

COLLEGE FOOTBALL METRIC MATCHUP SYMMETRY

STAT-WEIGHTED WIN PREDICTION MODEL

Backtested against **96** completed game(s) on record (96 produced a decided pick) -- **88/96 = 91.7%** accuracy (target: 80%).

● On each matchup page below, the team name highlighted turquoise is this exact model's pick (its included stats, weighted as shown, net out in that team's favor) -- not the separate, not-yet-backtested projected-score forecast further down each page.

● ORANGE instead of turquoise means the same pick, flagged: Def Sacks/Game (this team's season-long pass-rush production vs the other side's) favors the OTHER team instead. Tested against every decided game on record so far -- when the pick and Def Sacks/Game agree (or Def Sacks/Game has no real data either way), the model is 60/64 (93.8%); when they disagree, it's 28/32 (87.5%). Still the pick, just a real reason for extra caution.
