Akron OFF | 4.4 (124) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +3.52                                          | +5.60 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                   |           |                                                                                                                                  |
|-------|-----------|-----------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +1.97 | 84.6 (71) | Eastern Michigan OFF vs Akron DEF | 86.7 (72) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 87.5 (75) | Eastern Michigan DEF vs Akron OFF | 81.8 (86) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                   |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 40.0 (68)  | Eastern Michigan OFF vs Akron DEF | 41.2 (83) | -2.94 |
|                                                                                                                   | 47.8 (119) | Eastern Michigan DEF vs Akron OFF | 36.4 (89) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|             |                                   |             |                             |
|-------------|-----------------------------------|-------------|-----------------------------|
| 188.8 (97)  | Eastern Michigan OFF vs Akron DEF | 249.8 (95)  | -6.21<br>head-to-head +2.00 |
| 264.8 (114) | Eastern Michigan DEF vs Akron OFF | 175.8 (110) |                             |

| PASS YARDS / ATTEMPT               |           |                                   |           |
|------------------------------------|-----------|-----------------------------------|-----------|
| <b>-0.24</b><br>head-to-head +1.50 | 5.7 (123) | Eastern Michigan OFF vs Akron DEF | 8.9 (123) |
|                                    | 7.7 (78)  | Eastern Michigan DEF vs Akron OFF | 5.4 (130) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                           |           |
|-----------|---------------------------|-----------|
| 62.6 (84) | Eastern Michigan vs Akron | 73.9 (54) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                   |            |
|----------------------|-----------------------------------|------------|
| 30.2 (112)           | Eastern Michigan OFF vs Akron DEF | 22.0 (4)   |
| 43.8 (36)            | Eastern Michigan DEF vs Akron OFF | 26.5 (118) |

| SACKS ALLOWED / GAME |            |                                   |            |                                    |
|----------------------|------------|-----------------------------------|------------|------------------------------------|
|                      | 1.60 (55)  | Eastern Michigan OFF vs Akron DEF | 0.30 (136) | <b>-15.1</b><br>head-to-head +2.72 |
|                      | 1.00 (109) | Eastern Michigan DEF vs Akron OFF | 2.50 (98)  |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                           |      |
|--------------|---------------------------|------|
| 63.5         | Eastern Michigan vs Akron | 60.5 |

| QB RUSH YARDS / GAME |                           |    |
|----------------------|---------------------------|----|
| --                   | Eastern Michigan vs Akron | -- |

| PASSING EXPLOSIVENESS              |            |                                   |            |
|------------------------------------|------------|-----------------------------------|------------|
| <b>+0.07</b><br>head-to-head +0.27 | 1.15 (111) | Eastern Michigan OFF vs Akron DEF | 1.39 (123) |
|                                    | 1.22 (69)  | Eastern Michigan DEF vs Akron OFF | 1.04 (135) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                   |      |
|----------------------|-----------------------------------|------|
| 0.60                 | Eastern Michigan OFF vs Akron DEF | --   |
| --                   | Eastern Michigan DEF vs Akron OFF | 1.30 |

| RUSHING GAME                       |             |                                   |             |
|------------------------------------|-------------|-----------------------------------|-------------|
| RUSH YARDS / GAME                  |             |                                   |             |
| <b>+35.4</b><br>head-to-head +89.1 | 106.2 (109) | Eastern Michigan OFF vs Akron DEF | 232.3 (132) |
|                                    | 133.4 (50)  | Eastern Michigan DEF vs Akron OFF | 116.0 (98)  |
| RUSH YARDS / ATTEMPT               |             |                                   |             |
| <b>+1.54</b><br>head-to-head +1.80 | 3.5 (99)    | Eastern Michigan OFF vs Akron DEF | 6.4 (135)   |
|                                    | 4.4 (79)    | Eastern Michigan DEF vs Akron OFF | 3.7 (93)    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                   |            |
|------------|-----------------------------------|------------|
| 0.00 (1)   | Eastern Michigan OFF vs Akron DEF | 1.80 (113) |
| 3.5 (82)   | Eastern Michigan DEF vs Akron OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                                   |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.0 (86)  | Eastern Michigan OFF vs Akron DEF | 3.2 (114) | -0.45 |
|                                                                                                                                              | 2.97 (89) | Eastern Michigan DEF vs Akron OFF | 3.7 (8)   |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                                   |           |                             |
|--------------------|-----------|-----------------------------------|-----------|-----------------------------|
|                    | 0.74 (73) | Eastern Michigan OFF vs Akron DEF | 0.75 (85) | +11.5<br>head-to-head +6.04 |
|                    | 0.74 (84) | Eastern Michigan DEF vs Akron OFF | 0.81 (27) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                                   |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.18 (76) | Eastern Michigan OFF vs Akron DEF | 0.17 (97) | -1.43 |
|                                                                                                                                            | 0.19 (70) | Eastern Michigan DEF vs Akron OFF | 0.14 (26) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                   |            |  |
|-----------------------------|-----------|-----------------------------------|------------|--|
| +1.73<br>head-to-head +8.10 | 0.16 (92) | Eastern Michigan OFF vs Akron DEF | 0.13 (105) |  |
|                             | 0.18 (45) | Eastern Michigan DEF vs Akron OFF | 0.19 (132) |  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |           |                                   |            |                             |
|-----------------|-----------|-----------------------------------|------------|-----------------------------|
|                 | 1.06 (83) | Eastern Michigan OFF vs Akron DEF | 1.14 (104) | +0.32<br>head-to-head +0.23 |
|                 | 1.02 (88) | Eastern Michigan DEF vs Akron OFF | 1.40 (9)   |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |            |                                   |            |  |
|-----------------------------|------------|-----------------------------------|------------|--|
| +0.24<br>head-to-head +0.95 | 0.78 (113) | Eastern Michigan OFF vs Akron DEF | 1.81 (125) |  |
|                             | 0.85 (49)  | Eastern Michigan DEF vs Akron OFF | 0.79 (112) |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.07 (118) | F+   | -1.93 (134) |
| -1.00 (112) | OF+  | -1.68 (133) |
| -0.89 (109) | DF+  | -1.70 (135) |
| -0.81 (123) | FEI  | -1.29 (136) |
| -0.40 (113) | OFEI | -0.63 (134) |
| -0.34 (122) | DFEI | -0.51 (134) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.40**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.48**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |             |
|------------|-------------------------|-------------|
| -0.10 (92) | NET SUCCESS RATE        | -0.43 (136) |
| 0.29 (117) | OFF SUCCESS RATE (OSR)  | 0.19 (134)  |
| 0.38 (52)  | OPP SUCCESS RATE (DSR)  | 0.62 (129)  |
| 0.40 (109) | OFF SUCCESS RATE (CFBD) | 0.43 (80)   |
| 0.42 (91)  | DEF SUCCESS RATE (CFBD) | 0.44 (110)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.33**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.06**

head-to-head +0.34

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.05 (112) | OFF PPA         | 0.05 (111) |
| 0.10 (88)  | DEF PPA ALLOWED | 0.28 (133) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.12**

head-to-head +0.17

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 47% / Rush 53%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                           |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|---------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 68.0 | Buffalo OFF vs Toledo DEF | 73.8 | -5.60 |
|                                                                                                                                                 | 69.0 | Buffalo DEF vs Toledo OFF | 68.8 |       |

POINTS / GAME

|                                                                                                                                                                    |            |                           |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------|-----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 16.7 (119) | Buffalo OFF vs Toledo DEF | 29.5 (85) | -27.1 |
|                                                                                                                                                                    | 36.0 (117) | Buffalo DEF vs Toledo OFF | 37.3 (12) |       |

YARDS / GAME

|                                                                                                                                                      |             |                           |            |        |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|---------------------------|------------|--------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 260.0 (131) | Buffalo OFF vs Toledo DEF | 372.0 (59) | -312.0 |
|                                                                                                                                                      | 480.0 (131) | Buffalo DEF vs Toledo OFF | 464.0 (18) |        |

YARDS / PLAY

|                                                                                                                                                     |           |                           |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|---------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 3.8 (134) | Buffalo OFF vs Toledo DEF | 5.0 (43) | -4.90 |
|                                                                                                                                                     | 7.0 (128) | Buffalo DEF vs Toledo OFF | 6.7 (9)  |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +18.4                                          | +9.38 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                           |            |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------|------------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 87.5 (61)  | Buffalo OFF vs Toledo DEF | 92.3 (108) | -6.38 |
|                                                                                                                                  | 92.9 (114) | Buffalo DEF vs Toledo OFF | 93.3 (26)  |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                           |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|---------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 22.2 (131) | Buffalo OFF vs Toledo DEF | 39.0 (65) | -24.6 |
|                                                                                                                   | 39.5 (70)  | Buffalo DEF vs Toledo OFF | 46.3 (33) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|             |                           |            |                               |
|-------------|---------------------------|------------|-------------------------------|
| 158.7 (119) | Buffalo OFF vs Toledo DEF | 225.0 (69) | +119.7<br>head-to-head +182.8 |
| 289.0 (124) | Buffalo DEF vs Toledo OFF | 277.5 (26) |                               |

PASS YARDS / ATTEMPT

|            |                           |          |                    |
|------------|---------------------------|----------|--------------------|
| 5.7 (123)  | Buffalo OFF vs Toledo DEF | 6.9 (53) | +3.76              |
| 10.0 (133) | Buffalo DEF vs Toledo OFF | 8.6 (25) | head-to-head +6.00 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                   |           |
|------------|-------------------|-----------|
| 35.3 (132) | Buffalo vs Toledo | 80.0 (38) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                           |           |
|----------------------|---------------------------|-----------|
| 18.2 (131)           | Buffalo OFF vs Toledo DEF | 55.6 (64) |
| 25.4 (8)             | Buffalo DEF vs Toledo OFF | 59.3 (46) |

| SACKS ALLOWED / GAME |            |                           |           |
|----------------------|------------|---------------------------|-----------|
| -11.6                | 3.3 (120)  | Buffalo OFF vs Toledo DEF | 2.50 (36) |
| head-to-head +0.59   | 1.00 (109) | Buffalo DEF vs Toledo OFF | 0.50 (6)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION %         |                   |      |
|----------------------|-------------------|------|
| 51.2                 | Buffalo vs Toledo | 64.3 |
| QB RUSH YARDS / GAME |                   |      |
| --                   | Buffalo vs Toledo | --   |

| PASSING EXPLOSIVENESS |            |                           |                    |
|-----------------------|------------|---------------------------|--------------------|
|                       | 1.19 (93)  | Buffalo OFF vs Toledo DEF | 1.34 (112)         |
|                       | 1.32 (105) | Buffalo DEF vs Toledo OFF | 1.48 (2)           |
|                       |            |                           | +0.34              |
|                       |            |                           | head-to-head +0.27 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                           |      |
|----------------------|---------------------------|------|
| 0.30                 | Buffalo OFF vs Toledo DEF | --   |
| --                   | Buffalo DEF vs Toledo OFF | 0.30 |

| RUSHING GAME         |             |                           |                     |
|----------------------|-------------|---------------------------|---------------------|
| RUSH YARDS / GAME    |             |                           |                     |
|                      | 101.3 (114) | Buffalo OFF vs Toledo DEF | 147.0 (63)          |
|                      | 191.0 (110) | Buffalo DEF vs Toledo OFF | 186.5 (36)          |
|                      |             |                           | +74.4               |
|                      |             |                           | head-to-head +129.2 |
| RUSH YARDS / ATTEMPT |             |                           |                     |
|                      | 2.80 (126)  | Buffalo OFF vs Toledo DEF | 3.8 (45)            |
|                      | 4.9 (107)   | Buffalo DEF vs Toledo OFF | 5.2 (17)            |
|                      |             |                           | +1.74               |
|                      |             |                           | head-to-head +3.50  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                           |          |
|------------|---------------------------|----------|
| 0.00 (1)   | Buffalo OFF vs Toledo DEF | 4.4 (46) |
| 3.6 (77)   | Buffalo DEF vs Toledo OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |            |                           |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.75 (117) | Buffalo OFF vs Toledo DEF | 2.65 (41) | -0.88 |
|                                                                                                                                              | 3.1 (101)  | Buffalo DEF vs Toledo OFF | 3.2 (53)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                           |           |                    |
|--------------------|-----------|---------------------------|-----------|--------------------|
|                    | 0.71 (86) | Buffalo OFF vs Toledo DEF | 0.43 (5)  | +0.72              |
|                    | 0.71 (67) | Buffalo DEF vs Toledo OFF | 0.73 (78) |                    |
|                    |           |                           |           | head-to-head +30.2 |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                           |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|---------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.19 (88) | Buffalo OFF vs Toledo DEF | 0.22 (36) | -6.55 |
|                                                                                                                                            | 0.18 (86) | Buffalo DEF vs Toledo OFF | 0.16 (57) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                           |           |                    |
|------------|------------|---------------------------|-----------|--------------------|
|            | 0.16 (100) | Buffalo OFF vs Toledo DEF | 0.14 (96) | +2.43              |
|            | 0.15 (84)  | Buffalo DEF vs Toledo OFF | 0.13 (42) |                    |
|            |            |                           |           | head-to-head +1.80 |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                           |           |                    |
|-----------------|------------|---------------------------|-----------|--------------------|
|                 | 0.73 (136) | Buffalo OFF vs Toledo DEF | 0.79 (26) | +0.06              |
|                 | 1.14 (105) | Buffalo DEF vs Toledo OFF | 1.03 (91) |                    |
|                 |            |                           |           | head-to-head +0.64 |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                           |           |                    |
|------------------|------------|---------------------------|-----------|--------------------|
|                  | 0.75 (115) | Buffalo OFF vs Toledo DEF | 1.05 (74) | +0.45              |
|                  | 1.27 (93)  | Buffalo DEF vs Toledo OFF | 1.53 (45) |                    |
|                  |            |                           |           | head-to-head +0.99 |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -1.35 (128) | F+   | 0.02 (66)  |
| -1.61 (131) | OF+  | 0.15 (58)  |
| -0.91 (112) | DF+  | -0.07 (72) |
| -0.84 (127) | FEI  | -0.04 (67) |
| -0.58 (131) | OFEI | 0.01 (56)  |
| -0.27 (106) | DFEI | -0.01 (71) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.85**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.80**

|             |                         |            |
|-------------|-------------------------|------------|
| -0.29 (124) | NET SUCCESS RATE        | 0.05 (56)  |
| 0.27 (120)  | OFF SUCCESS RATE (OSR)  | 0.55 (23)  |
| 0.56 (119)  | OPP SUCCESS RATE (DSR)  | 0.50 (100) |
| 0.35 (131)  | OFF SUCCESS RATE (CFBD) | 0.44 (71)  |
| 0.39 (59)   | DEF SUCCESS RATE (CFBD) | 0.33 (15)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.34**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.26**

head-to-head +0.34

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.01 (118) | OFF PPA         | 0.25 (33)  |
| 0.12 (92)  | DEF PPA ALLOWED | -0.01 (43) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.15**

head-to-head +0.36

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|-------|-------------|----------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +8.00 | 289.8 (122) | Central Michigan OFF vs Ohio DEF | 423.5 (103) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|       | 404.0 (90)  | Central Michigan DEF vs Ohio OFF | 301.3 (115) |                                                                                                                                                      |

YARDS / PLAY

|       |           |                                  |           |                                                                                                                                                     |
|-------|-----------|----------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +0.10 | 5.0 (92)  | Central Michigan OFF vs Ohio DEF | 5.9 (91)  | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 6.0 (102) | Central Michigan DEF vs Ohio OFF | 4.8 (109) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| --                                             | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                  |           |                                                                                                                                  |
|-------|-----------|----------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +10.2 | 100.0 (1) | Central Michigan OFF vs Ohio DEF | 83.3 (57) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 84.2 (60) | Central Michigan DEF vs Ohio OFF | 88.9 (51) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                  |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 34.0 (99)  | Central Michigan OFF vs Ohio DEF | 50.8 (127) | -14.2 |
|                                                                                                                   | 50.0 (123) | Central Michigan DEF vs Ohio OFF | 49.1 (21)  |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |            |                                  |             |                             |
|--|------------|----------------------------------|-------------|-----------------------------|
|  | 87.0 (138) | Central Michigan OFF vs Ohio DEF | 242.5 (88)  | -82.5<br>head-to-head +34.8 |
|  | 222.5 (66) | Central Michigan DEF vs Ohio OFF | 141.8 (128) |                             |

| PASS YARDS / ATTEMPT               |           |                                  |           |
|------------------------------------|-----------|----------------------------------|-----------|
| <b>-0.94</b><br>head-to-head +0.70 | 5.3 (132) | Central Michigan OFF vs Ohio DEF | 8.6 (113) |
|                                    | 7.4 (68)  | Central Michigan DEF vs Ohio OFF | 5.8 (121) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                          |           |
|-----------|--------------------------|-----------|
| 73.2 (57) | Central Michigan vs Ohio | 69.5 (63) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                  |           |  |
|----------------------|----------------------------------|-----------|--|
| 20.1 (127)           | Central Michigan OFF vs Ohio DEF | 30.1 (12) |  |
| 46.4 (43)            | Central Michigan DEF vs Ohio OFF | 39.7 (90) |  |

| SACKS ALLOWED / GAME               |           |                                  |            |
|------------------------------------|-----------|----------------------------------|------------|
| <b>-11.4</b><br>head-to-head +0.67 | 1.80 (60) | Central Michigan OFF vs Ohio DEF | 1.30 (100) |
|                                    | 1.80 (74) | Central Michigan DEF vs Ohio OFF | 2.30 (87)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                          |      |
|--------------|--------------------------|------|
| 60.6         | Central Michigan vs Ohio | 57.7 |

| QB RUSH YARDS / GAME |                          |    |
|----------------------|--------------------------|----|
| --                   | Central Michigan vs Ohio | -- |

| PASSING EXPLOSIVENESS              |           |                                  |            |
|------------------------------------|-----------|----------------------------------|------------|
| <b>+0.10</b><br>head-to-head +0.26 | 1.26 (56) | Central Michigan OFF vs Ohio DEF | 1.30 (98)  |
|                                    | 1.15 (37) | Central Michigan DEF vs Ohio OFF | 1.15 (108) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                  |      |
|----------------------|----------------------------------|------|
| 0.50                 | Central Michigan OFF vs Ohio DEF | --   |
| --                   | Central Michigan DEF vs Ohio OFF | 0.50 |

| RUSHING GAME                       |             |                                  |             |                                    |
|------------------------------------|-------------|----------------------------------|-------------|------------------------------------|
| RUSH YARDS / GAME                  |             |                                  |             |                                    |
| <b>+80.7</b><br>head-to-head +42.8 | 202.8 (23)  | Central Michigan OFF vs Ohio DEF | 181.0 (104) |                                    |
|                                    | 181.5 (105) | Central Michigan DEF vs Ohio OFF | 159.5 (54)  |                                    |
| RUSH YARDS / ATTEMPT               |             |                                  |             |                                    |
|                                    | 5.0 (22)    | Central Michigan OFF vs Ohio DEF | 4.3 (69)    | <b>+1.04</b><br>head-to-head +0.10 |
|                                    | 5.1 (113)   | Central Michigan DEF vs Ohio OFF | 4.3 (62)    |                                    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                  |          |
|------------|----------------------------------|----------|
| 0.00 (1)   | Central Michigan OFF vs Ohio DEF | 5.0 (32) |
| 2.40 (109) | Central Michigan DEF vs Ohio OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                                  |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.4 (30)  | Central Michigan OFF vs Ohio DEF | 2.75 (54) | -0.95 |
|                                                                                                                                              | 3.6 (138) | Central Michigan DEF vs Ohio OFF | 3.5 (21)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                  |           |                             |
|--------------------|------------|----------------------------------|-----------|-----------------------------|
|                    | 0.85 (10)  | Central Michigan OFF vs Ohio DEF | 0.68 (47) | +25.5<br>head-to-head +16.3 |
|                    | 0.90 (134) | Central Michigan DEF vs Ohio OFF | 0.79 (35) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                  |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.13 (17)  | Central Michigan OFF vs Ohio DEF | 0.20 (62) | -6.96 |
|                                                                                                                                            | 0.14 (127) | Central Michigan DEF vs Ohio OFF | 0.12 (11) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                                  |           |                             |
|------------|-----------|----------------------------------|-----------|-----------------------------|
|            | 0.14 (64) | Central Michigan OFF vs Ohio DEF | 0.17 (63) | +1.33<br>head-to-head +1.30 |
|            | 0.15 (84) | Central Michigan DEF vs Ohio OFF | 0.14 (67) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                  |           |                             |
|-----------------|------------|----------------------------------|-----------|-----------------------------|
|                 | 1.16 (59)  | Central Michigan OFF vs Ohio DEF | 0.97 (72) | +0.41<br>head-to-head +0.39 |
|                 | 1.34 (131) | Central Michigan DEF vs Ohio OFF | 1.18 (55) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                  |           |  |
|-----------------------------|-----------|----------------------------------|-----------|--|
| -0.24<br>head-to-head +0.31 | 1.25 (70) | Central Michigan OFF vs Ohio DEF | 0.87 (51) |  |
|                             | 0.81 (45) | Central Michigan DEF vs Ohio OFF | 0.99 (91) |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.12 (121) | F+   | -0.72 (104) |
| -1.09 (117) | OF+  | -0.73 (103) |
| -0.85 (107) | DF+  | -0.73 (97)  |
| -0.74 (117) | FEI  | -0.44 (96)  |
| -0.32 (103) | OFEI | -0.26 (93)  |
| -0.34 (122) | DFFI | -0.27 (106) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFFI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.13

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFFI-family scale. Scale: greater than +0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.30

|             |                         |             |
|-------------|-------------------------|-------------|
| -0.23 (115) | NET SUCCESS RATE        | -0.12 (103) |
| 0.33 (98)   | OFF SUCCESS RATE (OSR)  | 0.47 (52)   |
| 0.56 (119)  | OPP SUCCESS RATE (DSR)  | 0.59 (125)  |
| 0.38 (119)  | OFF SUCCESS RATE (CFBD) | 0.45 (63)   |
| 0.45 (119)  | DEF SUCCESS RATE (CFBD) | 0.43 (98)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.11

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.19

head-to-head +0.11

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.10 (94)  | OFF PPA         | 0.17 (65)  |
| 0.17 (110) | DEF PPA ALLOWED | 0.20 (121) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.12

head-to-head +0.04

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN                                                                                                                                                          |             |                                  |             |        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------------------------------|-------------|--------|
| PLAYS / GAME                                                                                                                                                       |             |                                  |             |        |
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.                    | 60.5        | Kent State OFF vs W Michigan DEF | 61.8        | -0.60  |
|                                                                                                                                                                    | 63.0        | Kent State DEF vs W Michigan OFF | 62.3        |        |
| POINTS / GAME                                                                                                                                                      |             |                                  |             |        |
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 9.8 (136)   | Kent State OFF vs W Michigan DEF | 20.8 (38)   | -21.7  |
|                                                                                                                                                                    | 35.5 (115)  | Kent State DEF vs W Michigan OFF | 16.8 (118)  |        |
| YARDS / GAME                                                                                                                                                       |             |                                  |             |        |
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               | 233.3 (134) | Kent State OFF vs W Michigan DEF | 322.0 (34)  | -129.5 |
|                                                                                                                                                                    | 408.8 (94)  | Kent State DEF vs W Michigan OFF | 276.0 (129) |        |
| YARDS / PLAY                                                                                                                                                       |             |                                  |             |        |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 3.9 (133)   | Kent State OFF vs W Michigan DEF | 5.2 (52)    | -1.80  |
|                                                                                                                                                                    | 6.5 (118)   | Kent State DEF vs W Michigan OFF | 4.4 (124)   |        |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| +8.85                                          | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |            |                                  |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 66.7 (123) | Kent State OFF vs W Michigan DEF | 81.8 (52) | -34.4 |
|                                                                                                                                  | 92.9 (114) | Kent State DEF vs W Michigan OFF | 90.0 (45) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                  |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 33.3 (103) | Kent State OFF vs W Michigan DEF | 39.6 (71) | -9.21 |
|                                                                                                                   | 42.5 (98)  | Kent State DEF vs W Michigan OFF | 39.6 (74) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |             |                                  |             |                             |
|-------------------|-------------|----------------------------------|-------------|-----------------------------|
| PASS YARDS / GAME |             |                                  |             |                             |
|                   | 137.0 (131) | Kent State OFF vs W Michigan DEF | 166.3 (17)  | -68.7<br>head-to-head +74.8 |
|                   | 246.3 (90)  | Kent State DEF vs W Michigan OFF | 131.8 (132) |                             |

| PASS YARDS / ATTEMPT |           |                                  |           |                             |
|----------------------|-----------|----------------------------------|-----------|-----------------------------|
|                      | 5.3 (132) | Kent State OFF vs W Michigan DEF | 8.1 (92)  | +0.36<br>head-to-head +1.80 |
|                      | 9.7 (131) | Kent State DEF vs W Michigan OFF | 5.5 (127) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                          |           |
|-----------|--------------------------|-----------|
| 70.4 (59) | Kent State vs W Michigan | 57.8 (99) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                  |           |
|----------------------|----------------------------------|-----------|
| 14.6 (133)           | Kent State OFF vs W Michigan DEF | 52.0 (56) |
| 50.9 (53)            | Kent State DEF vs W Michigan OFF | 39.7 (89) |

| SACKS ALLOWED / GAME        |           |                                  |           |  |
|-----------------------------|-----------|----------------------------------|-----------|--|
| -11.1<br>head-to-head +3.04 | 1.30 (30) | Kent State OFF vs W Michigan DEF | 1.80 (74) |  |
|                             | 1.50 (88) | Kent State DEF vs W Michigan OFF | 1.80 (60) |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                          |      |
|--------------|--------------------------|------|
| 55.8         | Kent State vs W Michigan | 66.3 |

| QB RUSH YARDS / GAME |                          |    |
|----------------------|--------------------------|----|
| --                   | Kent State vs W Michigan | -- |

| PASSING EXPLOSIVENESS       |           |                                  |            |  |
|-----------------------------|-----------|----------------------------------|------------|--|
| -0.16<br>head-to-head +0.04 | 1.27 (53) | Kent State OFF vs W Michigan DEF | 1.04 (11)  |  |
|                             | 1.17 (46) | Kent State DEF vs W Michigan OFF | 1.10 (126) |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                  |      |
|----------------------|----------------------------------|------|
| 1.00                 | Kent State OFF vs W Michigan DEF | --   |
| --                   | Kent State DEF vs W Michigan OFF | 0.30 |

| RUSHING GAME         |            |                                  |            |                             |
|----------------------|------------|----------------------------------|------------|-----------------------------|
| RUSH YARDS / GAME    |            |                                  |            |                             |
|                      | 96.3 (121) | Kent State OFF vs W Michigan DEF | 155.8 (71) | +3.71<br>head-to-head +54.7 |
|                      | 162.5 (80) | Kent State DEF vs W Michigan OFF | 144.3 (73) |                             |
| RUSH YARDS / ATTEMPT |            |                                  |            |                             |
|                      | 2.90 (121) | Kent State OFF vs W Michigan DEF | 3.9 (48)   | +0.04<br>head-to-head +1.60 |
|                      | 4.5 (85)   | Kent State DEF vs W Michigan OFF | 3.9 (83)   |                             |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                  |            |
|------------|----------------------------------|------------|
| 0.00 (1)   | Kent State OFF vs W Michigan DEF | 2.20 (111) |
| 4.8 (35)   | Kent State DEF vs W Michigan OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |            |                                  |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.70 (122) | Kent State OFF vs W Michigan DEF | 3.0 (93)  | -0.39 |
|                                                                                                                                              | 3.2 (112)  | Kent State DEF vs W Michigan OFF | 2.94 (97) |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                                  |           |                             |
|--------------------|------------|----------------------------------|-----------|-----------------------------|
|                    | 0.55 (132) | Kent State OFF vs W Michigan DEF | 0.69 (61) | +12.3<br>head-to-head +31.6 |
|                    | 0.77 (100) | Kent State DEF vs W Michigan OFF | 0.79 (38) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                  |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.21 (116) | Kent State OFF vs W Michigan DEF | 0.17 (93) | -6.22 |
|                                                                                                                                            | 0.16 (106) | Kent State DEF vs W Michigan OFF | 0.16 (52) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                  |            |                             |
|------------|------------|----------------------------------|------------|-----------------------------|
|            | 0.17 (112) | Kent State OFF vs W Michigan DEF | 0.12 (128) | +2.73<br>head-to-head +0.60 |
|            | 0.14 (88)  | Kent State DEF vs W Michigan OFF | 0.13 (50)  |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                  |           |                             |
|-----------------|------------|----------------------------------|-----------|-----------------------------|
|                 | 0.83 (129) | Kent State OFF vs W Michigan DEF | 0.91 (43) | +0.06<br>head-to-head +0.43 |
|                 | 1.14 (106) | Kent State DEF vs W Michigan OFF | 1.02 (92) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                  |            |                             |
|------------------|------------|----------------------------------|------------|-----------------------------|
|                  | 0.61 (120) | Kent State OFF vs W Michigan DEF | 0.43 (17)  | -0.56<br>head-to-head +0.74 |
|                  | 0.95 (67)  | Kent State DEF vs W Michigan OFF | 0.84 (107) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -1.56 (131) | F+   | -0.49 (92)  |
| -1.62 (132) | OF+  | -0.83 (106) |
| -1.20 (124) | DF+  | -0.08 (74)  |
| -0.97 (131) | FEI  | -0.30 (85)  |
| -0.52 (126) | OFEI | -0.28 (97)  |
| -0.41 (129) | DFEI | -0.04 (78)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.61

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.67

|             |                         |            |
|-------------|-------------------------|------------|
| -0.26 (120) | NET SUCCESS RATE        | -0.02 (75) |
| 0.23 (127)  | OFF SUCCESS RATE (OSR)  | 0.37 (87)  |
| 0.48 (93)   | OPP SUCCESS RATE (DSR)  | 0.39 (55)  |
| 0.33 (137)  | OFF SUCCESS RATE (CFBD) | 0.42 (98)  |
| 0.47 (127)  | DEF SUCCESS RATE (CFBD) | 0.46 (121) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.24

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.01

head-to-head +0.24

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|             |                 |           |
|-------------|-----------------|-----------|
| -0.04 (125) | OFF PPA         | 0.10 (91) |
| 0.15 (101)  | DEF PPA ALLOWED | 0.09 (86) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.03

head-to-head +0.19

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|       |      |                         |      |                                                                                                                                                 |
|-------|------|-------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +19.0 | 68.0 | UConn OFF vs Temple DEF | 67.0 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|       | 76.8 | UConn DEF vs Temple OFF | 58.8 |                                                                                                                                                 |

POINTS / GAME

|       |           |                         |           |                                                                                                                                                                    |
|-------|-----------|-------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +4.70 | 31.0 (48) | UConn OFF vs Temple DEF | 27.5 (77) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 31.0 (98) | UConn DEF vs Temple OFF | 22.8 (81) |                                                                                                                                                                    |

YARDS / GAME

|                                                                                                                                                      |             |                         |            |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-------------------------|------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 379.8 (61)  | UConn OFF vs Temple DEF | 396.5 (84) | -33.8 |
|                                                                                                                                                      | 449.8 (118) | UConn DEF vs Temple OFF | 360.3 (77) |       |

YARDS / PLAY

|                                                                                                                                                     |          |                         |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 5.6 (59) | UConn OFF vs Temple DEF | 5.9 (91) | -0.50 |
|                                                                                                                                                     | 5.9 (91) | UConn DEF vs Temple OFF | 6.1 (35) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |    |
|------------------------------------------------|----|
| +4.48                                          | -- |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |           |                         |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 83.3 (76) | UConn OFF vs Temple DEF | 87.5 (75) | -6.30 |
|                                                                                                                                  | 88.2 (85) | UConn DEF vs Temple OFF | 88.9 (51) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |            |                         |            |                                                                                                                   |
|-------|------------|-------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +1.50 | 40.0 (68)  | UConn OFF vs Temple DEF | 51.9 (131) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 46.7 (114) | UConn DEF vs Temple OFF | 43.8 (40)  |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |             |                         |             |                             |
|--|-------------|-------------------------|-------------|-----------------------------|
|  | 228.0 (64)  | UConn OFF vs Temple DEF | 234.5 (81)  | +31.8<br>head-to-head +16.1 |
|  | 327.3 (137) | UConn DEF vs Temple OFF | 151.3 (125) |                             |

PASS YARDS / ATTEMPT

|                                    |          |                         |          |
|------------------------------------|----------|-------------------------|----------|
| <b>+0.96</b><br>head-to-head +0.00 | 7.7 (52) | UConn OFF vs Temple DEF | 8.1 (92) |
|                                    | 8.1 (92) | UConn DEF vs Temple OFF | 7.7 (52) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                 |           |
|-----------|-----------------|-----------|
| 77.9 (48) | UConn vs Temple | 84.2 (23) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                         |           |
|----------------------|-------------------------|-----------|
| 50.4 (67)            | UConn OFF vs Temple DEF | 44.9 (38) |
| 39.0 (28)            | UConn DEF vs Temple OFF | 57.3 (53) |

| SACKS ALLOWED / GAME               |            |                         |            |
|------------------------------------|------------|-------------------------|------------|
| <b>-7.80</b><br>head-to-head +5.33 | 3.3 (120)  | UConn OFF vs Temple DEF | 0.50 (131) |
|                                    | 1.30 (100) | UConn DEF vs Temple OFF | 1.50 (42)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                 |      |
|--------------|-----------------|------|
| 55.1         | UConn vs Temple | 57.0 |

| QB RUSH YARDS / GAME |                 |    |
|----------------------|-----------------|----|
| --                   | UConn vs Temple | -- |

| PASSING EXPLOSIVENESS              |           |                         |           |
|------------------------------------|-----------|-------------------------|-----------|
| <b>+0.10</b><br>head-to-head +0.02 | 1.41 (10) | UConn OFF vs Temple DEF | 1.15 (38) |
|                                    | 1.26 (80) | UConn DEF vs Temple OFF | 1.29 (43) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                         |      |
|----------------------|-------------------------|------|
| 0.30                 | UConn OFF vs Temple DEF | --   |
| --                   | UConn DEF vs Temple OFF | 0.30 |

| RUSHING GAME         |            |                         |            |                                                |
|----------------------|------------|-------------------------|------------|------------------------------------------------|
| RUSH YARDS / GAME    |            |                         |            |                                                |
|                      | 151.8 (65) | UConn OFF vs Temple DEF | 162.0 (79) | <div>+28.4</div> <div>head-to-head +17.7</div> |
|                      | 122.5 (43) | UConn DEF vs Temple OFF | 209.0 (19) |                                                |
| RUSH YARDS / ATTEMPT |            |                         |            |                                                |
|                      | 4.3 (62)   | UConn OFF vs Temple DEF | 4.3 (69)   | <div>+0.74</div> <div>head-to-head +0.50</div> |
|                      | 3.5 (32)   | UConn DEF vs Temple OFF | 5.6 (8)    |                                                |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                         |            |
|------------|-------------------------|------------|
| 0.00 (1)   | UConn OFF vs Temple DEF | 2.40 (109) |
| 3.8 (71)   | UConn DEF vs Temple OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                         |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.2 (62)  | UConn OFF vs Temple DEF | 2.85 (71) | -0.13 |
|                                                                                                                                              | 2.81 (66) | UConn DEF vs Temple OFF | 3.3 (35)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |            |                         |            |  |
|-----------------------------|------------|-------------------------|------------|--|
| +4.96<br>head-to-head +11.2 | 0.69 (100) | UConn OFF vs Temple DEF | 0.80 (107) |  |
|                             | 0.68 (48)  | UConn DEF vs Temple OFF | 0.70 (97)  |  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                         |            |                                                                                                                                            |
|------------|-----------|-------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +4.87      | 0.18 (72) | UConn OFF vs Temple DEF | 0.12 (133) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|            | 0.18 (86) | UConn DEF vs Temple OFF | 0.17 (66)  |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                         |            |  |
|-----------------------------|-----------|-------------------------|------------|--|
| +6.03<br>head-to-head +1.10 | 0.14 (59) | UConn OFF vs Temple DEF | 0.11 (137) |  |
|                             | 0.16 (71) | UConn DEF vs Temple OFF | 0.10 (10)  |  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                         |           |  |
|-----------------------------|-----------|-------------------------|-----------|--|
| +0.09<br>head-to-head +0.30 | 1.20 (52) | UConn OFF vs Temple DEF | 0.99 (76) |  |
|                             | 0.67 (10) | UConn DEF vs Temple OFF | 1.22 (44) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                         |           |  |
|-----------------------------|-----------|-------------------------|-----------|--|
| -0.25<br>head-to-head +0.05 | 1.60 (38) | UConn OFF vs Temple DEF | 0.50 (21) |  |
|                             | 0.35 (10) | UConn DEF vs Temple OFF | 1.69 (26) |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.47 (90)  | F+   | -0.47 (90)  |
| 0.03 (67)   | OF+  | -0.13 (76)  |
| -0.98 (117) | DF+  | -0.75 (99)  |
| -0.45 (98)  | FEI  | -0.40 (94)  |
| -0.08 (72)  | OFEI | -0.09 (73)  |
| -0.38 (127) | DFEI | -0.28 (110) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.09**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.05**

|            |                         |            |
|------------|-------------------------|------------|
| -0.10 (99) | NET SUCCESS RATE        | -0.07 (89) |
| 0.42 (70)  | OFF SUCCESS RATE (OSR)  | 0.46 (57)  |
| 0.52 (106) | OPP SUCCESS RATE (DSR)  | 0.53 (107) |
| 0.44 (74)  | OFF SUCCESS RATE (CFBD) | 0.42 (96)  |
| 0.41 (82)  | DEF SUCCESS RATE (CFBD) | 0.45 (115) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.03**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.13**

head-to-head +0.03

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.21 (51) | OFF PPA         | 0.21 (50)  |
| 0.06 (69) | DEF PPA ALLOWED | 0.17 (111) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.16**

head-to-head +0.10

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               | 288.3 (123) | Rice OFF vs East Carolina DEF | 385.3 (73)  | -7.40 |
|                                                                                                                                                                    | 396.0 (81)  | Rice DEF vs East Carolina OFF | 285.0 (124) |       |
| YARDS / PLAY                                                                                                                                                       |             |                               |             |       |
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                | 4.8 (109)   | Rice OFF vs East Carolina DEF | 5.3 (57)    | -0.20 |
|                                                                                                                                                                    | 5.8 (83)    | Rice DEF vs East Carolina OFF | 4.5 (121)   |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| +10.8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | -- |
| <b>THE FRAUD INDEX &amp; FRAUD GAP (POINTS VS. YARDS):</b> Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |    |

| RED ZONE % |           |                               |             |                                                                                                                                  |
|------------|-----------|-------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------|
| +13.5      | 80.0 (94) | Rice OFF vs East Carolina DEF | 100.0 (128) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 79.0 (38) | Rice DEF vs East Carolina OFF | 87.5 (61)   |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                               |            |       |
|-------------------------------------------------------------------------------------------------------------------|------------|-------------------------------|------------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 19.6 (136) | Rice OFF vs East Carolina DEF | 40.0 (74)  | -1.02 |
|                                                                                                                   | 46.3 (113) | Rice DEF vs East Carolina OFF | 14.3 (137) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |            |                               |             |                             |
|-------------------|------------|-------------------------------|-------------|-----------------------------|
| PASS YARDS / GAME |            |                               |             |                             |
|                   | 98.0 (137) | Rice OFF vs East Carolina DEF | 207.0 (44)  | -74.0<br>head-to-head +67.8 |
|                   | 208.5 (51) | Rice DEF vs East Carolina OFF | 164.3 (117) |                             |

| PASS YARDS / ATTEMPT               |           |                               |           |
|------------------------------------|-----------|-------------------------------|-----------|
| <b>-0.64</b><br>head-to-head +0.70 | 6.4 (104) | Rice OFF vs East Carolina DEF | 7.8 (82)  |
|                                    | 7.1 (56)  | Rice DEF vs East Carolina OFF | 6.4 (104) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                       |            |
|------------|-----------------------|------------|
| 53.0 (113) | Rice vs East Carolina | 41.5 (128) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                               |            |
|----------------------|-------------------------------|------------|
| 33.8 (100)           | Rice OFF vs East Carolina DEF | 71.6 (99)  |
| 39.0 (29)            | Rice DEF vs East Carolina OFF | 19.6 (129) |

| SACKS ALLOWED / GAME |                               |            |                                    |
|----------------------|-------------------------------|------------|------------------------------------|
| 1.80 (60)            | Rice OFF vs East Carolina DEF | 1.00 (109) | <b>-13.4</b><br>head-to-head +3.30 |
| 1.00 (109)           | Rice DEF vs East Carolina OFF | 2.30 (87)  |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                       |      |
|--------------|-----------------------|------|
| 54.1         | Rice vs East Carolina | 55.8 |

| QB RUSH YARDS / GAME |                       |    |
|----------------------|-----------------------|----|
| --                   | Rice vs East Carolina | -- |

| PASSING EXPLOSIVENESS |                               |            |                                    |
|-----------------------|-------------------------------|------------|------------------------------------|
| 1.14 (115)            | Rice OFF vs East Carolina DEF | 1.31 (103) | <b>+0.01</b><br>head-to-head +0.02 |
| 1.31 (104)            | Rice DEF vs East Carolina OFF | 1.17 (100) |                                    |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                               |      |
|----------------------|-------------------------------|------|
| 0.30                 | Rice OFF vs East Carolina DEF | --   |
| --                   | Rice DEF vs East Carolina OFF | 0.70 |

| RUSHING GAME                       |                               |                               |                                    |
|------------------------------------|-------------------------------|-------------------------------|------------------------------------|
| RUSH YARDS / GAME                  |                               |                               |                                    |
| <b>+65.5</b><br>head-to-head +60.4 | 190.3 (32)                    | Rice OFF vs East Carolina DEF | 178.3 (103)                        |
|                                    | 187.5 (108)                   | Rice DEF vs East Carolina OFF | 120.7 (92)                         |
| RUSH YARDS / ATTEMPT               |                               |                               |                                    |
| 4.5 (47)                           | Rice OFF vs East Carolina DEF | 3.9 (48)                      | <b>+0.14</b><br>head-to-head +0.10 |
| 5.0 (110)                          | Rice DEF vs East Carolina OFF | 3.5 (99)                      |                                    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                               |          |
|------------|-------------------------------|----------|
| 0.00 (1)   | Rice OFF vs East Carolina DEF | 5.5 (18) |
| 4.0 (63)   | Rice DEF vs East Carolina OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                               |            | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|------------|-----------|-------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.22      | 3.1 (69)  | Rice OFF vs East Carolina DEF | 2.25 (10)  |                                                                                                                                              |
|            | 2.73 (52) | Rice DEF vs East Carolina OFF | 2.43 (134) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                               |           |                             |
|--------------------|-----------|-------------------------------|-----------|-----------------------------|
|                    | 0.79 (40) | Rice OFF vs East Carolina DEF | 0.58 (18) |                             |
|                    | 0.68 (50) | Rice DEF vs East Carolina OFF | 0.73 (81) |                             |
|                    |           |                               |           | -2.88<br>head-to-head +3.63 |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                               |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|-------------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.16 (60) | Rice OFF vs East Carolina DEF | 0.29 (4)   |       |
|                                                                                                                                            | 0.20 (64) | Rice DEF vs East Carolina OFF | 0.20 (102) |       |
|                                                                                                                                            |           |                               |            | -6.03 |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                               |            |                             |
|------------|-----------|-------------------------------|------------|-----------------------------|
|            | 0.15 (80) | Rice OFF vs East Carolina DEF | 0.19 (23)  |                             |
|            | 0.14 (95) | Rice DEF vs East Carolina OFF | 0.18 (123) |                             |
|            |           |                               |            | -1.67<br>head-to-head +2.00 |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                               |            |  |
|-----------------------------|-----------|-------------------------------|------------|--|
| +0.02<br>head-to-head +0.20 | 1.12 (67) | Rice OFF vs East Carolina DEF | 1.01 (85)  |  |
|                             | 1.05 (93) | Rice DEF vs East Carolina OFF | 0.88 (121) |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                               |           |                             |
|------------------|------------|-------------------------------|-----------|-----------------------------|
|                  | 1.52 (47)  | Rice OFF vs East Carolina DEF | 0.75 (40) |                             |
|                  | 1.64 (122) | Rice DEF vs East Carolina OFF | 1.68 (29) |                             |
|                  |            |                               |           | +0.96<br>head-to-head +1.04 |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -1.10 (119) | F+   | -0.24 (76) |
| -1.08 (116) | OF+  | -0.54 (95) |
| -0.88 (108) | DF+  | 0.18 (57)  |
| -0.76 (119) | FEI  | -0.17 (76) |
| -0.38 (110) | OFEI | -0.28 (97) |
| -0.31 (115) | DFEI | 0.15 (50)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.56

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.59

|             |                         |            |
|-------------|-------------------------|------------|
| -0.26 (120) | NET SUCCESS RATE        | -0.10 (96) |
| 0.32 (110)  | OFF SUCCESS RATE (OSR)  | 0.29 (114) |
| 0.57 (123)  | OPP SUCCESS RATE (DSR)  | 0.39 (60)  |
| 0.42 (91)   | OFF SUCCESS RATE (CFBD) | 0.40 (107) |
| 0.42 (89)   | DEF SUCCESS RATE (CFBD) | 0.35 (31)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.16

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.02

head-to-head +0.15

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.03 (115) | OFF PPA         | 0.06 (110) |
| 0.12 (91)  | DEF PPA ALLOWED | -0.02 (40) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

-0.04

head-to-head +0.16

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI -2.5

Pass 47% / Rush 53%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

| PLAYS / GAME |      |                                |      |                                                                                                                                                 |
|--------------|------|--------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +4.70        | 71.8 | Maryland OFF vs Ohio State DEF | 65.2 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|              | 68.5 | Maryland DEF vs Ohio State OFF | 70.4 |                                                                                                                                                 |

| POINTS / GAME                                                                                                                                                      |            |                                |          |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 22.5 (82)  | Maryland OFF vs Ohio State DEF | 12.6 (7) | -44.9 |
|                                                                                                                                                                    | 37.8 (121) | Maryland DEF vs Ohio State OFF | 42.2 (7) |       |

| YARDS / GAME                                                                                                                                         |            |                                |           |        |
|------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|--------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 368.5 (67) | Maryland OFF vs Ohio State DEF | 267.0 (9) | -276.6 |
|                                                                                                                                                      | 397.5 (85) | Maryland DEF vs Ohio State OFF | 514.6 (2) |        |

| YARDS / PLAY                                                                                                                                        |          |                                |         |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|--------------------------------|---------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 5.1 (87) | Maryland OFF vs Ohio State DEF | 4.1 (9) | -3.90 |
|                                                                                                                                                     | 5.8 (83) | Maryland DEF vs Ohio State OFF | 7.3 (3) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +6.54                                          | +5.92 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |            |                                |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 92.9 (27)  | Maryland OFF vs Ohio State DEF | 80.0 (41) | -4.64 |
|                                                                                                                                  | 92.3 (108) | Maryland DEF vs Ohio State OFF | 85.2 (68) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |            |                                |           |       |
|-------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 29.8 (116) | Maryland OFF vs Ohio State DEF | 38.0 (56) | -20.0 |
|                                                                                                                   | 41.2 (83)  | Maryland DEF vs Ohio State OFF | 46.7 (30) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

| PASS YARDS / GAME |            |                                |            |                               |
|-------------------|------------|--------------------------------|------------|-------------------------------|
|                   | 276.3 (27) | Maryland OFF vs Ohio State DEF | 168.0 (18) | +139.5<br>head-to-head +142.0 |
|                   | 229.3 (76) | Maryland DEF vs Ohio State OFF | 357.0 (2)  |                               |

| PASS YARDS / ATTEMPT |          |                                |          |                    |
|----------------------|----------|--------------------------------|----------|--------------------|
|                      | 6.5 (98) | Maryland OFF vs Ohio State DEF | 5.1 (4)  | +3.86              |
|                      | 7.5 (71) | Maryland DEF vs Ohio State OFF | 11.2 (2) | head-to-head +7.10 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                        |          |
|------------|------------------------|----------|
| 45.3 (125) | Maryland vs Ohio State | 93.1 (3) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                |            |
|----------------------|--------------------------------|------------|
| 33.5 (101)           | Maryland OFF vs Ohio State DEF | 87.0 (132) |
| 64.5 (87)            | Maryland DEF vs Ohio State OFF | 88.5 (4)   |

| SACKS ALLOWED / GAME |           |                                |           |
|----------------------|-----------|--------------------------------|-----------|
| -8.36                | 1.50 (42) | Maryland OFF vs Ohio State DEF | 1.80 (74) |
| head-to-head +2.87   | 2.30 (48) | Maryland DEF vs Ohio State OFF | 1.80 (60) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                        |      |
|--------------|------------------------|------|
| 63.3         | Maryland vs Ohio State | 73.1 |

| QB RUSH YARDS / GAME |                        |    |
|----------------------|------------------------|----|
| --                   | Maryland vs Ohio State | -- |

| PASSING EXPLOSIVENESS |           |                                |                    |
|-----------------------|-----------|--------------------------------|--------------------|
|                       | 1.28 (49) | Maryland OFF vs Ohio State DEF | 1.19 (55)          |
|                       | 1.20 (65) | Maryland DEF vs Ohio State OFF | 1.31 (30)          |
|                       |           |                                | +0.05              |
|                       |           |                                | head-to-head +0.05 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                |      |
|----------------------|--------------------------------|------|
| 1.50                 | Maryland OFF vs Ohio State DEF | --   |
| --                   | Maryland DEF vs Ohio State OFF | 0.80 |

## RUSHING GAME

| RUSH YARDS / GAME |            |                                |                     |
|-------------------|------------|--------------------------------|---------------------|
|                   | 92.3 (124) | Maryland OFF vs Ohio State DEF | 99.0 (17)           |
|                   | 168.3 (88) | Maryland DEF vs Ohio State OFF | 157.6 (56)          |
|                   |            |                                | +22.8               |
|                   |            |                                | head-to-head +134.6 |

| RUSH YARDS / ATTEMPT |           |                                |                    |
|----------------------|-----------|--------------------------------|--------------------|
|                      | 3.3 (107) | Maryland OFF vs Ohio State DEF | 3.3 (25)           |
|                      | 4.7 (100) | Maryland DEF vs Ohio State OFF | 4.3 (62)           |
|                      |           |                                | +0.64              |
|                      |           |                                | head-to-head +2.40 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                |          |
|------------|--------------------------------|----------|
| 0.00 (1)   | Maryland OFF vs Ohio State DEF | 4.0 (63) |
| 4.8 (35)   | Maryland DEF vs Ohio State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                                |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|--------------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.96 (95) | Maryland OFF vs Ohio State DEF | 2.65 (40) | -0.15 |
|                                                                                                                                              | 2.61 (31) | Maryland DEF vs Ohio State OFF | 3.1 (64)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                                |           |                             |
|--------------------|-----------|--------------------------------|-----------|-----------------------------|
|                    | 0.71 (86) | Maryland OFF vs Ohio State DEF | 0.70 (62) | +7.74<br>head-to-head +10.1 |
|                    | 0.72 (72) | Maryland DEF vs Ohio State OFF | 0.79 (35) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------------------|-----------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.21 (114) | Maryland OFF vs Ohio State DEF | 0.20 (61) | -3.57 |
|                                                                                                                                            | 0.20 (56)  | Maryland DEF vs Ohio State OFF | 0.17 (68) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                                |           |                             |
|------------|-----------|--------------------------------|-----------|-----------------------------|
|            | 0.14 (61) | Maryland OFF vs Ohio State DEF | 0.20 (20) | +3.23<br>head-to-head +6.70 |
|            | 0.15 (78) | Maryland DEF vs Ohio State OFF | 0.12 (31) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                |            |  |
|-----------------------------|-----------|--------------------------------|------------|--|
| +0.17<br>head-to-head +0.23 | 1.17 (57) | Maryland OFF vs Ohio State DEF | 1.10 (100) |  |
|                             | 1.01 (86) | Maryland DEF vs Ohio State OFF | 1.03 (90)  |  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                |            |                             |
|------------------|------------|--------------------------------|------------|-----------------------------|
|                  | 1.41 (53)  | Maryland OFF vs Ohio State DEF | 0.60 (28)  | -0.15<br>head-to-head +0.19 |
|                  | 1.35 (101) | Maryland DEF vs Ohio State OFF | 0.85 (104) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |          |
|------------|------|----------|
| -0.03 (68) | F+   | 2.20 (2) |
| -0.16 (79) | OF+  | 2.13 (1) |
| 0.08 (63)  | DF+  | 2.03 (2) |
| -0.14 (75) | FEI  | 1.40 (3) |
| -0.25 (91) | OFEI | 0.74 (2) |
| 0.09 (56)  | DFEI | 0.68 (4) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-1.58**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-1.54**

|            |                         |           |
|------------|-------------------------|-----------|
| -0.09 (91) | NET SUCCESS RATE        | 0.39 (7)  |
| 0.36 (88)  | OFF SUCCESS RATE (OSR)  | 0.63 (8)  |
| 0.45 (78)  | OPP SUCCESS RATE (DSR)  | 0.24 (6)  |
| 0.42 (88)  | OFF SUCCESS RATE (CFBD) | 0.52 (10) |
| 0.40 (77)  | DEF SUCCESS RATE (CFBD) | 0.36 (37) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.47**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.23**

head-to-head +0.47

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.07 (105) | OFF PPA         | 0.35 (5)   |
| 0.07 (75)  | DEF PPA ALLOWED | -0.08 (17) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.21**

head-to-head +0.43

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 57% / Rush 43%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|       |      |                               |      |                                                                                                                                                 |
|-------|------|-------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +8.30 | 72.8 | Tennessee OFF vs Arkansas DEF | 63.5 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|       | 67.8 | Tennessee DEF vs Arkansas OFF | 68.8 |                                                                                                                                                 |

POINTS / GAME

|       |           |                               |            |                                                                                                                                                                    |
|-------|-----------|-------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +30.2 | 32.0 (41) | Tennessee OFF vs Arkansas DEF | 32.0 (106) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 16.8 (24) | Tennessee DEF vs Arkansas OFF | 17.0 (115) |                                                                                                                                                                    |

YARDS / GAME

|        |            |                               |             |                                                                                                                                                      |
|--------|------------|-------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +117.6 | 359.3 (78) | Tennessee OFF vs Arkansas DEF | 386.8 (75)  | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|        | 313.5 (30) | Tennessee DEF vs Arkansas OFF | 315.0 (111) |                                                                                                                                                      |

YARDS / PLAY

|       |           |                               |           |                                                                                                                                                     |
|-------|-----------|-------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.80 | 4.9 (102) | Tennessee OFF vs Arkansas DEF | 6.1 (106) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 4.6 (16)  | Tennessee DEF vs Arkansas OFF | 4.6 (117) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| -0.33                                          | +6.46 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                               |            |                                                                                                                                  |
|-------|-----------|-------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +17.5 | 100.0 (1) | Tennessee OFF vs Arkansas DEF | 94.4 (121) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 84.6 (64) | Tennessee DEF vs Arkansas OFF | 92.3 (31)  |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                               |            |                                                                                                                   |
|-------|-----------|-------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +8.09 | 34.5 (96) | Tennessee OFF vs Arkansas DEF | 52.0 (132) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 38.5 (57) | Tennessee DEF vs Arkansas OFF | 40.0 (68)  |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |             |                               |            |                             |
|--|-------------|-------------------------------|------------|-----------------------------|
|  | 140.8 (130) | Tennessee OFF vs Arkansas DEF | 214.3 (60) | -17.5<br>head-to-head +74.2 |
|  | 192.5 (35)  | Tennessee DEF vs Arkansas OFF | 236.8 (57) |                             |

| PASS YARDS / ATTEMPT               |           |                               |           |
|------------------------------------|-----------|-------------------------------|-----------|
| <b>-0.44</b><br>head-to-head +2.00 | 5.8 (121) | Tennessee OFF vs Arkansas DEF | 8.6 (113) |
|                                    | 6.1 (17)  | Tennessee DEF vs Arkansas OFF | 6.3 (107) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                       |            |
|------------|-----------------------|------------|
| 55.8 (105) | Tennessee vs Arkansas | 55.6 (106) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                               |           |
|----------------------|-------------------------------|-----------|
| 62.9 (42)            | Tennessee OFF vs Arkansas DEF | 53.7 (60) |
| 85.4 (131)           | Tennessee DEF vs Arkansas OFF | 39.4 (91) |

| SACKS ALLOWED / GAME               |           |                               |            |
|------------------------------------|-----------|-------------------------------|------------|
| <b>-12.2</b><br>head-to-head +1.25 | 3.8 (132) | Tennessee OFF vs Arkansas DEF | 1.50 (88)  |
|                                    | 4.0 (2)   | Tennessee DEF vs Arkansas OFF | 2.80 (104) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                       |      |
|--------------|-----------------------|------|
| 58.8         | Tennessee vs Arkansas | 58.3 |

| QB RUSH YARDS / GAME |                       |    |
|----------------------|-----------------------|----|
| --                   | Tennessee vs Arkansas | -- |

| PASSING EXPLOSIVENESS              |           |                               |            |
|------------------------------------|-----------|-------------------------------|------------|
| <b>-0.19</b><br>head-to-head +0.07 | 1.17 (96) | Tennessee OFF vs Arkansas DEF | 1.11 (27)  |
|                                    | 1.10 (25) | Tennessee DEF vs Arkansas OFF | 1.11 (119) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                               |      |
|----------------------|-------------------------------|------|
| 0.30                 | Tennessee OFF vs Arkansas DEF | --   |
| --                   | Tennessee DEF vs Arkansas OFF | 0.80 |

## RUSHING GAME

| RUSH YARDS / GAME                   |            |                               |            |
|-------------------------------------|------------|-------------------------------|------------|
| <b>+87.9</b><br>head-to-head +191.7 | 218.5 (14) | Tennessee OFF vs Arkansas DEF | 172.5 (95) |
|                                     | 121.0 (38) | Tennessee DEF vs Arkansas OFF | 78.3 (135) |

| RUSH YARDS / ATTEMPT               |          |                               |            |
|------------------------------------|----------|-------------------------------|------------|
| <b>+1.24</b><br>head-to-head +3.00 | 4.9 (28) | Tennessee OFF vs Arkansas DEF | 4.7 (100)  |
|                                    | 3.8 (45) | Tennessee DEF vs Arkansas OFF | 2.80 (126) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                               |          |
|------------|-------------------------------|----------|
| 0.00 (1)   | Tennessee OFF vs Arkansas DEF | 3.6 (77) |
| 7.2 (3)    | Tennessee DEF vs Arkansas OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                               |            |
|------------|-----------|-------------------------------|------------|
| +0.92      | 3.5 (14)  | Tennessee OFF vs Arkansas DEF | 3.2 (109)  |
|            | 3.1 (106) | Tennessee DEF vs Arkansas OFF | 2.66 (125) |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                               |            |
|-----------------------------|-----------|-------------------------------|------------|
| +24.8<br>head-to-head +18.9 | 0.85 (11) | Tennessee OFF vs Arkansas DEF | 0.84 (122) |
|                             | 0.69 (56) | Tennessee DEF vs Arkansas OFF | 0.81 (29)  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                               |            |
|------------|-----------|-------------------------------|------------|
| +9.10      | 0.13 (22) | Tennessee OFF vs Arkansas DEF | 0.15 (112) |
|            | 0.19 (76) | Tennessee DEF vs Arkansas OFF | 0.19 (91)  |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                               |            |
|-----------------------------|-----------|-------------------------------|------------|
| +2.53<br>head-to-head +12.0 | 0.16 (97) | Tennessee OFF vs Arkansas DEF | 0.12 (119) |
|                             | 0.22 (11) | Tennessee DEF vs Arkansas OFF | 0.18 (125) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |            |                               |            |
|-----------------------------|------------|-------------------------------|------------|
| +0.34<br>head-to-head +0.33 | 1.33 (22)  | Tennessee OFF vs Arkansas DEF | 1.12 (101) |
|                             | 1.32 (129) | Tennessee DEF vs Arkansas OFF | 0.79 (133) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                               |            |
|-----------------------------|-----------|-------------------------------|------------|
| +0.43<br>head-to-head +1.18 | 1.68 (28) | Tennessee OFF vs Arkansas DEF | 1.10 (77)  |
|                             | 1.25 (91) | Tennessee DEF vs Arkansas OFF | 0.35 (137) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |            |
|-----------|------|------------|
| 1.35 (11) | F+   | -0.14 (73) |
| 1.17 (16) | OF+  | 0.11 (63)  |
| 1.26 (18) | DF+  | -0.47 (89) |
| 0.88 (11) | FEI  | -0.03 (64) |
| 0.35 (15) | OFEI | 0.05 (53)  |
| 0.47 (15) | DFEI | -0.12 (89) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.89**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.91**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |             |
|-----------|-------------------------|-------------|
| 0.16 (32) | NET SUCCESS RATE        | -0.21 (111) |
| 0.42 (70) | OFF SUCCESS RATE (OSR)  | 0.33 (98)   |
| 0.26 (10) | OPP SUCCESS RATE (DSR)  | 0.55 (113)  |
| 0.45 (57) | OFF SUCCESS RATE (CFBD) | 0.41 (101)  |
| 0.37 (39) | DEF SUCCESS RATE (CFBD) | 0.43 (96)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.38**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.12**

head-to-head +0.38

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.20 (54)  | OFF PPA         | 0.01 (117) |
| -0.09 (15) | DEF PPA ALLOWED | 0.17 (109) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.15**

head-to-head +0.44

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|                  | 80.0 | San Diego State DEF vs Oregon State OFF | 69.5 |                                                                                                                                                 |

POINTS / GAME

|                                                                                                                                                                    |            |                                         |           |                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------------|-----------|------------------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 17.5 (111) | San Diego State OFF vs Oregon State DEF | 25.3 (59) | <div>-21.5</div> |
|                                                                                                                                                                    | 31.0 (98)  | San Diego State DEF vs Oregon State OFF | 33.3 (31) |                  |

YARDS / GAME

|                                                                                                                                                      |             |                                         |            |                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|-----------------------------------------|------------|-------------------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 281.3 (128) | San Diego State OFF vs Oregon State DEF | 368.3 (56) | <div>-304.5</div> |
|                                                                                                                                                      | 460.3 (125) | San Diego State DEF vs Oregon State OFF | 493.8 (6)  |                   |

YARDS / PLAY

|                                                                                                                                                     |           |                                         |          |                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------------------|----------|------------------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 4.3 (126) | San Diego State OFF vs Oregon State DEF | 5.2 (52) | <div>-3.40</div> |
|                                                                                                                                                     | 5.8 (83)  | San Diego State DEF vs Oregon State OFF | 7.1 (5)  |                  |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |                  |
|------------------------------------------------|------------------|
| <div>+10.2</div>                               | <div>+17.4</div> |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                                         |           |                  |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------------|-----------|------------------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 66.7 (123) | San Diego State OFF vs Oregon State DEF | 70.6 (17) | <div>-31.5</div> |
|                                                                                                                                  | 75.0 (24)  | San Diego State DEF vs Oregon State OFF | 93.8 (23) |                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |            |                                         |            |                  |
|-------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------------|------------|------------------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 24.5 (126) | San Diego State OFF vs Oregon State DEF | 44.4 (108) | <div>-13.7</div> |
|                                                                                                                   | 41.4 (88)  | San Diego State DEF vs Oregon State OFF | 41.3 (59)  |                  |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

## PASSING GAME

### PASS YARDS / GAME

|             |                                         |            |                               |
|-------------|-----------------------------------------|------------|-------------------------------|
| 153.5 (123) | San Diego State OFF vs Oregon State DEF | 202.5 (41) | +196.8<br>head-to-head +287.6 |
| 263.3 (113) | San Diego State DEF vs Oregon State OFF | 380.3 (1)  |                               |

### PASS YARDS / ATTEMPT

|           |                                         |          |                             |
|-----------|-----------------------------------------|----------|-----------------------------|
| 5.5 (127) | San Diego State OFF vs Oregon State DEF | 7.2 (61) | +3.36<br>head-to-head +5.50 |
| 9.1 (127) | San Diego State DEF vs Oregon State OFF | 9.1 (13) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

### QBR

|            |                                 |           |
|------------|---------------------------------|-----------|
| 34.3 (134) | San Diego State vs Oregon State | 79.7 (39) |
|------------|---------------------------------|-----------|

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

### OFFENSIVE EFFICIENCY

|            |                                         |           |
|------------|-----------------------------------------|-----------|
| 19.9 (128) | San Diego State OFF vs Oregon State DEF | 63.5 (82) |
| 63.5 (83)  | San Diego State DEF vs Oregon State OFF | 79.2 (12) |

### SACKS ALLOWED / GAME

|                             |           |                                         |           |
|-----------------------------|-----------|-----------------------------------------|-----------|
| -8.62<br>head-to-head +1.90 | 1.80 (60) | San Diego State OFF vs Oregon State DEF | 3.3 (14)  |
|                             | 2.00 (60) | San Diego State DEF vs Oregon State OFF | 1.80 (60) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

### COMPLETION %

|      |                                 |      |
|------|---------------------------------|------|
| 57.1 | San Diego State vs Oregon State | 69.0 |
|------|---------------------------------|------|

### QB RUSH YARDS / GAME

|    |                                 |    |
|----|---------------------------------|----|
| -- | San Diego State vs Oregon State | -- |
|----|---------------------------------|----|

### PASSING EXPLOSIVENESS

|            |                                         |           |                             |
|------------|-----------------------------------------|-----------|-----------------------------|
| 1.13 (118) | San Diego State OFF vs Oregon State DEF | 1.09 (20) | -0.07<br>head-to-head +0.18 |
| 1.07 (17)  | San Diego State DEF vs Oregon State OFF | 1.33 (24) |                             |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

### INTERCEPTIONS / GAME

|      |                                         |      |
|------|-----------------------------------------|------|
| 1.00 | San Diego State OFF vs Oregon State DEF | --   |
| --   | San Diego State DEF vs Oregon State OFF | 0.50 |

## RUSHING GAME

### RUSH YARDS / GAME

|             |                                         |             |                    |
|-------------|-----------------------------------------|-------------|--------------------|
| 127.8 (85)  | San Diego State OFF vs Oregon State DEF | 165.8 (86)  | +7.41              |
| 197.0 (116) | San Diego State DEF vs Oregon State OFF | 113.5 (102) | head-to-head +16.9 |

### RUSH YARDS / ATTEMPT

|          |                                         |          |                    |
|----------|-----------------------------------------|----------|--------------------|
| 3.6 (96) | San Diego State OFF vs Oregon State DEF | 4.2 (66) | +0.04              |
| 4.0 (53) | San Diego State DEF vs Oregon State OFF | 4.4 (54) | head-to-head +0.60 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

### TFL / GAME

|          |                                         |          |
|----------|-----------------------------------------|----------|
| 0.00 (1) | San Diego State OFF vs Oregon State DEF | 4.2 (53) |
| 3.6 (77) | San Diego State DEF vs Oregon State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|                                                                                                                                              |           |                                         |          |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------------------------------------|----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 2.98 (90) | San Diego State OFF vs Oregon State DEF | 3.0 (98) | -0.59 |
|                                                                                                                                              | 3.3 (121) | San Diego State DEF vs Oregon State OFF | 3.3 (33) |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|            |                                         |           |                    |
|------------|-----------------------------------------|-----------|--------------------|
| 0.52 (134) | San Diego State OFF vs Oregon State DEF | 0.77 (99) | +24.5              |
| 0.81 (111) | San Diego State DEF vs Oregon State OFF | 0.88 (4)  | head-to-head +39.6 |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|                                                                                                                                            |            |                                         |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|-----------------------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.21 (119) | San Diego State OFF vs Oregon State DEF | 0.15 (119) | -13.4 |
|                                                                                                                                            | 0.12 (135) | San Diego State DEF vs Oregon State OFF | 0.11 (7)   |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|            |                                         |           |                    |
|------------|-----------------------------------------|-----------|--------------------|
| 0.16 (92)  | San Diego State OFF vs Oregon State DEF | 0.17 (55) | +6.33              |
| 0.13 (117) | San Diego State DEF vs Oregon State OFF | 0.12 (27) | head-to-head +8.20 |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

#### 2ND LEVEL YARDS

|                                    |            |                                         |            |
|------------------------------------|------------|-----------------------------------------|------------|
| <b>-0.14</b><br>head-to-head +0.26 | 1.00 (101) | San Diego State OFF vs Oregon State DEF | 0.96 (65)  |
|                                    | 0.79 (25)  | San Diego State DEF vs Oregon State OFF | 0.91 (118) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

#### OPEN FIELD YARDS

|                                    |            |                                         |           |
|------------------------------------|------------|-----------------------------------------|-----------|
| <b>-0.36</b><br>head-to-head +0.61 | 0.84 (106) | San Diego State OFF vs Oregon State DEF | 1.15 (81) |
|                                    | 0.42 (16)  | San Diego State DEF vs Oregon State OFF | 0.95 (94) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

#### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -0.52 (95)  | F+   | 0.17 (58)  |
| -1.16 (121) | OF+  | 0.47 (47)  |
| 0.13 (61)   | DF+  | -0.06 (71) |
| -0.30 (85)  | FEI  | -0.02 (63) |
| -0.55 (129) | OFEI | 0.10 (47)  |
| 0.20 (41)   | DFEI | -0.05 (80) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

#### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.40**

#### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.28**

|             |                         |           |
|-------------|-------------------------|-----------|
| -0.26 (122) | NET SUCCESS RATE        | 0.15 (37) |
| 0.20 (133)  | OFF SUCCESS RATE (OSR)  | 0.52 (31) |
| 0.46 (84)   | OPP SUCCESS RATE (DSR)  | 0.38 (48) |
| 0.35 (133)  | OFF SUCCESS RATE (CFBD) | 0.48 (32) |
| 0.45 (118)  | DEF SUCCESS RATE (CFBD) | 0.43 (97) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

#### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.41

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.13

head-to-head +0.41

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

-0.09 (134)

OFF PPA

0.30 (19)

0.09 (81)

DEF PPA ALLOWED

0.09 (83)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.17

head-to-head +0.39

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                     |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 80.3 | Louisiana State OFF vs Kentucky DEF | 75.8 | -0.50 |
|                                                                                                                                                 | 63.8 | Louisiana State DEF vs Kentucky OFF | 68.8 |       |

POINTS / GAME

|       |           |                                     |           |                                                                                                                                                                    |
|-------|-----------|-------------------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +21.6 | 38.8 (11) | Louisiana State OFF vs Kentucky DEF | 30.3 (93) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 15.5 (12) | Louisiana State DEF vs Kentucky OFF | 32.0 (41) |                                                                                                                                                                    |

YARDS / GAME

|        |           |                                     |            |                                                                                                                                                      |
|--------|-----------|-------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +275.2 | 502.0 (4) | Louisiana State OFF vs Kentucky DEF | 394.5 (80) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|        | 226.8 (2) | Louisiana State DEF vs Kentucky OFF | 394.5 (51) |                                                                                                                                                      |

YARDS / PLAY

|       |          |                                     |          |                                                                                                                                                     |
|-------|----------|-------------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +2.20 | 6.3 (25) | Louisiana State OFF vs Kentucky DEF | 5.2 (52) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 3.6 (1)  | Louisiana State DEF vs Kentucky OFF | 5.7 (55) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +8.88                                          | +25.2 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                                     |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|-------------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 79.2 (100) | Louisiana State OFF vs Kentucky DEF | 88.9 (89) | -6.94 |
|                                                                                                                                  | 87.5 (75)  | Louisiana State DEF vs Kentucky OFF | 87.5 (61) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                     |            |                                                                                                                   |
|-------|-----------|-------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +43.6 | 51.6 (10) | Louisiana State OFF vs Kentucky DEF | 44.1 (106) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 29.8 (16) | Louisiana State DEF vs Kentucky OFF | 22.2 (131) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                              |            |                                     |            |
|------------------------------|------------|-------------------------------------|------------|
| +78.7<br>head-to-head +134.4 | 296.5 (16) | Louisiana State OFF vs Kentucky DEF | 229.0 (75) |
|                              | 179.3 (24) | Louisiana State DEF vs Kentucky OFF | 211.8 (77) |

| PASS YARDS / ATTEMPT               |          |                                     |          |
|------------------------------------|----------|-------------------------------------|----------|
| <b>+0.16</b><br>head-to-head +1.90 | 9.0 (18) | Louisiana State OFF vs Kentucky DEF | 6.0 (12) |
|                                    | 5.9 (9)  | Louisiana State DEF vs Kentucky OFF | 7.2 (76) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attemp edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                             |            |
|-----------|-----------------------------|------------|
| 82.2 (29) | Louisiana State vs Kentucky | 52.7 (114) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                     |            |  |
|----------------------|-------------------------------------|------------|--|
| 66.0 (36)            | Louisiana State OFF vs Kentucky DEF | 76.0 (109) |  |
| 94.6 (137)           | Louisiana State DEF vs Kentucky OFF | 70.2 (28)  |  |

| SACKS ALLOWED / GAME               |           |                                     |            |
|------------------------------------|-----------|-------------------------------------|------------|
| <b>-6.22</b><br>head-to-head +6.21 | 1.80 (60) | Louisiana State OFF vs Kentucky DEF | 2.00 (60)  |
|                                    | 4.8 (1)   | Louisiana State DEF vs Kentucky OFF | 2.80 (104) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                             |      |
|--------------|-----------------------------|------|
| 62.1         | Louisiana State vs Kentucky | 67.5 |

| QB RUSH YARDS / GAME |                             |    |
|----------------------|-----------------------------|----|
| --                   | Louisiana State vs Kentucky | -- |

| PASSING EXPLOSIVENESS              |           |                                     |            |
|------------------------------------|-----------|-------------------------------------|------------|
| <b>-0.06</b><br>head-to-head +0.04 | 1.24 (69) | Louisiana State OFF vs Kentucky DEF | 1.16 (42)  |
|                                    | 1.22 (67) | Louisiana State DEF vs Kentucky OFF | 1.15 (112) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                     |      |
|----------------------|-------------------------------------|------|
| 1.50                 | Louisiana State OFF vs Kentucky DEF | --   |
| --                   | Louisiana State DEF vs Kentucky OFF | 0.30 |

| RUSHING GAME                        |            |                                     |            |
|-------------------------------------|------------|-------------------------------------|------------|
| RUSH YARDS / GAME                   |            |                                     |            |
| <b>+67.9</b><br>head-to-head +140.7 | 205.5 (21) | Louisiana State OFF vs Kentucky DEF | 165.5 (85) |
|                                     | 47.5 (2)   | Louisiana State DEF vs Kentucky OFF | 182.8 (40) |
| RUSH YARDS / ATTEMPT                |            |                                     |            |
| <b>+0.74</b><br>head-to-head +2.40  | 4.5 (47)   | Louisiana State OFF vs Kentucky DEF | 4.6 (87)   |
|                                     | 1.70 (1)   | Louisiana State DEF vs Kentucky OFF | 5.0 (22)   |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attemp edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                     |          |
|------------|-------------------------------------|----------|
| 0.00 (1)   | Louisiana State OFF vs Kentucky DEF | 3.4 (85) |
| 6.4 (6)    | Louisiana State DEF vs Kentucky OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |          |                                     |           |
|------------|----------|-------------------------------------|-----------|
| +0.65      | 3.2 (54) | Louisiana State OFF vs Kentucky DEF | 2.94 (84) |
|            | 2.09 (5) | Louisiana State DEF vs Kentucky OFF | 3.4 (28)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                                     |           |
|--------------------|-----------|-------------------------------------|-----------|
|                    | 0.73 (80) | Louisiana State OFF vs Kentucky DEF | 0.74 (83) |
|                    | 0.73 (73) | Louisiana State DEF vs Kentucky OFF | 0.75 (60) |

+3.94  
head-to-head +0.84

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                     |            |
|------------|-----------|-------------------------------------|------------|
| +10.3      | 0.14 (35) | Louisiana State OFF vs Kentucky DEF | 0.16 (103) |
|            | 0.25 (13) | Louisiana State DEF vs Kentucky OFF | 0.15 (45)  |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                     |           |
|-----------------------------|-----------|-------------------------------------|-----------|
| -2.87<br>head-to-head +4.20 | 0.15 (90) | Louisiana State OFF vs Kentucky DEF | 0.18 (38) |
|                             | 0.24 (4)  | Louisiana State DEF vs Kentucky OFF | 0.14 (54) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                     |           |
|-----------------------------|-----------|-------------------------------------|-----------|
| +0.07<br>head-to-head +0.13 | 1.23 (41) | Louisiana State OFF vs Kentucky DEF | 0.94 (58) |
|                             | 0.78 (24) | Louisiana State DEF vs Kentucky OFF | 1.26 (35) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                     |           |
|-----------------------------|-----------|-------------------------------------|-----------|
| +0.01<br>head-to-head +0.10 | 1.31 (62) | Louisiana State OFF vs Kentucky DEF | 1.04 (73) |
|                             | 0.76 (42) | Louisiana State DEF vs Kentucky OFF | 1.50 (49) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 1.59 (10) | F+   | 0.70 (39) |
| 1.08 (19) | OF+  | 0.62 (41) |
| 1.94 (5)  | DF+  | 0.68 (35) |
| 0.89 (10) | FEI  | 0.49 (36) |
| 0.24 (27) | OFEI | 0.09 (49) |
| 0.66 (5)  | DFEI | 0.38 (22) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.43**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.40**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |            |
|-----------|-------------------------|------------|
| 0.30 (10) | NET SUCCESS RATE        | 0.06 (52)  |
| 0.55 (23) | OFF SUCCESS RATE (OSR)  | 0.47 (55)  |
| 0.25 (7)  | OPP SUCCESS RATE (DSR)  | 0.41 (66)  |
| 0.50 (15) | OFF SUCCESS RATE (CFBD) | 0.51 (12)  |
| 0.29 (2)  | DEF SUCCESS RATE (CFBD) | 0.43 (103) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.24**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.11**

head-to-head +0.24

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |           |
|-----------|-----------------|-----------|
| 0.28 (26) | OFF PPA         | 0.22 (43) |
| -0.16 (4) | DEF PPA ALLOWED | 0.03 (57) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.10**

head-to-head +0.25

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 37% / Rush 63%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                        |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 67.5 | UAB OFF vs Memphis DEF | 66.0 | -1.20 |
|                                                                                                                                                 | 64.8 | UAB DEF vs Memphis OFF | 67.5 |       |

POINTS / GAME

|                                                                                                                                                                    |           |                        |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------|-----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 21.8 (89) | UAB OFF vs Memphis DEF | 22.8 (47) | -18.2 |
|                                                                                                                                                                    | 25.8 (67) | UAB DEF vs Memphis OFF | 37.0 (14) |       |

YARDS / GAME

|                                                                                                                                                      |             |                        |             |        |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|------------------------|-------------|--------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 325.5 (104) | UAB OFF vs Memphis DEF | 420.3 (100) | -107.0 |
|                                                                                                                                                      | 319.3 (33)  | UAB DEF vs Memphis OFF | 533.5 (1)   |        |

YARDS / PLAY

|                                                                                                                                                     |           |                        |           |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------|-----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 4.8 (109) | UAB OFF vs Memphis DEF | 6.4 (111) | -1.60 |
|                                                                                                                                                     | 4.9 (34)  | UAB DEF vs Memphis OFF | 7.9 (1)   |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +0.51                                          | +10.1 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |             |                        |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|-------------|------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 88.9 (51)   | UAB OFF vs Memphis DEF | 58.3 (2)  | -39.5 |
|                                                                                                                                  | 100.0 (128) | UAB DEF vs Memphis OFF | 86.7 (65) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |           |                        |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 47.5 (25) | UAB OFF vs Memphis DEF | 31.2 (22) | -4.05 |
|                                                                                                                   | 39.6 (71) | UAB DEF vs Memphis OFF | 43.2 (46) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |             |                        |            |       |
|--|-------------|------------------------|------------|-------|
|  | 163.0 (118) | UAB OFF vs Memphis DEF | 228.5 (74) | -38.5 |
|  | 113.0 (1)   | UAB DEF vs Memphis OFF | 295.3 (17) |       |

PASS YARDS / ATTEMPT

head-to-head +16.8

|          |                        |          |                                    |
|----------|------------------------|----------|------------------------------------|
| 6.9 (86) | UAB OFF vs Memphis DEF | 8.2 (98) | <b>+3.86</b><br>head-to-head +3.60 |
| 6.6 (39) | UAB DEF vs Memphis OFF | 12.1 (1) |                                    |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                |          |
|------------|----------------|----------|
| 52.1 (115) | UAB vs Memphis | 93.3 (2) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                        |           |
|----------------------|------------------------|-----------|
| 21.1 (125)           | UAB OFF vs Memphis DEF | 43.0 (33) |
| 47.5 (44)            | UAB DEF vs Memphis OFF | 81.2 (11) |

| SACKS ALLOWED / GAME               |            |                        |           |
|------------------------------------|------------|------------------------|-----------|
| <b>-7.15</b><br>head-to-head +4.04 | 2.80 (104) | UAB OFF vs Memphis DEF | 2.80 (23) |
|                                    | 2.50 (36)  | UAB DEF vs Memphis OFF | 1.50 (42) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                |      |
|--------------|----------------|------|
| 57.5         | UAB vs Memphis | 70.4 |

| QB RUSH YARDS / GAME |                |    |
|----------------------|----------------|----|
| --                   | UAB vs Memphis | -- |

| PASSING EXPLOSIVENESS              |            |                        |            |
|------------------------------------|------------|------------------------|------------|
| <b>+0.10</b><br>head-to-head +0.23 | 1.16 (103) | UAB OFF vs Memphis DEF | 1.41 (125) |
|                                    | 1.03 (10)  | UAB DEF vs Memphis OFF | 1.31 (33)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                        |      |
|----------------------|------------------------|------|
| 1.00                 | UAB OFF vs Memphis DEF | --   |
| --                   | UAB DEF vs Memphis OFF | 0.80 |

## RUSHING GAME

| RUSH YARDS / GAME |                        |             |                                     |
|-------------------|------------------------|-------------|-------------------------------------|
| 162.5 (51)        | UAB OFF vs Memphis DEF | 191.8 (112) | <b>+141.5</b><br>head-to-head +90.3 |
| 206.3 (122)       | UAB DEF vs Memphis OFF | 238.3 (8)   |                                     |

| RUSH YARDS / ATTEMPT |                        |           |                                    |
|----------------------|------------------------|-----------|------------------------------------|
| 3.9 (83)             | UAB OFF vs Memphis DEF | 5.4 (122) | <b>+1.94</b><br>head-to-head +1.00 |
| 4.6 (87)             | UAB DEF vs Memphis OFF | 5.7 (6)   |                                    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                        |          |
|------------|------------------------|----------|
| 0.00 (1)   | UAB OFF vs Memphis DEF | 4.6 (41) |
| 4.4 (46)   | UAB DEF vs Memphis OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS                                                                                                                                   |           |                        |           |       |
|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------|-----------|-------|
| Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. | 3.2 (52)  | UAB OFF vs Memphis DEF | 3.2 (111) | -0.56 |
|                                                                                                                                              | 3.4 (128) | UAB DEF vs Memphis OFF | 3.5 (17)  |       |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                        |            |  |
|-----------------------------|-----------|------------------------|------------|--|
| +13.8<br>head-to-head +5.16 | 0.73 (76) | UAB OFF vs Memphis DEF | 0.84 (124) |  |
|                             | 0.71 (67) | UAB DEF vs Memphis OFF | 0.81 (29)  |  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                        |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.16 (49)  | UAB OFF vs Memphis DEF | 0.14 (125) | -2.09 |
|                                                                                                                                            | 0.14 (130) | UAB DEF vs Memphis OFF | 0.14 (36)  |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                        |           |                             |
|------------|-----------|------------------------|-----------|-----------------------------|
|            | 0.15 (90) | UAB OFF vs Memphis DEF | 0.17 (61) | +3.53<br>head-to-head +5.00 |
|            | 0.16 (67) | UAB DEF vs Memphis OFF | 0.11 (19) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                        |            |                             |
|-----------------|------------|------------------------|------------|-----------------------------|
|                 | 0.99 (106) | UAB OFF vs Memphis DEF | 1.26 (122) | +0.37<br>head-to-head +0.22 |
|                 | 1.16 (109) | UAB DEF vs Memphis OFF | 1.31 (23)  |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                        |            |                             |
|------------------|------------|------------------------|------------|-----------------------------|
|                  | 0.81 (109) | UAB OFF vs Memphis DEF | 2.13 (131) | +0.81<br>head-to-head +0.22 |
|                  | 0.95 (66)  | UAB DEF vs Memphis OFF | 2.21 (11)  |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -0.97 (111) | F+   | 0.30 (55)  |
| -0.89 (109) | OF+  | 0.91 (26)  |
| -0.80 (102) | DF+  | -0.40 (87) |
| -0.68 (112) | FEI  | 0.11 (56)  |
| -0.33 (105) | OFEI | 0.25 (25)  |
| -0.27 (106) | DFEI | -0.14 (90) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.71**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.79**

|            |                         |           |
|------------|-------------------------|-----------|
| 0.03 (63)  | NET SUCCESS RATE        | 0.20 (25) |
| 0.43 (69)  | OFF SUCCESS RATE (OSR)  | 0.56 (22) |
| 0.40 (62)  | OPP SUCCESS RATE (DSR)  | 0.36 (43) |
| 0.44 (70)  | OFF SUCCESS RATE (CFBD) | 0.50 (17) |
| 0.43 (102) | DEF SUCCESS RATE (CFBD) | 0.40 (75) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.17**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.11**

head-to-head +0.17

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.09 (97) | OFF PPA         | 0.28 (27)  |
| 0.02 (55) | DEF PPA ALLOWED | 0.15 (104) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.08**

head-to-head +0.05

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 34% / Rush 66%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN     |            |                        |             |                                                                                                                                                                    |
|---------------|------------|------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAYS / GAME  |            |                        |             |                                                                                                                                                                    |
| +17.5         | 62.3       | Nevada OFF vs UTEP DEF | 63.3        | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.                    |
|               | 79.0       | Nevada DEF vs UTEP OFF | 60.5        |                                                                                                                                                                    |
| POINTS / GAME |            |                        |             |                                                                                                                                                                    |
| +49.8         | 34.0 (26)  | Nevada OFF vs UTEP DEF | 49.3 (138)  | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|               | 25.7 (66)  | Nevada DEF vs UTEP OFF | 7.8 (138)   |                                                                                                                                                                    |
| YARDS / GAME  |            |                        |             |                                                                                                                                                                    |
| +242.1        | 392.3 (53) | Nevada OFF vs UTEP DEF | 443.8 (117) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               |
|               | 384.0 (69) | Nevada DEF vs UTEP OFF | 210.0 (138) |                                                                                                                                                                    |
| YARDS / PLAY  |            |                        |             |                                                                                                                                                                    |
| +4.90         | 6.3 (25)   | Nevada OFF vs UTEP DEF | 7.0 (128)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|               | 4.9 (34)   | Nevada DEF vs UTEP OFF | 3.5 (138)   |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +2.81                                          | +8.16 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE % |            |                        |            |                                                                                                                                  |
|------------|------------|------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +61.7      | 100.0 (1)  | Nevada OFF vs UTEP DEF | 90.9 (99)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 91.7 (105) | Nevada DEF vs UTEP OFF | 37.5 (137) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN % |           |                        |            |                                                                                                                   |
|------------|-----------|------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +40.6      | 39.5 (75) | Nevada OFF vs UTEP DEF | 59.1 (138) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|            | 36.0 (44) | Nevada DEF vs UTEP OFF | 22.0 (134) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME                 |            |                        |             |
|------------------------------|------------|------------------------|-------------|
| PASS YARDS / GAME            |            |                        |             |
| +3.89<br>head-to-head +192.2 | 190.7 (96) | Nevada OFF vs UTEP DEF | 260.0 (104) |
|                              | 156.0 (11) | Nevada DEF vs UTEP OFF | 102.5 (136) |
| PASS YARDS / ATTEMPT         |            |                        |             |

|                    |          |                        |            |
|--------------------|----------|------------------------|------------|
| <b>+3.06</b>       | 7.9 (47) | Nevada OFF vs UTEP DEF | 10.0 (133) |
| head-to-head +6.80 | 5.7 (5)  | Nevada DEF vs UTEP OFF | 5.4 (130)  |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                |            |
|------------|----------------|------------|
| 50.5 (118) | Nevada vs UTEP | 34.0 (135) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                        |            |
|----------------------|------------------------|------------|
| 31.8 (109)           | Nevada OFF vs UTEP DEF | 30.5 (13)  |
| 40.2 (30)            | Nevada DEF vs UTEP OFF | 15.3 (132) |

| SACKS ALLOWED / GAME |                        |            |                    |  |
|----------------------|------------------------|------------|--------------------|--|
| 1.70 (57)            | Nevada OFF vs UTEP DEF | 0.80 (124) | <b>-11.7</b>       |  |
| 1.70 (84)            | Nevada DEF vs UTEP OFF | 5.0 (137)  |                    |  |
|                      |                        |            | head-to-head +8.92 |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                |      |
|--------------|----------------|------|
| 58.3         | Nevada vs UTEP | 60.5 |

| QB RUSH YARDS / GAME |                |    |
|----------------------|----------------|----|
| --                   | Nevada vs UTEP | -- |

| PASSING EXPLOSIVENESS |           |                        |           |  |
|-----------------------|-----------|------------------------|-----------|--|
| <b>+0.07</b>          | 1.29 (39) | Nevada OFF vs UTEP DEF | 1.24 (76) |  |
| head-to-head +0.20    | 1.12 (29) | Nevada DEF vs UTEP OFF | 1.21 (77) |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                        |      |
|----------------------|------------------------|------|
| 0.70                 | Nevada OFF vs UTEP DEF | --   |
| --                   | Nevada DEF vs UTEP OFF | 1.30 |

| RUSHING GAME |  |  |  |  |
|--------------|--|--|--|--|
|--------------|--|--|--|--|

| RUSH YARDS / GAME  |             |                        |             |  |
|--------------------|-------------|------------------------|-------------|--|
| <b>+82.4</b>       | 201.7 (25)  | Nevada OFF vs UTEP DEF | 183.8 (106) |  |
| head-to-head +50.0 | 228.0 (130) | Nevada DEF vs UTEP OFF | 107.5 (107) |  |

| RUSH YARDS / ATTEMPT |          |                        |            |  |
|----------------------|----------|------------------------|------------|--|
| <b>+2.14</b>         | 5.5 (10) | Nevada OFF vs UTEP DEF | 5.0 (110)  |  |
| head-to-head +3.00   | 4.6 (87) | Nevada DEF vs UTEP OFF | 2.90 (121) |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                        |            |
|------------|------------------------|------------|
| 0.00 (1)   | Nevada OFF vs UTEP DEF | 2.60 (102) |
| 3.8 (71)   | Nevada DEF vs UTEP OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |           |                        |            |                                                                                                                                              |
|-------|-----------|------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.44 | 3.2 (49)  | Nevada OFF vs UTEP DEF | 3.0 (94)   | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 3.3 (122) | Nevada DEF vs UTEP OFF | 2.55 (132) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|                             |            |                        |            |
|-----------------------------|------------|------------------------|------------|
| -10.6<br>head-to-head +17.4 | 0.64 (111) | Nevada OFF vs UTEP DEF | 0.69 (59)  |
|                             | 0.62 (27)  | Nevada DEF vs UTEP OFF | 0.53 (133) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|                                                                                                                                            |            |                        |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.20 (104) | Nevada OFF vs UTEP DEF | 0.19 (70)  | -0.34 |
|                                                                                                                                            | 0.15 (121) | Nevada DEF vs UTEP OFF | 0.24 (132) |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                             |            |                        |            |
|-----------------------------|------------|------------------------|------------|
| +5.63<br>head-to-head +9.40 | 0.13 (39)  | Nevada OFF vs UTEP DEF | 0.12 (123) |
|                             | 0.11 (133) | Nevada DEF vs UTEP OFF | 0.23 (137) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                             |           |                        |           |
|-----------------------------|-----------|------------------------|-----------|
| +0.23<br>head-to-head +0.19 | 1.35 (16) | Nevada OFF vs UTEP DEF | 0.98 (74) |
|                             | 1.09 (96) | Nevada DEF vs UTEP OFF | 1.06 (84) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                             |           |                        |           |
|-----------------------------|-----------|------------------------|-----------|
| +0.26<br>head-to-head +0.24 | 1.61 (37) | Nevada OFF vs UTEP DEF | 1.00 (69) |
|                             | 0.64 (30) | Nevada DEF vs UTEP OFF | 1.73 (23) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.71 (103) | F+   | -1.98 (137) |
| -0.84 (107) | OF+  | -1.74 (134) |
| -0.49 (91)  | DF+  | -1.73 (137) |
| -0.59 (107) | FEI  | -1.30 (137) |
| -0.40 (113) | OFEI | -0.67 (136) |
| -0.18 (94)  | DFEI | -0.48 (132) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.57**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.71**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |             |
|-----------|-------------------------|-------------|
| 0.12 (42) | NET SUCCESS RATE        | -0.60 (138) |
| 0.48 (48) | OFF SUCCESS RATE (OSR)  | 0.15 (137)  |
| 0.37 (46) | OPP SUCCESS RATE (DSR)  | 0.75 (138)  |
| 0.41 (99) | OFF SUCCESS RATE (CFBD) | 0.35 (132)  |
| 0.42 (90) | DEF SUCCESS RATE (CFBD) | 0.48 (128)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.72**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.38**

head-to-head +0.72

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |             |
|------------|-----------------|-------------|
| 0.09 (95)  | OFF PPA         | -0.21 (138) |
| 0.15 (102) | DEF PPA ALLOWED | 0.26 (131)  |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.14**

head-to-head +0.41

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI 0.9

NORTH DAKOTA STATE

| YARDS / PLAY                                                                                                                                    |            |                                    |            |                                                                                                                                                                    |
| +1.30                                                                                                                                           | 5.8 (49)   | North Dakota State OFF vs UNLV DEF | 5.4 (65)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|                                                                                                                                                 | 4.3 (11)   | North Dakota State DEF vs UNLV OFF | 5.6 (59)   |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+3.80

+6.26

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE % |           |                                    |            |                                                                                                                                  |
|------------|-----------|------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +57.7      | 91.7 (35) | North Dakota State OFF vs UNLV DEF | 88.2 (85)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 55.6 (1)  | North Dakota State DEF vs UNLV OFF | 66.7 (123) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN % |           |                                    |           |                                                                                                                   |
|------------|-----------|------------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------|
| +7.69      | 41.2 (60) | North Dakota State OFF vs UNLV DEF | 38.7 (61) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|            | 34.0 (34) | North Dakota State DEF vs UNLV OFF | 38.2 (80) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME                |            |                                    |            |  |
|-----------------------------|------------|------------------------------------|------------|--|
| PASS YARDS / GAME           |            |                                    |            |  |
| +0.29<br>head-to-head +94.2 | 197.3 (91) | North Dakota State OFF vs UNLV DEF | 249.8 (95) |  |
|                             | 138.5 (6)  | North Dakota State DEF vs UNLV OFF | 214.4 (73) |  |

| PASS YARDS / ATTEMPT               |          |                                    |          |
|------------------------------------|----------|------------------------------------|----------|
| <b>+0.16</b><br>head-to-head +1.40 | 8.2 (37) | North Dakota State OFF vs UNLV DEF | 6.8 (49) |
|                                    | 6.0 (12) | North Dakota State DEF vs UNLV OFF | 7.6 (58) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attemp edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                            |           |
|-----------|----------------------------|-----------|
| 87.0 (15) | North Dakota State vs UNLV | 76.2 (53) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                    |            |
|----------------------|------------------------------------|------------|
| 39.1 (93)            | North Dakota State OFF vs UNLV DEF | 67.3 (93)  |
| 79.9 (121)           | North Dakota State DEF vs UNLV OFF | 33.3 (102) |

| SACKS ALLOWED / GAME |           |                                    |                                    |
|----------------------|-----------|------------------------------------|------------------------------------|
|                      | 1.00 (15) | North Dakota State OFF vs UNLV DEF | 2.80 (23)                          |
|                      | 1.50 (88) | North Dakota State DEF vs UNLV OFF | 2.80 (104)                         |
|                      |           |                                    | <b>-8.69</b><br>head-to-head +4.70 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                            |      |
|--------------|----------------------------|------|
| 60.4         | North Dakota State vs UNLV | 56.7 |

| QB RUSH YARDS / GAME |                            |    |
|----------------------|----------------------------|----|
| --                   | North Dakota State vs UNLV | -- |

| PASSING EXPLOSIVENESS              |           |                                    |           |
|------------------------------------|-----------|------------------------------------|-----------|
| <b>+0.10</b><br>head-to-head +0.23 | 1.31 (35) | North Dakota State OFF vs UNLV DEF | 1.26 (82) |
|                                    | 1.00 (4)  | North Dakota State DEF vs UNLV OFF | 1.33 (20) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                    |      |
|----------------------|------------------------------------|------|
| 0.50                 | North Dakota State OFF vs UNLV DEF | --   |
| --                   | North Dakota State DEF vs UNLV OFF | 0.40 |

## RUSHING GAME

| RUSH YARDS / GAME                  |            |                                    |            |
|------------------------------------|------------|------------------------------------|------------|
| <b>+13.1</b><br>head-to-head +15.0 | 181.8 (41) | North Dakota State OFF vs UNLV DEF | 134.4 (52) |
|                                    | 123.0 (44) | North Dakota State DEF vs UNLV OFF | 178.2 (46) |

| RUSH YARDS / ATTEMPT               |          |                                    |          |
|------------------------------------|----------|------------------------------------|----------|
| <b>+0.34</b><br>head-to-head +0.70 | 4.5 (47) | North Dakota State OFF vs UNLV DEF | 4.2 (66) |
|                                    | 3.4 (30) | North Dakota State DEF vs UNLV OFF | 4.6 (45) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attemp edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                    |          |
|------------|------------------------------------|----------|
| 0.00 (1)   | North Dakota State OFF vs UNLV DEF | 4.4 (46) |
| 3.0 (92)   | North Dakota State DEF vs UNLV OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                    |           |
|------------|-----------|------------------------------------|-----------|
| +0.61      | 2.98 (89) | North Dakota State OFF vs UNLV DEF | 3.5 (134) |
|            | 2.72 (51) | North Dakota State DEF vs UNLV OFF | 3.1 (68)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                                    |            |
|-----------------------------|-----------|------------------------------------|------------|
| -2.12<br>head-to-head +2.41 | 0.75 (60) | North Dakota State OFF vs UNLV DEF | 0.67 (36)  |
|                             | 0.71 (64) | North Dakota State DEF vs UNLV OFF | 0.68 (101) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                                    |            |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------------------|------------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.19 (96) | North Dakota State OFF vs UNLV DEF | 0.15 (117) |
|                                                                                                                                            | 0.17 (96) | North Dakota State DEF vs UNLV OFF | 0.14 (37)  |

-2.62

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                    |           |
|-----------------------------|-----------|------------------------------------|-----------|
| +1.33<br>head-to-head +3.90 | 0.13 (41) | North Dakota State OFF vs UNLV DEF | 0.16 (65) |
|                             | 0.17 (49) | North Dakota State DEF vs UNLV OFF | 0.16 (95) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                    |            |
|-----------------------------|-----------|------------------------------------|------------|
| +0.27<br>head-to-head +0.49 | 1.08 (75) | North Dakota State OFF vs UNLV DEF | 1.29 (126) |
|                             | 0.81 (28) | North Dakota State DEF vs UNLV OFF | 1.08 (78)  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |           |                                    |           |
|------------------|-----------|------------------------------------|-----------|
|                  | 0.91 (97) | North Dakota State OFF vs UNLV DEF | 1.07 (75) |
|                  | 0.41 (14) | North Dakota State DEF vs UNLV OFF | 1.66 (33) |

-0.28  
head-to-head +0.08

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| 0.14 (60)   | F+   | -0.27 (80) |
| -0.22 (82)  | OF+  | -0.24 (83) |
| 0.32 (50)   | DF+  | -0.20 (83) |
| -0.33 (90)  | FEI  | -0.25 (82) |
| -0.33 (105) | OFEI | -0.21 (86) |
| -0.10 (86)  | DFEI | 0.00 (68)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.22

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.08

|           |                         |            |
|-----------|-------------------------|------------|
| 0.32 (9)  | NET SUCCESS RATE        | -0.04 (85) |
| 0.54 (26) | OFF SUCCESS RATE (OSR)  | 0.35 (94)  |
| 0.22 (5)  | OPP SUCCESS RATE (DSR)  | 0.39 (57)  |
| 0.42 (85) | OFF SUCCESS RATE (CFBD) | 0.36 (127) |
| 0.37 (48) | DEF SUCCESS RATE (CFBD) | 0.39 (58)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

+0.36

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.08

head-to-head +0.36

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.17 (66) | OFF PPA         | 0.07 (106) |
| -0.18 (2) | DEF PPA ALLOWED | 0.04 (63)  |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

-0.00

head-to-head +0.32

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Coastal Carolina OFF vs Marshall DEF

479.5 (130)

Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.

425.0 (105)

Coastal Carolina DEF vs Marshall OFF

341.3 (90)

YARDS / PLAY

+0.90

5.3 (73)

Coastal Carolina OFF vs Marshall DEF

7.0 (128)

Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.

6.4 (111)

Coastal Carolina DEF vs Marshall OFF

5.0 (92)

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

--

-3.83

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.

50.0 (136)

Coastal Carolina OFF vs Marshall DEF

81.2 (47)

-28.4

75.0 (24)

Coastal Carolina DEF vs Marshall OFF

84.6 (71)

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.

32.6 (108)

Coastal Carolina OFF vs Marshall DEF

41.2 (83)

-6.22

42.3 (95)

Coastal Carolina DEF vs Marshall OFF

37.7 (82)

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

| PASS YARDS / ATTEMPT               |           |                                      |           |
|------------------------------------|-----------|--------------------------------------|-----------|
| <b>+1.76</b><br>head-to-head +1.00 | 8.1 (39)  | Coastal Carolina OFF vs Marshall DEF | 8.5 (111) |
|                                    | 9.4 (129) | Coastal Carolina DEF vs Marshall OFF | 6.2 (110) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                              |            |
|-----------|------------------------------|------------|
| 63.0 (80) | Coastal Carolina vs Marshall | 47.2 (123) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                      |            |
|----------------------|--------------------------------------|------------|
| 27.4 (116)           | Coastal Carolina OFF vs Marshall DEF | 21.6 (3)   |
| 38.4 (25)            | Coastal Carolina DEF vs Marshall OFF | 33.0 (105) |

| SACKS ALLOWED / GAME               |           |                                      |            |
|------------------------------------|-----------|--------------------------------------|------------|
| <b>-13.7</b><br>head-to-head +4.04 | 4.0 (134) | Coastal Carolina OFF vs Marshall DEF | 0.50 (131) |
|                                    | 1.50 (88) | Coastal Carolina DEF vs Marshall OFF | 1.00 (15)  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                              |      |
|--------------|------------------------------|------|
| 55.7         | Coastal Carolina vs Marshall | 62.5 |

| QB RUSH YARDS / GAME |                              |    |
|----------------------|------------------------------|----|
| --                   | Coastal Carolina vs Marshall | -- |

| PASSING EXPLOSIVENESS              |           |                                      |           |
|------------------------------------|-----------|--------------------------------------|-----------|
| <b>+0.15</b><br>head-to-head +0.42 | 1.31 (32) | Coastal Carolina OFF vs Marshall DEF | 1.30 (97) |
|                                    | 1.01 (5)  | Coastal Carolina DEF vs Marshall OFF | 1.18 (95) |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                      |      |
|----------------------|--------------------------------------|------|
| 0.50                 | Coastal Carolina OFF vs Marshall DEF | --   |
| --                   | Coastal Carolina DEF vs Marshall OFF | 0.80 |

## RUSHING GAME

| RUSH YARDS / GAME |                                      |             |                                    |
|-------------------|--------------------------------------|-------------|------------------------------------|
| 102.0 (111)       | Coastal Carolina OFF vs Marshall DEF | 192.0 (113) | <b>+41.5</b><br>head-to-head +50.6 |
| 200.8 (118)       | Coastal Carolina DEF vs Marshall OFF | 143.8 (74)  |                                    |

| RUSH YARDS / ATTEMPT |                                      |           |                                    |
|----------------------|--------------------------------------|-----------|------------------------------------|
| 3.2 (115)            | Coastal Carolina OFF vs Marshall DEF | 5.6 (126) | <b>+0.64</b><br>head-to-head +0.20 |
| 4.9 (107)            | Coastal Carolina DEF vs Marshall OFF | 4.1 (75)  |                                    |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                      |            |
|------------|--------------------------------------|------------|
| 0.00 (1)   | Coastal Carolina OFF vs Marshall DEF | 1.80 (113) |
| 3.4 (85)   | Coastal Carolina DEF vs Marshall OFF | 0.00 (1)   |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                      |           |
|------------|-----------|--------------------------------------|-----------|
| +0.72      | 3.5 (16)  | Coastal Carolina OFF vs Marshall DEF | 3.4 (131) |
|            | 3.1 (104) | Coastal Carolina DEF vs Marshall OFF | 3.1 (67)  |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |            |                                      |            |
|-----------------------------|------------|--------------------------------------|------------|
| -0.11<br>head-to-head +0.09 | 0.70 (95)  | Coastal Carolina OFF vs Marshall DEF | 0.74 (80)  |
|                             | 0.77 (100) | Coastal Carolina DEF vs Marshall OFF | 0.67 (102) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |            |                                      |            |
|------------|------------|--------------------------------------|------------|
| +6.19      | 0.15 (41)  | Coastal Carolina OFF vs Marshall DEF | 0.13 (131) |
|            | 0.15 (116) | Coastal Carolina DEF vs Marshall OFF | 0.19 (98)  |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |            |                                      |            |
|-----------------------------|------------|--------------------------------------|------------|
| +0.83<br>head-to-head +0.40 | 0.18 (126) | Coastal Carolina OFF vs Marshall DEF | 0.11 (132) |
|                             | 0.14 (91)  | Coastal Carolina DEF vs Marshall OFF | 0.16 (100) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                      |           |
|-----------------------------|-----------|--------------------------------------|-----------|
| +0.36<br>head-to-head +0.42 | 1.38 (12) | Coastal Carolina OFF vs Marshall DEF | 1.08 (95) |
|                             | 0.90 (41) | Coastal Carolina DEF vs Marshall OFF | 1.14 (61) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |            |                                      |            |
|-----------------------------|------------|--------------------------------------|------------|
| +0.54<br>head-to-head +0.58 | 0.96 (93)  | Coastal Carolina OFF vs Marshall DEF | 1.94 (128) |
|                             | 1.51 (113) | Coastal Carolina DEF vs Marshall OFF | 0.81 (110) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.98 (112) | F+   | -1.01 (113) |
| -0.82 (105) | OF+  | -0.52 (94)  |
| -1.03 (120) | DF+  | -1.43 (130) |
| -0.68 (112) | FEI  | -0.56 (105) |
| -0.44 (117) | OFEI | -0.30 (100) |
| -0.24 (98)  | DFEI | -0.27 (106) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.11

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.12

|             |                         |             |
|-------------|-------------------------|-------------|
| -0.22 (112) | NET SUCCESS RATE        | -0.25 (117) |
| 0.27 (120)  | OFF SUCCESS RATE (OSR)  | 0.34 (97)   |
| 0.49 (96)   | OPP SUCCESS RATE (DSR)  | 0.59 (124)  |
| 0.41 (100)  | OFF SUCCESS RATE (CFBD) | 0.43 (76)   |
| 0.45 (116)  | DEF SUCCESS RATE (CFBD) | 0.49 (132)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

+0.03

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.01

head-to-head +0.03

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.14 (73) | OFF PPA         | 0.13 (77)  |
| 0.12 (93) | DEF PPA ALLOWED | 0.36 (138) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.28

head-to-head +0.24

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

| YARDS / PLAY                                                                                                                                         |            |                            |            |                                                                                                                                                                    |
| +0.60                                                                                                                                                | 7.0 (7)    | Georgia OFF vs Alabama DEF | 4.8 (31)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|                                                                                                                                                      | 4.2 (10)   | Georgia DEF vs Alabama OFF | 7.0 (7)    |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| -0.23                                          | +0.19 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

| RED ZONE %                                                                                                                       |           |                            |            |       |
|----------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------|------------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 90.0 (45) | Georgia OFF vs Alabama DEF | 92.9 (114) | -7.14 |
|                                                                                                                                  | 90.0 (94) | Georgia DEF vs Alabama OFF | 100.0 (1)  |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |           |                            |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|----------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 53.3 (4)  | Georgia OFF vs Alabama DEF | 27.5 (12) | -1.58 |
|                                                                                                                   | 33.3 (28) | Georgia DEF vs Alabama OFF | 49.1 (19) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME         |            |                            |            |                    |
|----------------------|------------|----------------------------|------------|--------------------|
| PASS YARDS / GAME    |            |                            |            |                    |
|                      | 235.3 (59) | Georgia OFF vs Alabama DEF | 234.0 (80) | +49.9              |
|                      | 209.3 (52) | Georgia DEF vs Alabama OFF | 287.4 (21) | head-to-head +27.4 |
| PASS YARDS / ATTEMPT |            |                            |            |                    |

|          |                            |          |                    |
|----------|----------------------------|----------|--------------------|
| 9.0 (18) | Georgia OFF vs Alabama DEF | 7.6 (76) | +1.86              |
| 6.1 (17) | Georgia DEF vs Alabama OFF | 10.6 (3) | head-to-head +0.10 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR      |                    |          |
|----------|--------------------|----------|
| 91.4 (7) | Georgia vs Alabama | 92.0 (6) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                            |            |
|----------------------|----------------------------|------------|
| 90.6 (1)             | Georgia OFF vs Alabama DEF | 88.8 (134) |
| 83.7 (128)           | Georgia DEF vs Alabama OFF | 90.4 (2)   |

| SACKS ALLOWED / GAME |                            |           |                    |
|----------------------|----------------------------|-----------|--------------------|
| 1.30 (30)            | Georgia OFF vs Alabama DEF | 3.2 (19)  | -5.38              |
| 2.50 (36)            | Georgia DEF vs Alabama OFF | 2.40 (97) | head-to-head +5.58 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                    |      |
|--------------|--------------------|------|
| 69.5         | Georgia vs Alabama | 71.3 |

| QB RUSH YARDS / GAME |                    |    |
|----------------------|--------------------|----|
| --                   | Georgia vs Alabama | -- |

| PASSING EXPLOSIVENESS |           |                            |            |
|-----------------------|-----------|----------------------------|------------|
| +0.17                 | 1.27 (54) | Georgia OFF vs Alabama DEF | 1.37 (116) |
| head-to-head +0.14    | 1.19 (53) | Georgia DEF vs Alabama OFF | 1.31 (34)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                            |      |
|----------------------|----------------------------|------|
| 0.30                 | Georgia OFF vs Alabama DEF | --   |
| --                   | Georgia DEF vs Alabama OFF | 0.40 |

## RUSHING GAME

| RUSH YARDS / GAME  |            |                            |            |
|--------------------|------------|----------------------------|------------|
| -26.2              | 198.3 (27) | Georgia OFF vs Alabama DEF | 78.6 (9)   |
| head-to-head +21.2 | 69.3 (5)   | Georgia DEF vs Alabama OFF | 186.4 (37) |

| RUSH YARDS / ATTEMPT |          |                            |          |
|----------------------|----------|----------------------------|----------|
| -0.06                | 5.8 (4)  | Georgia OFF vs Alabama DEF | 2.50 (8) |
| head-to-head +1.10   | 2.30 (5) | Georgia DEF vs Alabama OFF | 4.9 (28) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                            |          |
|------------|----------------------------|----------|
| 0.00 (1)   | Georgia OFF vs Alabama DEF | 5.0 (32) |
| 5.4 (22)   | Georgia DEF vs Alabama OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |          |                            |          |                                                                                                                                              |
|-------|----------|----------------------------|----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.28 | 3.6 (12) | Georgia OFF vs Alabama DEF | 2.03 (3) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 2.19 (8) | Georgia DEF vs Alabama OFF | 3.2 (57) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |           |                            |           |                             |
|--|-----------|----------------------------|-----------|-----------------------------|
|  | 0.83 (16) | Georgia OFF vs Alabama DEF | 0.57 (13) | -3.30<br>head-to-head +0.01 |
|  | 0.62 (26) | Georgia DEF vs Alabama OFF | 0.79 (40) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|       |           |                            |           |                                                                                                                                            |
|-------|-----------|----------------------------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +1.12 | 0.12 (12) | Georgia OFF vs Alabama DEF | 0.26 (9)  | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|       | 0.21 (50) | Georgia DEF vs Alabama OFF | 0.18 (83) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                             |           |                            |           |
|-----------------------------|-----------|----------------------------|-----------|
| +0.33<br>head-to-head +3.20 | 0.10 (15) | Georgia OFF vs Alabama DEF | 0.20 (22) |
|                             | 0.19 (27) | Georgia DEF vs Alabama OFF | 0.15 (75) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                             |           |                            |           |
|-----------------------------|-----------|----------------------------|-----------|
| -0.06<br>head-to-head +0.28 | 1.33 (21) | Georgia OFF vs Alabama DEF | 0.72 (16) |
|                             | 0.52 (2)  | Georgia DEF vs Alabama OFF | 1.25 (38) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                             |           |                            |           |
|-----------------------------|-----------|----------------------------|-----------|
| +0.77<br>head-to-head +0.93 | 2.39 (6)  | Georgia OFF vs Alabama DEF | 0.73 (36) |
|                             | 0.73 (37) | Georgia DEF vs Alabama OFF | 1.45 (51) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|          |      |          |
|----------|------|----------|
| 2.33 (1) | F+   | 2.01 (4) |
| 2.08 (3) | OF+  | 2.10 (2) |
| 2.14 (1) | DF+  | 1.61 (9) |
| 1.50 (1) | FEI  | 1.33 (4) |
| 0.67 (4) | OFEI | 0.67 (4) |
| 0.74 (2) | DFEI | 0.63 (7) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.11**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.17**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.46 (2)  | NET SUCCESS RATE        | 0.33 (8)  |
| 0.64 (7)  | OFF SUCCESS RATE (OSR)  | 0.65 (6)  |
| 0.17 (1)  | OPP SUCCESS RATE (DSR)  | 0.32 (33) |
| 0.54 (3)  | OFF SUCCESS RATE (CFBD) | 0.51 (12) |
| 0.33 (13) | DEF SUCCESS RATE (CFBD) | 0.34 (20) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.13**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.10**

head-to-head +0.13

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.44 (2)   | OFF PPA         | 0.35 (6)  |
| -0.10 (13) | DEF PPA ALLOWED | -0.11 (9) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.11**

head-to-head +0.07

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI 14.2

|                                                                                                                                                                    | 5.8 (83)   | USC DEF vs Penn State OFF | 6.0 (43)   |                                                                                                                                                      |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| --                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | -0.22 |
| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE % |           |                           |            |                                                                                                                                  |
|------------|-----------|---------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +9.92      | 81.2 (91) | USC OFF vs Penn State DEF | 92.3 (108) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 81.8 (52) | USC DEF vs Penn State OFF | 81.8 (86)  |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN % |           |                           |           |                                                                                                                   |
|------------|-----------|---------------------------|-----------|-------------------------------------------------------------------------------------------------------------------|
| +0.55      | 52.1 (7)  | USC OFF vs Penn State DEF | 22.7 (1)  | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|            | 34.9 (40) | USC DEF vs Penn State OFF | 39.4 (77) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |            |                           |            |                    |
|-------------------|------------|---------------------------|------------|--------------------|
| PASS YARDS / GAME |            |                           |            |                    |
|                   | 311.7 (8)  | USC OFF vs Penn State DEF | 119.6 (2)  | +27.5              |
|                   | 230.7 (77) | USC DEF vs Penn State OFF | 243.6 (50) | head-to-head +43.0 |

| PASS YARDS / ATTEMPT |          |                           |          |                    |
|----------------------|----------|---------------------------|----------|--------------------|
|                      | 9.1 (13) | USC OFF vs Penn State DEF | 4.7 (1)  | +1.46              |
|                      | 8.2 (98) | USC DEF vs Penn State OFF | 8.1 (39) | head-to-head +2.50 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                   |           |
|-----------|-------------------|-----------|
| 86.6 (18) | USC vs Penn State | 62.0 (87) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                           |            |
|----------------------|---------------------------|------------|
| 81.9 (9)             | USC OFF vs Penn State DEF | 82.5 (126) |
| 44.1 (37)            | USC DEF vs Penn State OFF | 56.6 (56)  |

| SACKS ALLOWED / GAME |           |                           |           |                    |
|----------------------|-----------|---------------------------|-----------|--------------------|
|                      | 1.00 (15) | USC OFF vs Penn State DEF | 1.40 (98) | -7.15              |
|                      | 2.20 (59) | USC DEF vs Penn State OFF | 1.20 (29) | head-to-head +2.97 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                   |      |
|--------------|-------------------|------|
| 69.4         | USC vs Penn State | 62.7 |

| QB RUSH YARDS / GAME |                   |    |
|----------------------|-------------------|----|
| --                   | USC vs Penn State | -- |

| PASSING EXPLOSIVENESS |            |                           |           |                    |
|-----------------------|------------|---------------------------|-----------|--------------------|
|                       | 1.19 (94)  | USC OFF vs Penn State DEF | 1.18 (48) | +0.12              |
|                       | 1.34 (111) | USC DEF vs Penn State OFF | 1.24 (70) | head-to-head +0.22 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                           |      |
|----------------------|---------------------------|------|
| 0.70                 | USC OFF vs Penn State DEF | --   |
| --                   | USC DEF vs Penn State OFF | 0.60 |

| RUSHING GAME         |            |                           |            |  |
|----------------------|------------|---------------------------|------------|--|
| RUSH YARDS / GAME    |            |                           |            |  |
| +26.3                | 156.2 (61) | USC OFF vs Penn State DEF | 173.2 (96) |  |
| head-to-head +54.8   | 118.2 (34) | USC DEF vs Penn State OFF | 156.4 (60) |  |
| RUSH YARDS / ATTEMPT |            |                           |            |  |
| +0.74                | 4.3 (62)   | USC OFF vs Penn State DEF | 4.8 (103)  |  |
| head-to-head +0.80   | 3.9 (48)   | USC DEF vs Penn State OFF | 4.4 (54)   |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                           |          |
|------------|---------------------------|----------|
| 0.00 (1)   | USC OFF vs Penn State DEF | 3.8 (71) |
| 4.0 (63)   | USC DEF vs Penn State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                           |            |
|------------|-----------|---------------------------|------------|
| +0.47      | 3.1 (63)  | USC OFF vs Penn State DEF | 2.87 (72)  |
|            | 2.78 (61) | USC DEF vs Penn State OFF | 2.77 (114) |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |            |                           |           |
|--------------------|------------|---------------------------|-----------|
|                    | 0.78 (46)  | USC OFF vs Penn State DEF | 0.67 (36) |
|                    | 0.77 (105) | USC DEF vs Penn State OFF | 0.76 (58) |

+9.48  
head-to-head +8.23

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |           |                           |           |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------|---------------------------|-----------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.18 (78) | USC OFF vs Penn State DEF | 0.22 (39) |
|                                                                                                                                            | 0.17 (98) | USC DEF vs Penn State OFF | 0.15 (47) |

-7.38

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                           |           |
|------------|------------|---------------------------|-----------|
|            | 0.09 (9)   | USC OFF vs Penn State DEF | 0.18 (38) |
|            | 0.12 (123) | USC DEF vs Penn State OFF | 0.14 (52) |

+5.03  
head-to-head +1.70

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                           |            |
|-----------------------------|-----------|---------------------------|------------|
| +0.14<br>head-to-head +0.36 | 1.14 (62) | USC OFF vs Penn State DEF | 1.10 (97)  |
|                             | 0.93 (52) | USC DEF vs Penn State OFF | 0.94 (112) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |            |                           |            |
|-----------------------------|------------|---------------------------|------------|
| -0.11<br>head-to-head +0.17 | 0.70 (117) | USC OFF vs Penn State DEF | 1.54 (115) |
|                             | 1.22 (88)  | USC DEF vs Penn State OFF | 0.85 (104) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 1.21 (14) | F+   | 1.03 (17) |
| 1.95 (6)  | OF+  | 0.68 (37) |
| 0.14 (59) | DF+  | 1.15 (19) |
| 0.85 (12) | FEI  | 0.77 (13) |
| 0.75 (1)  | OFEI | 0.25 (25) |
| 0.01 (65) | DFEI | 0.45 (17) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.06**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.08**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 = razor-thin wash, less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.23 (20) | NET SUCCESS RATE        | 0.20 (24) |
| 0.62 (9)  | OFF SUCCESS RATE (OSR)  | 0.50 (38) |
| 0.39 (59) | OPP SUCCESS RATE (DSR)  | 0.30 (23) |
| 0.52 (8)  | OFF SUCCESS RATE (CFBD) | 0.42 (87) |
| 0.41 (85) | DEF SUCCESS RATE (CFBD) | 0.37 (44) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.03**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.07**

head-to-head +0.03

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.29 (24)  | OFF PPA         | 0.18 (60)  |
| 0.16 (108) | DEF PPA ALLOWED | -0.02 (37) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.13**

head-to-head +0.08

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

3-2

Pass 50% / Rush 50%

Pass 41% / Rush 59%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|       |      |                              |      |                                                                                                                                                 |
|-------|------|------------------------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| +8.70 | 83.3 | Syracuse OFF vs Virginia DEF | 62.8 | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. |
|       | 66.7 | Syracuse DEF vs Virginia OFF | 78.5 |                                                                                                                                                 |

POINTS / GAME

|                                                                                                                                                                    |           |                              |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------------|-----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 24.3 (76) | Syracuse OFF vs Virginia DEF | 21.8 (45) | -11.1 |
|                                                                                                                                                                    | 29.7 (89) | Syracuse DEF vs Virginia OFF | 27.5 (63) |       |

YARDS / GAME

|                                                                                                                                                      |            |                              |            |       |
|------------------------------------------------------------------------------------------------------------------------------------------------------|------------|------------------------------|------------|-------|
| Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. | 431.0 (33) | Syracuse OFF vs Virginia DEF | 307.3 (27) | -15.7 |
|                                                                                                                                                      | 372.0 (59) | Syracuse DEF vs Virginia OFF | 382.0 (58) |       |

YARDS / PLAY

|                                                                                                                                                     |          |                              |           |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|------------------------------|-----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 5.2 (77) | Syracuse OFF vs Virginia DEF | 4.9 (34)  | -0.40 |
|                                                                                                                                                     | 5.6 (70) | Syracuse DEF vs Virginia OFF | 4.9 (102) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +1.78                                          | +0.90 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |            |                              |            |                                                                                                                                  |
|-------|------------|------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +14.0 | 71.4 (117) | Syracuse OFF vs Virginia DEF | 90.9 (99)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 76.9 (36)  | Syracuse DEF vs Virginia OFF | 71.4 (117) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                              |            |                                                                                                                   |
|-------|-----------|------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +21.8 | 46.9 (28) | Syracuse OFF vs Virginia DEF | 38.9 (64)  | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 32.4 (26) | Syracuse DEF vs Virginia OFF | 31.7 (110) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |            |                              |            |                             |
|--|------------|------------------------------|------------|-----------------------------|
|  | 288.7 (19) | Syracuse OFF vs Virginia DEF | 134.0 (5)  | +0.19<br>head-to-head +24.3 |
|  | 207.7 (46) | Syracuse DEF vs Virginia OFF | 239.3 (55) |                             |

PASS YARDS / ATTEMPT

|          |                              |          |                    |
|----------|------------------------------|----------|--------------------|
| 7.2 (76) | Syracuse OFF vs Virginia DEF | 6.0 (12) | -0.44              |
| 6.4 (32) | Syracuse DEF vs Virginia OFF | 8.0 (43) | head-to-head +1.20 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                      |           |
|------------|----------------------|-----------|
| 44.7 (126) | Syracuse vs Virginia | 79.4 (44) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                              |            |
|----------------------|------------------------------|------------|
| 52.9 (60)            | Syracuse OFF vs Virginia DEF | 76.2 (111) |
| 58.5 (73)            | Syracuse DEF vs Virginia OFF | 49.0 (72)  |

| SACKS ALLOWED / GAME |                              |           |                    |
|----------------------|------------------------------|-----------|--------------------|
| 2.30 (87)            | Syracuse OFF vs Virginia DEF | 2.50 (36) | -8.75              |
| 2.00 (60)            | Syracuse DEF vs Virginia OFF | 4.8 (136) | head-to-head +1.27 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                      |      |
|--------------|----------------------|------|
| 60.3         | Syracuse vs Virginia | 64.2 |

| QB RUSH YARDS / GAME |                      |    |
|----------------------|----------------------|----|
| --                   | Syracuse vs Virginia | -- |

| PASSING EXPLOSIVENESS |                              |           |                    |
|-----------------------|------------------------------|-----------|--------------------|
| 1.31 (36)             | Syracuse OFF vs Virginia DEF | 1.01 (6)  | -0.10              |
| 1.19 (54)             | Syracuse DEF vs Virginia OFF | 1.17 (97) | head-to-head +0.04 |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                              |      |
|----------------------|------------------------------|------|
| 2.30                 | Syracuse OFF vs Virginia DEF | --   |
| --                   | Syracuse DEF vs Virginia OFF | 0.00 |

## RUSHING GAME

| RUSH YARDS / GAME  |            |                              |            |
|--------------------|------------|------------------------------|------------|
| +12.5              | 142.3 (76) | Syracuse OFF vs Virginia DEF | 173.3 (97) |
| head-to-head +8.50 | 164.3 (82) | Syracuse DEF vs Virginia OFF | 142.8 (75) |

| RUSH YARDS / ATTEMPT |                              |           |                    |
|----------------------|------------------------------|-----------|--------------------|
| 3.5 (99)             | Syracuse OFF vs Virginia DEF | 4.6 (87)  | +0.04              |
| 5.1 (113)            | Syracuse DEF vs Virginia OFF | 3.3 (107) | head-to-head +0.30 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                              |          |
|------------|------------------------------|----------|
| 0.00 (1)   | Syracuse OFF vs Virginia DEF | 4.0 (63) |
| 5.2 (25)   | Syracuse DEF vs Virginia OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |           |                              |           |                                                                                                                                              |
|-------|-----------|------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.19 | 2.96 (92) | Syracuse OFF vs Virginia DEF | 3.2 (113) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 2.68 (46) | Syracuse DEF vs Virginia OFF | 3.3 (42)  |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |            |                              |           |                             |
|--|------------|------------------------------|-----------|-----------------------------|
|  | 0.81 (23)  | Syracuse OFF vs Virginia DEF | 0.71 (67) | +14.6<br>head-to-head +5.49 |
|  | 0.77 (100) | Syracuse DEF vs Virginia OFF | 0.81 (23) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|       |           |                              |            |                                                                                                                                            |
|-------|-----------|------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +2.99 | 0.18 (80) | Syracuse OFF vs Virginia DEF | 0.16 (102) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|       | 0.23 (30) | Syracuse DEF vs Virginia OFF | 0.15 (44)  |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                             |           |                              |           |
|-----------------------------|-----------|------------------------------|-----------|
| -0.07<br>head-to-head +0.90 | 0.13 (35) | Syracuse OFF vs Virginia DEF | 0.18 (36) |
|                             | 0.18 (29) | Syracuse DEF vs Virginia OFF | 0.13 (42) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|  |            |                              |           |                             |
|--|------------|------------------------------|-----------|-----------------------------|
|  | 1.06 (81)  | Syracuse OFF vs Virginia DEF | 1.00 (77) | +0.16<br>head-to-head +0.20 |
|  | 1.18 (113) | Syracuse DEF vs Virginia OFF | 1.08 (75) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|  |            |                              |            |                             |
|--|------------|------------------------------|------------|-----------------------------|
|  | 1.06 (84)  | Syracuse OFF vs Virginia DEF | 0.94 (64)  | +0.23<br>head-to-head +0.58 |
|  | 1.74 (123) | Syracuse DEF vs Virginia OFF | 0.84 (108) |                             |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |            |
|------------|------|------------|
| -0.25 (79) | F+   | 0.48 (49)  |
| -0.34 (87) | OF+  | 0.23 (56)  |
| -0.03 (70) | DF+  | 0.72 (33)  |
| -0.32 (88) | FEI  | 0.22 (50)  |
| -0.22 (88) | OFEI | -0.03 (63) |
| -0.04 (78) | DFEI | 0.27 (30)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.50

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.54

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.05 (57) | NET SUCCESS RATE        | 0.10 (45) |
| 0.48 (47) | OFF SUCCESS RATE (OSR)  | 0.41 (73) |
| 0.44 (73) | OPP SUCCESS RATE (DSR)  | 0.31 (30) |
| 0.43 (81) | OFF SUCCESS RATE (CFBD) | 0.44 (72) |
| 0.38 (57) | DEF SUCCESS RATE (CFBD) | 0.37 (43) |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

-0.06

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.00

head-to-head +0.06

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.08 (102) | OFF PPA         | 0.17 (63)  |
| -0.05 (30) | DEF PPA ALLOWED | -0.04 (32) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

-0.10

head-to-head +0.08

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

297.7 (117)

YARDS / PLAY

+1.30

5.0 (92)

Air Force OFF vs N Illinois DEF

6.4 (111)

Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.

5.8 (83)

Air Force DEF vs N Illinois OFF

4.3 (126)

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+3.68

+6.81

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

+43.3

91.7 (35)

Air Force OFF vs N Illinois DEF

75.0 (24)

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.

90.0 (94)

Air Force DEF vs N Illinois OFF

33.3 (138)

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+49.2

46.0 (34)

Air Force OFF vs N Illinois DEF

56.8 (137)

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.

|                                    |           |                                 |           |
|------------------------------------|-----------|---------------------------------|-----------|
| <b>+1.76</b><br>head-to-head +2.00 | 8.8 (23)  | Air Force OFF vs N Illinois DEF | 7.8 (82)  |
|                                    | 8.3 (103) | Air Force DEF vs N Illinois OFF | 6.3 (107) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                         |            |
|-----------|-------------------------|------------|
| 71.0 (58) | Air Force vs N Illinois | 53.3 (112) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                 |            |
|----------------------|---------------------------------|------------|
| 41.4 (82)            | Air Force OFF vs N Illinois DEF | 45.7 (41)  |
| 47.6 (46)            | Air Force DEF vs N Illinois OFF | 21.5 (124) |

| SACKS ALLOWED / GAME |                                 |            |                                    |
|----------------------|---------------------------------|------------|------------------------------------|
| 0.70 (8)             | Air Force OFF vs N Illinois DEF | 1.30 (100) | <b>-5.20</b><br>head-to-head +9.88 |
| 1.70 (84)            | Air Force DEF vs N Illinois OFF | 4.7 (135)  |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                         |      |
|--------------|-------------------------|------|
| 50.0         | Air Force vs N Illinois | 64.2 |

## RUSHING GAME

| RUSH YARDS / GAME                    |            |                                 |            |
|--------------------------------------|------------|---------------------------------|------------|
| <b>+121.9</b><br>head-to-head +209.0 | 252.7 (4)  | Air Force OFF vs N Illinois DEF | 172.3 (93) |
|                                      | 147.7 (64) | Air Force DEF vs N Illinois OFF | 68.3 (137) |

| RUSH YARDS / ATTEMPT               |          |                                 |            |
|------------------------------------|----------|---------------------------------|------------|
| <b>+1.04</b><br>head-to-head +2.70 | 4.2 (70) | Air Force OFF vs N Illinois DEF | 5.2 (118)  |
|                                    | 4.3 (69) | Air Force DEF vs N Illinois OFF | 2.40 (136) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                 |          |
|------------|---------------------------------|----------|
| 0.00 (1)   | Air Force OFF vs N Illinois DEF | 4.2 (53) |
| 2.80 (96)  | Air Force DEF vs N Illinois OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |           |                                 |            |                                                                                                                                              |
|-------|-----------|---------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.94 | 3.5 (18)  | Air Force OFF vs N Illinois DEF | 2.90 (77)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 2.93 (82) | Air Force DEF vs N Illinois OFF | 2.56 (131) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |           |                                 |           |                             |
|--|-----------|---------------------------------|-----------|-----------------------------|
|  | 0.82 (20) | Air Force OFF vs N Illinois DEF | 0.58 (17) | +5.41<br>head-to-head +8.95 |
|  | 0.73 (73) | Air Force DEF vs N Illinois OFF | 0.76 (53) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|       |           |                                 |            |                                                                                                                                            |
|-------|-----------|---------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +11.3 | 0.10 (3)  | Air Force OFF vs N Illinois DEF | 0.20 (60)  | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|       | 0.21 (55) | Air Force DEF vs N Illinois OFF | 0.21 (115) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                             |           |                                 |            |
|-----------------------------|-----------|---------------------------------|------------|
| +10.7<br>head-to-head +12.2 | 0.07 (1)  | Air Force OFF vs N Illinois DEF | 0.13 (116) |
|                             | 0.14 (90) | Air Force DEF vs N Illinois OFF | 0.18 (121) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                             |           |                                 |            |
|-----------------------------|-----------|---------------------------------|------------|
| +0.23<br>head-to-head +0.38 | 1.09 (72) | Air Force OFF vs N Illinois DEF | 1.24 (116) |
|                             | 1.01 (84) | Air Force DEF vs N Illinois OFF | 0.94 (112) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                             |            |                                 |            |
|-----------------------------|------------|---------------------------------|------------|
| -0.32<br>head-to-head +0.20 | 0.54 (126) | Air Force OFF vs N Illinois DEF | 1.49 (112) |
|                             | 1.04 (71)  | Air Force DEF vs N Illinois OFF | 0.78 (114) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |             |
|-------------|------|-------------|
| -0.24 (76)  | F+   | -1.57 (132) |
| 0.15 (58)   | OF+  | -1.40 (129) |
| -0.50 (92)  | DF+  | -1.28 (127) |
| -0.30 (85)  | FEI  | -0.91 (130) |
| 0.07 (50)   | OFEI | -0.41 (115) |
| -0.28 (110) | DFEI | -0.34 (122) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.54**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.61**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|            |                         |             |
|------------|-------------------------|-------------|
| -0.04 (82) | NET SUCCESS RATE        | -0.41 (133) |
| 0.41 (74)  | OFF SUCCESS RATE (OSR)  | 0.21 (130)  |
| 0.45 (78)  | OPP SUCCESS RATE (DSR)  | 0.62 (130)  |
| 0.45 (53)  | OFF SUCCESS RATE (CFBD) | 0.36 (126)  |
| 0.33 (14)  | DEF SUCCESS RATE (CFBD) | 0.44 (109)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.37**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.19**

head-to-head +0.37

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |             |
|-----------|-----------------|-------------|
| 0.19 (58) | OFF PPA         | -0.12 (136) |
| 0.00 (51) | DEF PPA ALLOWED | 0.16 (106)  |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.13**

head-to-head +0.47

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

| BREAKDOWN     |            |                                     |            |                                                                                                                                                                    |
|---------------|------------|-------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PLAYS / GAME  |            |                                     |            |                                                                                                                                                                    |
| +13.1         | 68.3       | James Madison OFF vs Georgia So DEF | 65.0       | Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.                    |
|               | 76.3       | James Madison DEF vs Georgia So OFF | 66.5       |                                                                                                                                                                    |
| POINTS / GAME |            |                                     |            |                                                                                                                                                                    |
| +25.0         | 34.3 (25)  | James Madison OFF vs Georgia So DEF | 29.8 (90)  | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|               | 15.8 (13)  | James Madison DEF vs Georgia So OFF | 23.3 (78)  |                                                                                                                                                                    |
| YARDS / GAME  |            |                                     |            |                                                                                                                                                                    |
| +83.9         | 421.5 (39) | James Madison OFF vs Georgia So DEF | 365.0 (55) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.               |
|               | 353.3 (50) | James Madison DEF vs Georgia So OFF | 349.3 (84) |                                                                                                                                                                    |
| YARDS / PLAY  |            |                                     |            |                                                                                                                                                                    |
| +1.90         | 6.2 (32)   | James Madison OFF vs Georgia So DEF | 5.6 (70)   | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.                |
|               | 4.6 (16)   | James Madison DEF vs Georgia So OFF | 5.3 (73)   |                                                                                                                                                                    |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| +3.18                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | +3.50 |
| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.) |       |

| RED ZONE % |           |                                     |           |                                                                                                                                  |
|------------|-----------|-------------------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +26.4      | 95.2 (20) | James Madison OFF vs Georgia So DEF | 85.7 (67) | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|            | 72.7 (20) | James Madison DEF vs Georgia So OFF | 81.8 (86) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

| 3RD DOWN %                                                                                                        |           |                                     |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|-------------------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 37.7 (82) | James Madison OFF vs Georgia So DEF | 36.2 (46) | -7.76 |
|                                                                                                                   | 40.0 (74) | James Madison DEF vs Georgia So OFF | 41.7 (56) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

| PASSING GAME      |             |                                     |            |                             |
|-------------------|-------------|-------------------------------------|------------|-----------------------------|
| PASS YARDS / GAME |             |                                     |            |                             |
|                   | 217.5 (70)  | James Madison OFF vs Georgia So DEF | 214.5 (61) | +45.8<br>head-to-head +60.6 |
|                   | 252.3 (100) | James Madison DEF vs Georgia So OFF | 240.3 (52) |                             |

| PASS YARDS / ATTEMPT               |          |                                     |           |
|------------------------------------|----------|-------------------------------------|-----------|
| <b>-0.04</b><br>head-to-head +1.70 | 7.3 (68) | James Madison OFF vs Georgia So DEF | 7.5 (71)  |
|                                    | 6.7 (44) | James Madison DEF vs Georgia So OFF | 6.4 (104) |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                             |           |
|-----------|-----------------------------|-----------|
| 73.6 (56) | James Madison vs Georgia So | 64.9 (71) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                     |           |
|----------------------|-------------------------------------|-----------|
| 66.6 (34)            | James Madison OFF vs Georgia So DEF | 56.2 (65) |
| 58.4 (71)            | James Madison DEF vs Georgia So OFF | 51.6 (65) |

| SACKS ALLOWED / GAME |                                     |            |                                    |
|----------------------|-------------------------------------|------------|------------------------------------|
| 1.00 (15)            | James Madison OFF vs Georgia So DEF | 1.30 (100) | <b>-8.10</b><br>head-to-head +3.42 |
| 3.5 (6)              | James Madison DEF vs Georgia So OFF | 1.50 (42)  |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                             |      |
|--------------|-----------------------------|------|
| 63.9         | James Madison vs Georgia So | 63.6 |

| QB RUSH YARDS / GAME |                             |    |
|----------------------|-----------------------------|----|
| --                   | James Madison vs Georgia So | -- |

| PASSING EXPLOSIVENESS |                                     |           |                                    |
|-----------------------|-------------------------------------|-----------|------------------------------------|
| 1.22 (74)             | James Madison OFF vs Georgia So DEF | 1.10 (26) | <b>+0.02</b><br>head-to-head +0.16 |
| 1.29 (94)             | James Madison DEF vs Georgia So OFF | 1.20 (84) |                                    |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                     |      |
|----------------------|-------------------------------------|------|
| 0.30                 | James Madison OFF vs Georgia So DEF | --   |
| --                   | James Madison DEF vs Georgia So OFF | 0.30 |

## RUSHING GAME

| RUSH YARDS / GAME                   |            |                                     |             |
|-------------------------------------|------------|-------------------------------------|-------------|
| <b>+51.4</b><br>head-to-head +144.5 | 204.0 (22) | James Madison OFF vs Georgia So DEF | 150.5 (67)  |
|                                     | 101.0 (21) | James Madison DEF vs Georgia So OFF | 109.0 (106) |

| RUSH YARDS / ATTEMPT               |           |                                     |          |
|------------------------------------|-----------|-------------------------------------|----------|
| <b>+1.34</b><br>head-to-head +2.80 | 5.4 (13)  | James Madison OFF vs Georgia So DEF | 4.3 (69) |
|                                    | 2.90 (15) | James Madison DEF vs Georgia So OFF | 4.0 (78) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                     |          |
|------------|-------------------------------------|----------|
| 0.00 (1)   | James Madison OFF vs Georgia So DEF | 5.8 (11) |
| 5.2 (25)   | James Madison DEF vs Georgia So OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                     |           |
|------------|-----------|-------------------------------------|-----------|
| +0.61      | 3.4 (31)  | James Madison OFF vs Georgia So DEF | 2.83 (69) |
|            | 2.61 (29) | James Madison DEF vs Georgia So OFF | 3.00 (87) |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                                     |           |
|--------------------|-----------|-------------------------------------|-----------|
|                    | 0.72 (84) | James Madison OFF vs Georgia So DEF | 0.68 (52) |
|                    | 0.75 (85) | James Madison DEF vs Georgia So OFF | 0.71 (86) |

+2.64  
head-to-head +6.01

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                     |           |
|------------|-----------|-------------------------------------|-----------|
| +0.40      | 0.13 (25) | James Madison OFF vs Georgia So DEF | 0.21 (52) |
|            | 0.17 (88) | James Madison DEF vs Georgia So OFF | 0.17 (67) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +2.53<br>head-to-head +5.60 | 0.10 (12) | James Madison OFF vs Georgia So DEF | 0.18 (38)  |
|                             | 0.17 (57) | James Madison DEF vs Georgia So OFF | 0.17 (112) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                     |           |
|-----------------------------|-----------|-------------------------------------|-----------|
| +0.15<br>head-to-head +0.51 | 1.21 (49) | James Madison OFF vs Georgia So DEF | 1.04 (92) |
|                             | 0.74 (18) | James Madison DEF vs Georgia So OFF | 1.01 (99) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                     |           |
|-----------------------------|-----------|-------------------------------------|-----------|
| +0.63<br>head-to-head +1.39 | 2.28 (9)  | James Madison OFF vs Georgia So DEF | 0.70 (32) |
|                             | 0.36 (11) | James Madison DEF vs Georgia So OFF | 1.23 (72) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |             |
|-----------|------|-------------|
| 0.67 (42) | F+   | -0.62 (101) |
| 0.51 (46) | OF+  | -0.12 (75)  |
| 0.71 (34) | DF+  | -0.83 (105) |
| 0.29 (46) | FEI  | -0.53 (103) |
| 0.07 (50) | OFEI | -0.06 (67)  |
| 0.19 (43) | DFEI | -0.32 (117) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.64**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.82**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |            |
|-----------|-------------------------|------------|
| 0.28 (11) | NET SUCCESS RATE        | -0.03 (78) |
| 0.55 (25) | OFF SUCCESS RATE (OSR)  | 0.42 (70)  |
| 0.26 (12) | OPP SUCCESS RATE (DSR)  | 0.45 (78)  |
| 0.49 (27) | OFF SUCCESS RATE (CFBD) | 0.42 (90)  |
| 0.32 (10) | DEF SUCCESS RATE (CFBD) | 0.38 (55)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.32**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.15**

head-to-head +0.32

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.33 (13)  | OFF PPA         | 0.13 (79) |
| -0.10 (14) | DEF PPA ALLOWED | 0.08 (80) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.19**

head-to-head +0.37

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI -4.2

LOUISIANA

SOR 49

SOR 68

LOUISIANA TECH

FPI -5.3

4-1

Louisiana Tech 32.2 - Louisiana 21.5 (69% Louisiana Tech)

2-2

Pass 34% / Rush 66%

Pass 48% / Rush 52%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                     |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 67.8 | Louisiana OFF vs Louisiana Tech DEF | 76.7 | -17.2 |
|                                                                                                                                                 | 58.0 | Louisiana DEF vs Louisiana Tech OFF | 66.3 |       |

POINTS / GAME

|       |           |                                     |            |                                                                                                                                                                    |
|-------|-----------|-------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +19.9 | 27.0 (65) | Louisiana OFF vs Louisiana Tech DEF | 36.7 (120) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 22.5 (46) | Louisiana DEF vs Louisiana Tech OFF | 21.3 (91)  |                                                                                                                                                                    |

YARDS / GAME

|        |            |                                     |             |                                                                                                                                                      |
|--------|------------|-------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +193.2 | 355.0 (82) | Louisiana OFF vs Louisiana Tech DEF | 455.7 (122) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|        | 282.8 (16) | Louisiana DEF vs Louisiana Tech OFF | 334.7 (99)  |                                                                                                                                                      |

YARDS / PLAY

|       |          |                                     |          |                                                                                                                                                     |
|-------|----------|-------------------------------------|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +1.20 | 5.2 (77) | Louisiana OFF vs Louisiana Tech DEF | 5.9 (91) | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 4.9 (34) | Louisiana DEF vs Louisiana Tech OFF | 5.0 (92) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +5.48                                          | +15.1 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                     |            |                                                                                                                                  |
|-------|-----------|-------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +42.2 | 100.0 (1) | Louisiana OFF vs Louisiana Tech DEF | 86.7 (72)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 88.9 (89) | Louisiana DEF vs Louisiana Tech OFF | 55.6 (133) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                     |            |                                                                                                                   |
|-------|-----------|-------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +8.40 | 36.7 (88) | Louisiana OFF vs Louisiana Tech DEF | 45.5 (111) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 38.8 (63) | Louisiana DEF vs Louisiana Tech OFF | 35.0 (94)  |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                             |             |                                     |             |
|-----------------------------|-------------|-------------------------------------|-------------|
| -18.8<br>head-to-head +37.2 | 166.3 (116) | Louisiana OFF vs Louisiana Tech DEF | 261.7 (108) |
|                             | 182.5 (29)  | Louisiana DEF vs Louisiana Tech OFF | 208.3 (84)  |

| PASS YARDS / ATTEMPT               |          |                                     |           |
|------------------------------------|----------|-------------------------------------|-----------|
| <b>+1.26</b><br>head-to-head +3.20 | 7.3 (68) | Louisiana OFF vs Louisiana Tech DEF | 8.8 (118) |
|                                    | 6.1 (17) | Louisiana DEF vs Louisiana Tech OFF | 6.8 (88)  |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                             |           |
|-----------|-----------------------------|-----------|
| 79.5 (42) | Louisiana vs Louisiana Tech | 63.5 (78) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                     |           |
|----------------------|-------------------------------------|-----------|
| 37.0 (97)            | Louisiana OFF vs Louisiana Tech DEF | 69.6 (98) |
| 74.0 (107)           | Louisiana DEF vs Louisiana Tech OFF | 49.6 (71) |

| SACKS ALLOWED / GAME |                                     |           |                                    |
|----------------------|-------------------------------------|-----------|------------------------------------|
| 1.50 (42)            | Louisiana OFF vs Louisiana Tech DEF | 3.0 (20)  | <b>-8.98</b><br>head-to-head +5.78 |
| 1.00 (109)           | Louisiana DEF vs Louisiana Tech OFF | 3.0 (113) |                                    |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                             |      |
|--------------|-----------------------------|------|
| 74.7         | Louisiana vs Louisiana Tech | 60.9 |

| QB RUSH YARDS / GAME |                             |    |
|----------------------|-----------------------------|----|
| --                   | Louisiana vs Louisiana Tech | -- |

| PASSING EXPLOSIVENESS |                                     |            |                                    |
|-----------------------|-------------------------------------|------------|------------------------------------|
| 1.11 (123)            | Louisiana OFF vs Louisiana Tech DEF | 1.30 (100) | <b>+0.00</b><br>head-to-head +0.05 |
| 1.02 (8)              | Louisiana DEF vs Louisiana Tech OFF | 1.44 (4)   |                                    |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                     |      |
|----------------------|-------------------------------------|------|
| 0.00                 | Louisiana OFF vs Louisiana Tech DEF | --   |
| --                   | Louisiana DEF vs Louisiana Tech OFF | 0.70 |

## RUSHING GAME

| RUSH YARDS / GAME                   |            |                                     |             |
|-------------------------------------|------------|-------------------------------------|-------------|
| <b>+79.7</b><br>head-to-head +156.2 | 188.8 (35) | Louisiana OFF vs Louisiana Tech DEF | 194.0 (114) |
|                                     | 100.3 (19) | Louisiana DEF vs Louisiana Tech OFF | 126.3 (88)  |

| RUSH YARDS / ATTEMPT               |          |                                     |          |
|------------------------------------|----------|-------------------------------------|----------|
| <b>+0.34</b><br>head-to-head +1.10 | 4.3 (62) | Louisiana OFF vs Louisiana Tech DEF | 4.4 (79) |
|                                    | 3.7 (40) | Louisiana DEF vs Louisiana Tech OFF | 3.9 (83) |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                     |          |
|------------|-------------------------------------|----------|
| 0.00 (1)   | Louisiana OFF vs Louisiana Tech DEF | 6.8 (4)  |
| 4.4 (46)   | Louisiana DEF vs Louisiana Tech OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                     |            |
|------------|-----------|-------------------------------------|------------|
| +0.07      | 3.2 (48)  | Louisiana OFF vs Louisiana Tech DEF | 2.30 (12)  |
|            | 2.72 (50) | Louisiana DEF vs Louisiana Tech OFF | 2.75 (116) |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +10.8<br>head-to-head +44.3 | 0.81 (29) | Louisiana OFF vs Louisiana Tech DEF | 0.74 (80)  |
|                             | 0.47 (6)  | Louisiana DEF vs Louisiana Tech OFF | 0.64 (113) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                     |            |
|------------|-----------|-------------------------------------|------------|
| +8.10      | 0.17 (65) | Louisiana OFF vs Louisiana Tech DEF | 0.22 (36)  |
|            | 0.24 (22) | Louisiana DEF vs Louisiana Tech OFF | 0.22 (125) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |           |                                     |            |
|------------|-----------|-------------------------------------|------------|
|            | 0.14 (54) | Louisiana OFF vs Louisiana Tech DEF | 0.22 (7)   |
|            | 0.18 (29) | Louisiana DEF vs Louisiana Tech OFF | 0.16 (105) |

-4.17  
head-to-head +1.20

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +0.03<br>head-to-head +0.36 | 1.26 (34) | Louisiana OFF vs Louisiana Tech DEF | 0.88 (36)  |
|                             | 0.86 (34) | Louisiana DEF vs Louisiana Tech OFF | 0.92 (117) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                     |            |
|-----------------------------|-----------|-------------------------------------|------------|
| +0.26<br>head-to-head +0.45 | 1.22 (73) | Louisiana OFF vs Louisiana Tech DEF | 1.39 (103) |
|                             | 0.47 (20) | Louisiana DEF vs Louisiana Tech OFF | 1.68 (27)  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -0.37 (85)  | F+   | -0.55 (99) |
| -0.46 (90)  | OF+  | -0.51 (92) |
| -0.07 (72)  | DF+  | -0.44 (88) |
| -0.44 (96)  | FEI  | -0.33 (90) |
| -0.34 (107) | OFEI | -0.27 (94) |
| 0.01 (65)   | DFEI | -0.01 (71) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.05

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.11

|           |                         |             |
|-----------|-------------------------|-------------|
| 0.15 (35) | NET SUCCESS RATE        | -0.14 (104) |
| 0.41 (78) | OFF SUCCESS RATE (OSR)  | 0.36 (88)   |
| 0.26 (10) | OPP SUCCESS RATE (DSR)  | 0.50 (100)  |
| 0.45 (54) | OFF SUCCESS RATE (CFBD) | 0.37 (123)  |
| 0.40 (72) | DEF SUCCESS RATE (CFBD) | 0.38 (53)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

+0.29

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+0.06

head-to-head +0.29

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |           |
|------------|-----------------|-----------|
| 0.16 (68)  | OFF PPA         | 0.09 (99) |
| -0.10 (11) | DEF PPA ALLOWED | 0.05 (66) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

-0.00

head-to-head +0.23

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

FPI 3.0

MINNESOTA

SOR 33

at

SOR 64

PURDUE

FPI -0.4

4-1

Minnesota 33.6 - Purdue 22.4 (70% Minnesota)

2-3

Pass 52% / Rush 48%

Pass 51% / Rush 49%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.

64.5

Minnesota OFF vs Purdue DEF

68.5

-12.7

61.3

Minnesota DEF vs Purdue OFF

70.0

POINTS / GAME

+16.5

25.3 (71)

Minnesota OFF vs Purdue DEF

39.0 (127)

Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.

20.8 (38)

Minnesota DEF vs Purdue OFF

27.0 (65)

YARDS / GAME

+114.5

319.5 (107)

Minnesota OFF vs Purdue DEF

461.3 (127)

Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.

289.8 (20)

Minnesota DEF vs Purdue OFF

376.5 (64)

YARDS / PLAY

+1.60

5.0 (92)

Minnesota OFF vs Purdue DEF

6.7 (121)

Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.

4.7 (23)

Minnesota DEF vs Purdue OFF

5.4 (66)

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+2.64

+17.4

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

+13.0

93.8 (23)

Minnesota OFF vs Purdue DEF

90.0 (94)

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.

81.8 (52)

Minnesota DEF vs Purdue OFF

88.9 (51)

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+13.8

30.9 (114)

Minnesota OFF vs Purdue DEF

56.5 (136)

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.

30.2 (19)

Minnesota DEF vs Purdue OFF

43.4 (43)

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

head-to-head +27.7

PASS YARDS / ATTEMPT

|           |                             |          |                    |
|-----------|-----------------------------|----------|--------------------|
| 6.2 (110) | Minnesota OFF vs Purdue DEF | 8.1 (92) | +0.56              |
| 6.7 (44)  | Minnesota DEF vs Purdue OFF | 8.7 (24) | head-to-head +1.10 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                     |           |
|-----------|---------------------|-----------|
| 67.4 (65) | Minnesota vs Purdue | 81.0 (33) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                             |           |
|----------------------|-----------------------------|-----------|
| 37.8 (96)            | Minnesota OFF vs Purdue DEF | 35.0 (18) |
| 72.3 (100)           | Minnesota DEF vs Purdue OFF | 64.8 (39) |

| SACKS ALLOWED / GAME |           |                             |            |
|----------------------|-----------|-----------------------------|------------|
| -7.82                | 1.00 (15) | Minnesota OFF vs Purdue DEF | 1.00 (109) |
| head-to-head +4.84   | 3.3 (14)  | Minnesota DEF vs Purdue OFF | 2.80 (104) |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                     |      |
|--------------|---------------------|------|
| 64.7         | Minnesota vs Purdue | 69.3 |

| QB RUSH YARDS / GAME |                     |    |
|----------------------|---------------------|----|
| --                   | Minnesota vs Purdue | -- |

| PASSING EXPLOSIVENESS |            |                             |            |
|-----------------------|------------|-----------------------------|------------|
| -0.02                 | 1.07 (131) | Minnesota OFF vs Purdue DEF | 1.37 (119) |
| head-to-head +0.07    | 1.17 (45)  | Minnesota DEF vs Purdue OFF | 1.21 (78)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                             |      |
|----------------------|-----------------------------|------|
| 1.00                 | Minnesota OFF vs Purdue DEF | --   |
| --                   | Minnesota DEF vs Purdue OFF | 0.30 |

| RUSHING GAME         |             |                             |             |
|----------------------|-------------|-----------------------------|-------------|
| RUSH YARDS / GAME    |             |                             |             |
| +23.7                | 113.8 (101) | Minnesota OFF vs Purdue DEF | 213.0 (127) |
| head-to-head +142.2  | 104.8 (24)  | Minnesota DEF vs Purdue OFF | 79.8 (134)  |
| RUSH YARDS / ATTEMPT |             |                             |             |
| +1.24                | 3.8 (89)    | Minnesota OFF vs Purdue DEF | 5.8 (129)   |
| head-to-head +3.80   | 3.4 (30)    | Minnesota DEF vs Purdue OFF | 2.40 (136)  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                             |          |
|------------|-----------------------------|----------|
| 0.00 (1)   | Minnesota OFF vs Purdue DEF | 3.2 (90) |
| 5.8 (11)   | Minnesota DEF vs Purdue OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|       |            |                             |            |                                                                                                                                              |
|-------|------------|-----------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.16 | 2.38 (136) | Minnesota OFF vs Purdue DEF | 3.3 (125)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|       | 2.76 (57)  | Minnesota DEF vs Purdue OFF | 2.81 (109) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|                             |            |                             |            |
|-----------------------------|------------|-----------------------------|------------|
| -1.89<br>head-to-head +5.79 | 0.64 (113) | Minnesota OFF vs Purdue DEF | 0.78 (106) |
|                             | 0.61 (24)  | Minnesota DEF vs Purdue OFF | 0.75 (60)  |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|       |            |                             |            |                                                                                                                                            |
|-------|------------|-----------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| +4.35 | 0.24 (128) | Minnesota OFF vs Purdue DEF | 0.15 (122) | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|       | 0.25 (14)  | Minnesota DEF vs Purdue OFF | 0.18 (75)  |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                             |           |                             |            |
|-----------------------------|-----------|-----------------------------|------------|
| +2.83<br>head-to-head +9.80 | 0.14 (67) | Minnesota OFF vs Purdue DEF | 0.14 (103) |
|                             | 0.25 (3)  | Minnesota DEF vs Purdue OFF | 0.13 (39)  |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                             |            |                             |            |
|-----------------------------|------------|-----------------------------|------------|
| -0.00<br>head-to-head +0.27 | 0.76 (134) | Minnesota OFF vs Purdue DEF | 1.34 (132) |
|                             | 1.00 (77)  | Minnesota DEF vs Purdue OFF | 0.83 (128) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|                             |           |                             |            |
|-----------------------------|-----------|-----------------------------|------------|
| +0.39<br>head-to-head +1.77 | 1.17 (76) | Minnesota OFF vs Purdue DEF | 1.57 (117) |
|                             | 0.52 (22) | Minnesota DEF vs Purdue OFF | 0.45 (134) |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|            |      |             |
|------------|------|-------------|
| 0.45 (51)  | F+   | -0.11 (71)  |
| -0.11 (74) | OF+  | 0.43 (49)   |
| 0.84 (27)  | DF+  | -0.78 (100) |
| 0.26 (47)  | FEI  | -0.03 (64)  |
| -0.12 (76) | OFEI | 0.10 (47)   |
| 0.27 (30)  | DFEI | -0.18 (94)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.23**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.29**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |             |
|-----------|-------------------------|-------------|
| 0.13 (39) | NET SUCCESS RATE        | -0.17 (107) |
| 0.41 (82) | OFF SUCCESS RATE (OSR)  | 0.49 (46)   |
| 0.28 (15) | OPP SUCCESS RATE (DSR)  | 0.66 (134)  |
| 0.45 (55) | OFF SUCCESS RATE (CFBD) | 0.46 (45)   |
| 0.37 (45) | DEF SUCCESS RATE (CFBD) | 0.48 (131)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

**+0.30**

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.21**

head-to-head +0.30

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.06 (109) | OFF PPA         | 0.25 (34)  |
| -0.01 (42) | DEF PPA ALLOWED | 0.30 (135) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.15**

head-to-head +0.12

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                                  |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 73.4 | Hawai'i OFF vs Arizona State DEF | 72.7 | -2.60 |
|                                                                                                                                                 | 66.4 | Hawai'i DEF vs Arizona State OFF | 69.7 |       |

POINTS / GAME

|       |            |                                  |            |                                                                                                                                                                    |
|-------|------------|----------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| +11.8 | 17.6 (110) | Hawai'i OFF vs Arizona State DEF | 40.0 (131) | Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. |
|       | 24.8 (57)  | Hawai'i DEF vs Arizona State OFF | 21.0 (95)  |                                                                                                                                                                    |

YARDS / GAME

|       |            |                                  |            |                                                                                                                                                      |
|-------|------------|----------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +51.9 | 360.8 (76) | Hawai'i OFF vs Arizona State DEF | 411.0 (95) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|       | 384.6 (72) | Hawai'i DEF vs Arizona State OFF | 335.3 (98) |                                                                                                                                                      |

YARDS / PLAY

|       |           |                                  |           |                                                                                                                                                     |
|-------|-----------|----------------------------------|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| +0.00 | 4.9 (102) | Hawai'i OFF vs Arizona State DEF | 5.7 (76)  | Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. |
|       | 5.8 (83)  | Hawai'i DEF vs Arizona State OFF | 4.8 (109) |                                                                                                                                                     |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +4.38                                          | +4.41 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '-' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|                                                                                                                                  |            |                                  |           |       |
|----------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|-----------|-------|
| Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. | 66.7 (123) | Hawai'i OFF vs Arizona State DEF | 84.6 (64) | -20.9 |
|                                                                                                                                  | 88.9 (89)  | Hawai'i DEF vs Arizona State OFF | 83.3 (76) |       |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                  |            |                                                                                                                   |
|-------|-----------|----------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
| +14.0 | 38.3 (79) | Hawai'i OFF vs Arizona State DEF | 41.9 (92)  | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 41.2 (83) | Hawai'i DEF vs Arizona State OFF | 25.0 (125) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|                             |            |                                  |            |
|-----------------------------|------------|----------------------------------|------------|
| +67.3<br>head-to-head +68.0 | 274.8 (28) | Hawai'i OFF vs Arizona State DEF | 239.3 (86) |
|                             | 226.4 (72) | Hawai'i DEF vs Arizona State OFF | 219.7 (69) |

| PASS YARDS / ATTEMPT |           |                                  |          |                    |
|----------------------|-----------|----------------------------------|----------|--------------------|
|                      | 6.1 (114) | Hawai'i OFF vs Arizona State DEF | 7.1 (56) | -0.14              |
|                      | 8.2 (98)  | Hawai'i DEF vs Arizona State OFF | 6.5 (98) | head-to-head +1.50 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR        |                          |           |
|------------|--------------------------|-----------|
| 54.7 (107) | Hawai'i vs Arizona State | 59.6 (96) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                  |           |
|----------------------|----------------------------------|-----------|
| 26.5 (117)           | Hawai'i OFF vs Arizona State DEF | 68.6 (96) |
| 31.3 (15)            | Hawai'i DEF vs Arizona State OFF | 43.7 (80) |

| SACKS ALLOWED / GAME |            |                                  |           |  |
|----------------------|------------|----------------------------------|-----------|--|
| -13.2                | 2.80 (104) | Hawai'i OFF vs Arizona State DEF | 1.70 (84) |  |
| head-to-head +1.06   | 2.00 (60)  | Hawai'i DEF vs Arizona State OFF | 2.00 (77) |  |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                          |      |
|--------------|--------------------------|------|
| 59.8         | Hawai'i vs Arizona State | 57.4 |

| QB RUSH YARDS / GAME |                          |    |
|----------------------|--------------------------|----|
| --                   | Hawai'i vs Arizona State | -- |

| PASSING EXPLOSIVENESS |            |                                  |            |  |
|-----------------------|------------|----------------------------------|------------|--|
| +0.05                 | 1.14 (116) | Hawai'i OFF vs Arizona State DEF | 1.38 (120) |  |
| head-to-head +0.07    | 1.19 (57)  | Hawai'i DEF vs Arizona State OFF | 1.26 (60)  |  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                  |      |
|----------------------|----------------------------------|------|
| 0.60                 | Hawai'i OFF vs Arizona State DEF | --   |
| --                   | Hawai'i DEF vs Arizona State OFF | 1.00 |

| RUSHING GAME      |            |                                  |            |                    |
|-------------------|------------|----------------------------------|------------|--------------------|
| RUSH YARDS / GAME |            |                                  |            |                    |
|                   | 86.0 (128) | Hawai'i OFF vs Arizona State DEF | 171.7 (92) | -29.2              |
|                   | 158.2 (72) | Hawai'i DEF vs Arizona State OFF | 115.7 (99) | head-to-head +16.2 |

| RUSH YARDS / ATTEMPT |           |                                  |           |  |
|----------------------|-----------|----------------------------------|-----------|--|
| -0.46                | 3.3 (107) | Hawai'i OFF vs Arizona State DEF | 4.6 (87)  |  |
| head-to-head +0.20   | 4.3 (69)  | Hawai'i DEF vs Arizona State OFF | 3.4 (105) |  |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                  |          |
|------------|----------------------------------|----------|
| 0.00 (1)   | Hawai'i OFF vs Arizona State DEF | 3.5 (82) |
| 4.2 (53)   | Hawai'i DEF vs Arizona State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                  |            |                                                                                                                                              |
|------------|-----------|----------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| +0.02      | 3.2 (60)  | Hawai'i OFF vs Arizona State DEF | 2.94 (83)  | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|            | 3.3 (119) | Hawai'i DEF vs Arizona State OFF | 2.83 (107) |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE |           |                                  |           |                             |
|--------------------|-----------|----------------------------------|-----------|-----------------------------|
|                    | 0.76 (53) | Hawai'i OFF vs Arizona State DEF | 0.69 (59) | +8.99<br>head-to-head +7.08 |
|                    | 0.75 (85) | Hawai'i DEF vs Arizona State OFF | 0.78 (47) |                             |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE                                                                                                                                 |            |                                  |            |       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------|------------|-------|
| How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. | 0.17 (70)  | Hawai'i OFF vs Arizona State DEF | 0.15 (118) | -0.13 |
|                                                                                                                                            | 0.14 (129) | Hawai'i DEF vs Arizona State OFF | 0.19 (89)  |       |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE |            |                                  |            |                             |
|------------|------------|----------------------------------|------------|-----------------------------|
|            | 0.17 (112) | Hawai'i OFF vs Arizona State DEF | 0.14 (101) | +1.03<br>head-to-head +1.00 |
|            | 0.13 (105) | Hawai'i DEF vs Arizona State OFF | 0.16 (105) |                             |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS |            |                                  |           |                             |
|-----------------|------------|----------------------------------|-----------|-----------------------------|
|                 | 1.23 (43)  | Hawai'i OFF vs Arizona State DEF | 0.91 (42) | +0.15<br>head-to-head +0.13 |
|                 | 1.12 (103) | Hawai'i DEF vs Arizona State OFF | 1.13 (64) |                             |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS            |           |                                  |            |  |
|-----------------------------|-----------|----------------------------------|------------|--|
| +0.47<br>head-to-head +0.60 | 1.31 (64) | Hawai'i OFF vs Arizona State DEF | 1.52 (114) |  |
|                             | 1.03 (70) | Hawai'i DEF vs Arizona State OFF | 1.19 (75)  |  |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|             |      |            |
|-------------|------|------------|
| -1.04 (116) | F+   | 0.08 (62)  |
| -1.14 (120) | OF+  | -0.21 (81) |
| -0.90 (110) | DF+  | 0.38 (48)  |
| -0.73 (116) | FEI  | 0.10 (57)  |
| -0.46 (118) | OFEI | -0.14 (78) |
| -0.32 (117) | DFEI | 0.23 (36)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.87

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.83

|            |                         |             |
|------------|-------------------------|-------------|
| -0.01 (72) | NET SUCCESS RATE        | -0.14 (105) |
| 0.36 (88)  | OFF SUCCESS RATE (OSR)  | 0.33 (98)   |
| 0.38 (49)  | OPP SUCCESS RATE (DSR)  | 0.47 (88)   |
| 0.39 (116) | OFF SUCCESS RATE (CFBD) | 0.42 (97)   |
| 0.45 (114) | DEF SUCCESS RATE (CFBD) | 0.38 (54)   |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

+0.12

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-0.01

head-to-head +0.13

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|            |                 |            |
|------------|-----------------|------------|
| 0.04 (114) | OFF PPA         | 0.02 (116) |
| 0.20 (119) | DEF PPA ALLOWED | 0.14 (97)  |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

+0.01

head-to-head +0.05

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

Pass 47% / Rush 53%

**THE STAKES:** This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

|                                                                                                                                                 |      |                        |      |       |
|-------------------------------------------------------------------------------------------------------------------------------------------------|------|------------------------|------|-------|
| Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash. | 76.3 | Kansas OFF vs Utah DEF | 71.0 | -0.30 |
|                                                                                                                                                 | 60.7 | Kansas DEF vs Utah OFF | 66.3 |       |

POINTS / GAME

|                                                                                                                                                                    |           |                        |           |       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------------------|-----------|-------|
| Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout. | 31.0 (48) | Kansas OFF vs Utah DEF | 9.0 (1)   | -16.4 |
|                                                                                                                                                                    | 20.7 (37) | Kansas DEF vs Utah OFF | 35.7 (18) |       |

YARDS / GAME

|       |            |                        |            |                                                                                                                                                      |
|-------|------------|------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| +6.00 | 458.0 (21) | Kansas OFF vs Utah DEF | 269.7 (10) | Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance. |
|       | 277.7 (12) | Kansas DEF vs Utah OFF | 444.0 (27) |                                                                                                                                                      |

YARDS / PLAY

|                                                                                                                                                     |          |                        |         |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------|------------------------|---------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 6.0 (43) | Kansas OFF vs Utah DEF | 3.8 (2) | -1.50 |
|                                                                                                                                                     | 4.6 (16) | Kansas DEF vs Utah OFF | 6.7 (9) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| +1.76                                          | -7.40 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                        |           |                                                                                                                                  |
|-------|-----------|------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------|
| +5.83 | 100.0 (1) | Kansas OFF vs Utah DEF | 60.0 (3)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 62.5 (5)  | Kansas DEF vs Utah OFF | 91.7 (35) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|                                                                                                                   |           |                        |           |       |
|-------------------------------------------------------------------------------------------------------------------|-----------|------------------------|-----------|-------|
| Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. | 37.2 (84) | Kansas OFF vs Utah DEF | 31.1 (21) | -8.95 |
|                                                                                                                   | 27.3 (11) | Kansas DEF vs Utah OFF | 50.0 (12) |       |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

|----------|------------------------|----------|--------------------|
| 7.1 (79) | Kansas OFF vs Utah DEF | 4.9 (2)  | -0.34              |
| 5.9 (9)  | Kansas DEF vs Utah OFF | 8.6 (25) | head-to-head +2.50 |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR       |                |           |
|-----------|----------------|-----------|
| 60.4 (92) | Kansas vs Utah | 86.7 (17) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                        |            |
|----------------------|------------------------|------------|
| 46.8 (74)            | Kansas OFF vs Utah DEF | 81.1 (125) |
| 76.2 (110)           | Kansas DEF vs Utah OFF | 81.8 (10)  |

| SACKS ALLOWED / GAME |                        |           |                    |
|----------------------|------------------------|-----------|--------------------|
| 1.70 (57)            | Kansas OFF vs Utah DEF | 3.3 (14)  | -9.02              |
| 1.00 (109)           | Kansas DEF vs Utah OFF | 1.00 (15) | head-to-head +2.24 |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                |      |
|--------------|----------------|------|
| 52.8         | Kansas vs Utah | 68.5 |

| QB RUSH YARDS / GAME |                |    |
|----------------------|----------------|----|
| --                   | Kansas vs Utah | -- |

| PASSING EXPLOSIVENESS |           |                        |            |
|-----------------------|-----------|------------------------|------------|
| +0.19                 | 1.32 (28) | Kansas OFF vs Utah DEF | 1.34 (108) |
| head-to-head +0.06    | 1.28 (88) | Kansas DEF vs Utah OFF | 1.32 (26)  |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                        |      |
|----------------------|------------------------|------|
| 1.00                 | Kansas OFF vs Utah DEF | --   |
| --                   | Kansas DEF vs Utah OFF | 0.30 |

## RUSHING GAME

| RUSH YARDS / GAME  |            |                        |            |
|--------------------|------------|------------------------|------------|
| +19.9              | 246.3 (5)  | Kansas OFF vs Utah DEF | 76.7 (7)   |
| head-to-head +21.6 | 121.7 (42) | Kansas DEF vs Utah OFF | 179.7 (44) |

| RUSH YARDS / ATTEMPT |          |                        |                    |
|----------------------|----------|------------------------|--------------------|
|                      | 5.5 (10) | Kansas OFF vs Utah DEF | 2.70 (11)          |
|                      | 3.7 (40) | Kansas DEF vs Utah OFF | 5.2 (17)           |
|                      |          |                        | +0.54              |
|                      |          |                        | head-to-head +0.70 |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                        |          |
|------------|------------------------|----------|
| 0.00 (1)   | Kansas OFF vs Utah DEF | 4.2 (53) |
| 5.5 (18)   | Kansas DEF vs Utah OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

### LINE YARDS

|              |          |                        |           |                                                                                                                                              |
|--------------|----------|------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+0.83</b> | 3.7 (3)  | Kansas OFF vs Utah DEF | 2.63 (38) | Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control. |
|              | 2.06 (4) | Kansas DEF vs Utah OFF | 3.5 (19)  |                                                                                                                                              |

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

### POWER SUCCESS RATE

|  |            |                        |           |                                    |
|--|------------|------------------------|-----------|------------------------------------|
|  | 0.67 (102) | Kansas OFF vs Utah DEF | 0.50 (7)  | <b>+5.12</b><br>head-to-head +32.2 |
|  | 0.75 (85)  | Kansas DEF vs Utah OFF | 0.74 (75) |                                    |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

### STUFF RATE

|              |          |                        |            |                                                                                                                                            |
|--------------|----------|------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>+18.3</b> | 0.08 (1) | Kansas OFF vs Utah DEF | 0.20 (56)  | How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front. |
|              | 0.28 (6) | Kansas DEF vs Utah OFF | 0.19 (100) |                                                                                                                                            |

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

### HAVOC RATE

|                                    |           |                        |           |
|------------------------------------|-----------|------------------------|-----------|
| <b>-3.87</b><br>head-to-head +0.60 | 0.14 (64) | Kansas OFF vs Utah DEF | 0.20 (17) |
|                                    | 0.22 (9)  | Kansas DEF vs Utah OFF | 0.13 (38) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

### 2ND LEVEL YARDS

|                                    |           |                        |           |
|------------------------------------|-----------|------------------------|-----------|
| <b>+0.17</b><br>head-to-head +0.28 | 1.37 (13) | Kansas OFF vs Utah DEF | 0.90 (40) |
|                                    | 0.59 (4)  | Kansas DEF vs Utah OFF | 1.40 (8)  |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

### OPEN FIELD YARDS

|  |           |                        |           |                                    |
|--|-----------|------------------------|-----------|------------------------------------|
|  | 1.09 (83) | Kansas OFF vs Utah DEF | 0.45 (18) | <b>+0.25</b><br>head-to-head +1.05 |
|  | 0.90 (56) | Kansas DEF vs Utah OFF | 1.70 (24) |                                    |

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |           |
|-----------|------|-----------|
| 0.47 (50) | F+   | 1.74 (7)  |
| 0.32 (51) | OF+  | 1.56 (9)  |
| 0.46 (44) | DF+  | 1.57 (12) |
| 0.26 (47) | FEI  | 1.23 (5)  |
| 0.11 (43) | OFEI | 0.56 (9)  |
| 0.09 (56) | DFEI | 0.57 (10) |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

**-0.93**

### FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

**-0.97**

|           |                         |           |
|-----------|-------------------------|-----------|
| 0.04 (58) | NET SUCCESS RATE        | 0.46 (3)  |
| 0.36 (88) | OFF SUCCESS RATE (OSR)  | 0.65 (5)  |
| 0.32 (35) | OPP SUCCESS RATE (DSR)  | 0.19 (3)  |
| 0.50 (16) | OFF SUCCESS RATE (CFBD) | 0.51 (14) |
| 0.28 (1)  | DEF SUCCESS RATE (CFBD) | 0.32 (8)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.42**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.13**

head-to-head +0.42

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.30 (20) | OFF PPA         | 0.33 (12)  |
| -0.14 (5) | DEF PPA ALLOWED | -0.07 (19) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.01**

head-to-head +0.03

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)

|       | 396.0 (81) | Boise St DEF vs Fresno State OFF | 367.2 (70) |                                                                                                                                                      |

YARDS / PLAY

|                                                                                                                                                     |           |                                  |          |       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------------|----------|-------|
| Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch. | 6.1 (35)  | Boise St OFF vs Fresno State DEF | 5.3 (57) | -1.20 |
|                                                                                                                                                     | 6.8 (124) | Boise St DEF vs Fresno State OFF | 5.8 (49) |       |

**SPEED VS SUBSTANCE:** Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

| THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS) |       |
|------------------------------------------------|-------|
| --                                             | -2.67 |

**THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS):** Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. This is a ratio: when a team's real Points-edge sits near zero (a close-scoring matchup) the ratio is mathematically unstable, not analytically meaningful, so it shows as '--' whenever the real Points-edge is under 3. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats). (Each side is measured against league average; a leaky defense now helps the offense.)

RED ZONE %

|       |           |                                  |            |                                                                                                                                  |
|-------|-----------|----------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------|
| +13.4 | 82.3 (83) | Boise St OFF vs Fresno State DEF | 80.0 (41)  | Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation. |
|       | 72.7 (20) | Boise St DEF vs Fresno State OFF | 76.2 (108) |                                                                                                                                  |

**THE BLOOD ZONE:** The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

|       |           |                                  |           |                                                                                                                   |
|-------|-----------|----------------------------------|-----------|-------------------------------------------------------------------------------------------------------------------|
| +23.9 | 50.9 (11) | Boise St OFF vs Fresno State DEF | 33.3 (28) | Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly. |
|       | 25.0 (4)  | Boise St DEF vs Fresno State OFF | 35.4 (92) |                                                                                                                   |

**MONEY DOWN EXECUTION:** The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

|  |             |                                  |            |       |
|--|-------------|----------------------------------|------------|-------|
|  | 212.5 (76)  | Boise St OFF vs Fresno State DEF | 215.4 (62) | +28.6 |
|  | 262.0 (112) | Boise St DEF vs Fresno State OFF | 213.4 (75) |       |

head-to-head +47.5

| PASS YARDS / ATTEMPT |           |                                  |          |                             |
|----------------------|-----------|----------------------------------|----------|-----------------------------|
|                      | 8.4 (33)  | Boise St OFF vs Fresno State DEF | 7.1 (56) | +1.66<br>head-to-head +1.00 |
|                      | 8.9 (123) | Boise St DEF vs Fresno State OFF | 7.6 (58) |                             |

**AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY):** Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE AERIAL ASSAULT:** Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

| QBR      |                          |           |
|----------|--------------------------|-----------|
| 90.5 (9) | Boise St vs Fresno State | 66.1 (70) |

**THE GENERALS' DUEL:** This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

| OFFENSIVE EFFICIENCY |                                  |           |
|----------------------|----------------------------------|-----------|
| 74.8 (21)            | Boise St OFF vs Fresno State DEF | 66.0 (91) |
| 62.7 (79)            | Boise St DEF vs Fresno State OFF | 39.9 (86) |

| SACKS ALLOWED / GAME |           |                                  |           |                             |
|----------------------|-----------|----------------------------------|-----------|-----------------------------|
|                      | 1.00 (15) | Boise St OFF vs Fresno State DEF | 2.60 (34) | -5.10<br>head-to-head +4.25 |
|                      | 2.50 (36) | Boise St DEF vs Fresno State OFF | 1.40 (41) |                             |

**THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED):** Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

| COMPLETION % |                          |      |
|--------------|--------------------------|------|
| 64.4         | Boise St vs Fresno State | 66.7 |

| QB RUSH YARDS / GAME |                          |    |
|----------------------|--------------------------|----|
| --                   | Boise St vs Fresno State | -- |

| PASSING EXPLOSIVENESS |            |                                  |           |                             |
|-----------------------|------------|----------------------------------|-----------|-----------------------------|
|                       | 1.19 (88)  | Boise St OFF vs Fresno State DEF | 1.12 (28) | +0.53<br>head-to-head +0.69 |
|                       | 1.67 (138) | Boise St DEF vs Fresno State OFF | 1.33 (21) |                             |

**VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS):** Each team's real Off Explosiveness vs. the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball). (Each side is measured against league average; a leaky defense now helps the offense.)

**CHUNK PLAY HAZARD:** The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

| INTERCEPTIONS / GAME |                                  |      |
|----------------------|----------------------------------|------|
| 0.00                 | Boise St OFF vs Fresno State DEF | --   |
| --                   | Boise St DEF vs Fresno State OFF | 0.20 |

| RUSHING GAME                |            |                                  |            |                             |
|-----------------------------|------------|----------------------------------|------------|-----------------------------|
| RUSH YARDS / GAME           |            |                                  |            |                             |
| +42.3<br>head-to-head +57.6 | 202.0 (24) | Boise St OFF vs Fresno State DEF | 143.4 (59) |                             |
|                             | 134.0 (51) | Boise St DEF vs Fresno State OFF | 153.8 (64) |                             |
| RUSH YARDS / ATTEMPT        |            |                                  |            |                             |
|                             | 4.9 (28)   | Boise St OFF vs Fresno State DEF | 4.1 (56)   | +1.24<br>head-to-head +0.60 |
|                             | 5.1 (113)  | Boise St DEF vs Fresno State OFF | 4.5 (47)   |                             |

**PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY):** Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE GROUND POUND:** This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

| TFL / GAME |                                  |          |
|------------|----------------------------------|----------|
| 0.00 (1)   | Boise St OFF vs Fresno State DEF | 4.4 (46) |
| 5.2 (25)   | Boise St DEF vs Fresno State OFF | 0.00 (1) |

**BACKFIELD DEMOLITION:** Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

## THE TRENCHES (O-LINE VS D-LINE)

| LINE YARDS |           |                                  |            |
|------------|-----------|----------------------------------|------------|
| +1.24      | 3.5 (24)  | Boise St OFF vs Fresno State DEF | 2.88 (74)  |
|            | 2.59 (28) | Boise St DEF vs Fresno State OFF | 2.51 (133) |

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

**THE HEAVY ARTILLERY TRENCH WAR:** This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

| POWER SUCCESS RATE          |           |                                  |            |
|-----------------------------|-----------|----------------------------------|------------|
| -2.38<br>head-to-head +19.4 | 0.78 (47) | Boise St OFF vs Fresno State DEF | 0.64 (31)  |
|                             | 0.75 (85) | Boise St DEF vs Fresno State OFF | 0.47 (135) |

**4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE):** Each team's real Off Power Success % vs. the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall. (Each side is measured against league average; a leaky defense now helps the offense.)

**4TH AND INCHES MANHOOD TEST:** It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

| STUFF RATE |           |                                  |            |
|------------|-----------|----------------------------------|------------|
| +18.3      | 0.14 (34) | Boise St OFF vs Fresno State DEF | 0.21 (42)  |
|            | 0.27 (7)  | Boise St DEF vs Fresno State OFF | 0.27 (136) |

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

**THE DRIVE KILLER:** The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

| HAVOC RATE                  |           |                                  |           |
|-----------------------------|-----------|----------------------------------|-----------|
| +5.53<br>head-to-head +8.20 | 0.09 (7)  | Boise St OFF vs Fresno State DEF | 0.16 (68) |
|                             | 0.20 (20) | Boise St DEF vs Fresno State OFF | 0.13 (45) |

**THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA):** Each team's real Off Havoc allowed vs. the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk). (Each side is measured against league average; a leaky defense now helps the offense.)

**THE CHAOS FACTOR:** Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

| 2ND LEVEL YARDS             |           |                                  |            |
|-----------------------------|-----------|----------------------------------|------------|
| -0.08<br>head-to-head +0.19 | 1.02 (95) | Boise St OFF vs Fresno State DEF | 1.01 (82)  |
|                             | 0.91 (45) | Boise St DEF vs Fresno State OFF | 0.93 (116) |

**2ND LEVEL DELTA (THE FRONT-7 MATCHUP):** Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) vs. the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = a better-than-average run game and/or a leakier-than-average front (expect chunk plays); negative = the linebacker corps is a real bottleneck that suppresses it. (Each side is measured against league average; a leaky defense now helps the offense.)

**LINEBACKER EVASION:** This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

| OPEN FIELD YARDS |            |                                  |           |
|------------------|------------|----------------------------------|-----------|
|                  | 1.37 (57)  | Boise St OFF vs Fresno State DEF | 1.28 (94) |
|                  | 2.24 (136) | Boise St DEF vs Fresno State OFF | 1.70 (25) |

+1.58  
head-to-head +1.29

**OPEN FIELD DELTA (THE SECONDARY MATCHUP):** Each team's real Off Open Field Yards/Carry (11+ yards past the line) vs. the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat. (Each side is measured against league average; a leaky defense now helps the offense.)

**THE BREAKOUT GEIGER COUNTER:** Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

### ADVANCED RATINGS (F+/FEI/DSR/PPA)

|           |      |            |
|-----------|------|------------|
| 0.85 (29) | F+   | 0.07 (63)  |
| 0.99 (24) | OF+  | -0.47 (91) |
| 0.52 (40) | DF+  | 0.59 (37)  |
| 0.60 (24) | FEI  | -0.03 (64) |
| 0.30 (20) | OFEI | -0.27 (94) |
| 0.24 (35) | DFEI | 0.20 (41)  |

**THE BRAIN TRUST POWER RANKINGS:** Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

### NET EFFICIENCY DELTA (THE VEGAS FILTER)

**+0.61**

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

### FEI DELTA

**+0.63**

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

|           |                         |            |
|-----------|-------------------------|------------|
| 0.18 (27) | NET SUCCESS RATE        | 0.23 (21)  |
| 0.57 (16) | OFF SUCCESS RATE (OSR)  | 0.49 (41)  |
| 0.40 (61) | OPP SUCCESS RATE (DSR)  | 0.26 (14)  |
| 0.49 (23) | OFF SUCCESS RATE (CFBD) | 0.38 (121) |
| 0.35 (23) | DEF SUCCESS RATE (CFBD) | 0.40 (79)  |

**DOWN-TO-DOWN CONSISTENCY:** This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

### NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. NSR is already each team's own net number (Off Success Rate minus Def Success Rate allowed), so this delta is the gap between two already-net values, not a single raw stat gap -- its real range runs far wider than a typical single-stat delta. Scale (recalibrated 2026-09-29 against a real 54-game week, where 19 of 54 games exceeded the old top bucket; rescaled again 2026-09-30 to real plain NSR units -- same real evidence, no longer a percentage-point conversion, see module docstring): 0-0.10 Even Clash, 0.101-0.25 Script Control, 0.251-0.45 Total Monopoly, 0.451+ Annihilation (full mismatch).

**-0.05**

### 'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

**+0.04**

head-to-head +0.05

**'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE):** Each team's real Off Success Rate (OSR) vs. the opposing Def Success Rate allowed (DSR). Scale (2026-09-30, rescaled to real plain OSR/DSR units -- no longer a percentage-point conversion, see module docstring): greater than +0.05 Ground Dominance, 0.0-0.05 Hard-Nosed Chipping, less than 0.0 Behind the Chains. (Each side is measured against league average; a leaky defense now helps the offense.)

|           |                 |            |
|-----------|-----------------|------------|
| 0.30 (18) | OFF PPA         | 0.11 (85)  |
| 0.00 (50) | DEF PPA ALLOWED | -0.07 (20) |

**THE VALUE ADDED:** Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

### PASSING DOWN PANIC INDEX (PPA)

**+0.02**

head-to-head +0.12

**PASSING DOWN PANIC INDEX (PPA):** Each team's real Off PPA vs. the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk. (Each side is measured against league average; a leaky defense now helps the offense.)
