

CFB DEEP-DIVE MATCHUP REPORT -- Week 5, 2026 season. Every number below is a real, live-pulled stat (TeamRankings / ESPN / bcftoys / CFBD) as of this run, graded against this week's real, computed FBS-wide average -- not a placeholder. Rank in parentheses is each team's real FBS-wide rank for that stat. Team name in turquoise = the tuned stat-vote model's real pick for that game; orange = that pick is flagged risky (Def Sacks/Game disagrees with it).

FPI 8.9

Virginia Tech 28.5 - Pittsburgh 20.3 (65% Virginia Tech)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN				
PLAYS / GAME				
Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	70.3	Pittsburgh OFF vs Virginia Tech DEF	63.0	-11.1
	63.3	Pittsburgh DEF vs Virginia Tech OFF	81.7	
POINTS / GAME				
Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.	32.7 (33)	Pittsburgh OFF vs Virginia Tech DEF	20.3 (37)	-9.60
	11.3 (5)	Pittsburgh DEF vs Virginia Tech OFF	33.3 (30)	
YARDS / GAME				
Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.	443.0 (21)	Pittsburgh OFF vs Virginia Tech DEF	331.3 (39)	-17.9
	280.7 (17)	Pittsburgh DEF vs Virginia Tech OFF	410.3 (41)	
YARDS / PLAY				
+0.40	6.3 (29)	Pittsburgh OFF vs Virginia Tech DEF	5.3 (62)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	4.4 (15)	Pittsburgh DEF vs Virginia Tech OFF	5.0 (89)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+9.01	+5.89

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	81.8 (88)	Pittsburgh OFF vs Virginia Tech DEF	100.0 (119)	-34.9
	83.3 (52)	Pittsburgh DEF vs Virginia Tech OFF	100.0 (1)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.	44.7 (35)	Pittsburgh OFF vs Virginia Tech DEF	34.2 (39)	-5.62
	30.0 (16)	Pittsburgh DEF vs Virginia Tech OFF	46.1 (31)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME
PASS YARDS / GAME

+52.7	271.7 (31)	Pittsburgh OFF vs Virginia Tech DEF	219.0 (56)	+42.7
	220.0 (59)	Pittsburgh DEF vs Virginia Tech OFF	262.7 (44)	

PASS YARDS / ATTEMPT				
+0.90	8.5 (29)	Pittsburgh OFF vs Virginia Tech DEF	7.6 (75)	+0.20
	6.5 (38)	Pittsburgh DEF vs Virginia Tech OFF	6.7 (86)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
86.4 (23)	Pittsburgh vs Virginia Tech	85.5 (25)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
68.4 (31)	Pittsburgh OFF vs Virginia Tech DEF	63.7 (84)
73.0 (103)	Pittsburgh DEF vs Virginia Tech OFF	65.4 (38)

SACKS ALLOWED / GAME				
-6.95	1.30 (36)	Pittsburgh OFF vs Virginia Tech DEF	4.0 (3)	-3.45
	2.70 (27)	Pittsburgh DEF vs Virginia Tech OFF	2.30 (86)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
64.6	Pittsburgh vs Virginia Tech	72.0
QB RUSH YARDS / GAME		
--	Pittsburgh vs Virginia Tech	--

PASSING EXPLOSIVENESS				
-0.06	1.25 (59)	Pittsburgh OFF vs Virginia Tech DEF	1.31 (99)	-0.17
	1.38 (118)	Pittsburgh DEF vs Virginia Tech OFF	1.20 (82)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.30	Pittsburgh OFF vs Virginia Tech DEF	--
--	Pittsburgh DEF vs Virginia Tech OFF	0.00

RUSHING GAME				
RUSH YARDS / GAME				
+59.0	171.3 (41)	Pittsburgh OFF vs Virginia Tech DEF	112.3 (34)	+87.0
	60.7 (4)	Pittsburgh DEF vs Virginia Tech OFF	147.7 (68)	
RUSH YARDS / ATTEMPT				
+0.90	4.6 (39)	Pittsburgh OFF vs Virginia Tech DEF	3.7 (47)	+1.50
	2.20 (6)	Pittsburgh DEF vs Virginia Tech OFF	3.7 (86)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Pittsburgh OFF vs Virginia Tech DEF	8.5 (1)
4.8 (40)	Pittsburgh DEF vs Virginia Tech OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS			
+1.11	3.3 (39)	Pittsburgh OFF vs Virginia Tech DEF	0.99 (1)
	1.78 (2)	Pittsburgh DEF vs Virginia Tech OFF	2.99 (87)

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE			
+6.02	0.63 (113)	Pittsburgh OFF vs Virginia Tech DEF	0.57 (16)
	0.54 (12)	Pittsburgh DEF vs Virginia Tech OFF	0.75 (64)

+21.2

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE			
How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.18 (88)	Pittsburgh OFF vs Virginia Tech DEF	0.40 (1)
	0.32 (2)	Pittsburgh DEF vs Virginia Tech OFF	0.20 (102)

-10.1

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE			
-17.1	0.10 (13)	Pittsburgh OFF vs Virginia Tech DEF	0.27 (1)
	0.18 (45)	Pittsburgh DEF vs Virginia Tech OFF	0.11 (24)

-6.80

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS			
+0.41	1.26 (37)	Pittsburgh OFF vs Virginia Tech DEF	0.85 (37)
	0.81 (30)	Pittsburgh DEF vs Virginia Tech OFF	1.10 (77)

+0.29

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS			
+0.02	1.34 (57)	Pittsburgh OFF vs Virginia Tech DEF	1.31 (101)
	0.48 (23)	Pittsburgh DEF vs Virginia Tech OFF	1.21 (66)

+0.73

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

1.00 (24)	F+	0.62 (41)
0.64 (37)	OF+	0.72 (32)
1.21 (17)	DF+	0.34 (48)
0.55 (25)	FEI	0.18 (51)
0.12 (41)	OFEI	0.14 (37)
0.40 (17)	DFEI	-0.02 (78)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.40

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.37

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.29 (15)	NET SUCCESS RATE	0.31 (13)
0.50 (42)	OFF SUCCESS RATE (OSR)	0.57 (18)
0.21 (5)	OPP SUCCESS RATE (DSR)	0.26 (14)
0.50 (26)	OFF SUCCESS RATE (CFBD)	0.48 (35)
0.29 (2)	DEF SUCCESS RATE (CFBD)	0.33 (17)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-2.00

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+24.2

+36.4

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.29 (25)	OFF PPA	0.24 (42)
-0.11 (17)	DEF PPA ALLOWED	-0.03 (37)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.32

+0.35

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.11 (10)	Liberty OFF vs Delaware DEF	0.15 (114)	-3.44
	0.21 (48)	Liberty DEF vs Delaware OFF	0.21 (111)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-3.70	0.15 (78)	Liberty OFF vs Delaware DEF	0.18 (35)	+2.60
	0.19 (29)	Liberty DEF vs Delaware OFF	0.21 (135)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.33	1.26 (36)	Liberty OFF vs Delaware DEF	0.92 (57)	-0.19
	1.14 (106)	Liberty DEF vs Delaware OFF	0.95 (111)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+0.77	1.19 (67)	Liberty OFF vs Delaware DEF	0.42 (16)	-1.07
	1.59 (116)	Liberty DEF vs Delaware OFF	0.51 (130)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

-0.02 (68)	F+	-0.91 (110)
------------	----	-------------

0.18 (59)	OF+	-0.79 (106)
-0.28 (82)	DF+	-0.94 (106)
-0.17 (76)	FEI	-0.66 (112)
0.02 (56)	OFEI	-0.39 (107)
-0.22 (100)	DFEI	-0.29 (111)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.48

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.49

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.19 (26)	NET SUCCESS RATE	-0.14 (101)
0.57 (18)	OFF SUCCESS RATE (OSR)	0.25 (117)
0.39 (52)	OPP SUCCESS RATE (DSR)	0.39 (53)
0.46 (50)	OFF SUCCESS RATE (CFBD)	0.39 (114)
0.36 (37)	DEF SUCCESS RATE (CFBD)	0.39 (65)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+32.4

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+18.4

-13.5

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.12 (81)	OFF PPA	0.04 (113)
0.04 (71)	DEF PPA ALLOWED	0.08 (78)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.04

-0.00

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

FPI 11.2

Penn State 29.2 - Northwestern 19.9 (67% Penn State)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	67.5	Penn State OFF vs Northwestern DEF	67.0	-6.00
	61.0	Penn State DEF vs Northwestern OFF	67.5	

POINTS / GAME

Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.	36.8 (14)	Penn State OFF vs Northwestern DEF	18.0 (27)	-1.70
	11.5 (6)	Penn State DEF vs Northwestern OFF	32.0 (36)	

YARDS / GAME

Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.	427.3 (30)	Penn State OFF vs Northwestern DEF	410.0 (89)	-124.7
	239.5 (5)	Penn State DEF vs Northwestern OFF	381.5 (58)	

YARDS / PLAY

Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.	6.3 (29)	Penn State OFF vs Northwestern DEF	6.1 (97)	-1.60
	3.9 (5)	Penn State DEF vs Northwestern OFF	5.7 (51)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+0.92	+6.93

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

+13.3	80.0 (94)	Penn State OFF vs Northwestern DEF	66.7 (7)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	100.0 (119)	Penn State DEF vs Northwestern OFF	100.0 (1)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.	40.4 (58)	Penn State OFF vs Northwestern DEF	48.1 (117)	-26.8
	18.5 (1)	Penn State DEF vs Northwestern OFF	37.5 (77)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

+59.3	243.8 (51)	Penn State OFF vs Northwestern DEF	184.5 (33)	+140.7
	126.3 (4)	Penn State DEF vs Northwestern OFF	267.0 (36)	

PASS YARDS / ATTEMPT

+2.50	8.9 (23)	Penn State OFF vs Northwestern DEF	6.4 (33)	+5.80
	4.5 (1)	Penn State DEF vs Northwestern OFF	10.3 (4)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
64.6 (78)	Penn State vs Northwestern	81.3 (39)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
54.9 (56)	Penn State OFF vs Northwestern DEF	72.4 (99)
88.0 (131)	Penn State DEF vs Northwestern OFF	80.4 (14)

SACKS ALLOWED / GAME				
-11.0	1.30 (36)	Penn State OFF vs Northwestern DEF	1.50 (84)	-9.29
	1.50 (84)	Penn State DEF vs Northwestern OFF	2.50 (101)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
62.4	Penn State vs Northwestern	75.0
QB RUSH YARDS / GAME		
--	Penn State vs Northwestern	--

PASSING EXPLOSIVENESS				
+0.18	1.30 (41)	Penn State OFF vs Northwestern DEF	1.12 (31)	+0.12
	1.17 (47)	Penn State DEF vs Northwestern OFF	1.29 (44)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.30	Penn State OFF vs Northwestern DEF	--
--	Penn State DEF vs Northwestern OFF	0.00

RUSHING GAME				
--------------	--	--	--	--

RUSH YARDS / GAME				
-42.0	183.5 (32)	Penn State OFF vs Northwestern DEF	225.5 (129)	+1.20
	113.3 (36)	Penn State DEF vs Northwestern OFF	114.5 (99)	

RUSH YARDS / ATTEMPT				
-1.50	4.7 (35)	Penn State OFF vs Northwestern DEF	6.2 (134)	-0.70
	3.6 (42)	Penn State DEF vs Northwestern OFF	2.90 (119)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Penn State OFF vs Northwestern DEF	3.0 (90)

3.8 (67)	Penn State DEF vs Northwestern OFF	0.00 (1)
----------	------------------------------------	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.	2.84 (103)	Penn State OFF vs Northwestern DEF	3.4 (130)	-0.90
	2.53 (33)	Penn State DEF vs Northwestern OFF	2.83 (104)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+13.6	0.73 (80)	Penn State OFF vs Northwestern DEF	0.59 (22)	+15.2
	0.67 (44)	Penn State DEF vs Northwestern OFF	0.82 (27)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+3.37	0.14 (34)	Penn State OFF vs Northwestern DEF	0.14 (121)	How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.
	0.23 (30)	Penn State DEF vs Northwestern OFF	0.19 (92)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-4.60	0.12 (33)	Penn State OFF vs Northwestern DEF	0.16 (66)	-6.20
	0.20 (25)	Penn State DEF vs Northwestern OFF	0.13 (55)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

-0.04	1.01 (97)	Penn State OFF vs Northwestern DEF	1.06 (90)	+0.35
	0.77 (23)	Penn State DEF vs Northwestern OFF	1.12 (67)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

-0.92	0.97 (87)	Penn State OFF vs Northwestern DEF	1.89 (130)	+0.55
	0.85 (63)	Penn State DEF vs Northwestern OFF	1.40 (52)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Notre Dame OFF vs North Carolina DEF	4.7 (45)

6.0 (15)	Notre Dame DEF vs North Carolina OFF	0.00 (1)
----------	--------------------------------------	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.	2.94 (93)	Notre Dame OFF vs North Carolina DEF	2.94 (87)	-1.55
	2.32 (16)	Notre Dame DEF vs North Carolina OFF	3.9 (5)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-11.3	0.76 (59)	Notre Dame OFF vs North Carolina DEF	0.88 (127)	+4.44
	0.73 (77)	Notre Dame DEF vs North Carolina OFF	0.78 (49)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+12.9	0.15 (53)	Notre Dame OFF vs North Carolina DEF	0.12 (131)	How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.
	0.22 (34)	Notre Dame DEF vs North Carolina OFF	0.12 (20)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-4.00	0.10 (16)	Notre Dame OFF vs North Carolina DEF	0.14 (99)	-10.8
	0.24 (4)	Notre Dame DEF vs North Carolina OFF	0.13 (50)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.00	0.76 (132)	Notre Dame OFF vs North Carolina DEF	0.76 (19)	+1.02
	0.57 (7)	Notre Dame DEF vs North Carolina OFF	1.59 (3)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

-0.49	0.61 (122)	Notre Dame OFF vs North Carolina DEF	1.09 (83)	+0.58
	0.22 (3)	Notre Dame DEF vs North Carolina OFF	0.81 (108)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

2.24 (2)	F+	0.03 (65)
1.92 (4)	OF+	-0.28 (83)
2.23 (1)	DF+	0.32 (50)
1.50 (2)	FEI	-0.12 (71)
0.61 (5)	OFEI	-0.13 (76)
0.83 (1)	DFEI	0.00 (71)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+1.57

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+1.62

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.51 (1)	NET SUCCESS RATE	0.07 (52)
0.69 (4)	OFF SUCCESS RATE (OSR)	0.43 (68)
0.18 (2)	OPP SUCCESS RATE (DSR)	0.36 (47)
0.52 (13)	OFF SUCCESS RATE (CFBD)	0.48 (36)
0.34 (24)	DEF SUCCESS RATE (CFBD)	0.39 (69)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+44.3

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+32.6

+24.7

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.33 (13)	OFF PPA	0.12 (85)
-0.12 (15)	DEF PPA ALLOWED	-0.02 (41)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.35

+0.24

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

PASS YARDS / GAME

-163.3	144.0 (127)	UCF OFF vs Houston DEF	307.3 (129)	+7.70
	268.0 (112)	UCF DEF vs Houston OFF	275.7 (27)	

PASS YARDS / ATTEMPT

-1.60	6.4 (98)	UCF OFF vs Houston DEF	8.0 (93)	+2.30
	6.8 (51)	UCF DEF vs Houston OFF	9.1 (20)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
42.4 (123)	UCF vs Houston	89.5 (14)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
47.6 (69)	UCF OFF vs Houston DEF	53.8 (56)
78.7 (118)	UCF DEF vs Houston OFF	83.6 (9)

SACKS ALLOWED / GAME				
-6.46	2.00 (67)	UCF OFF vs Houston DEF	2.30 (39)	-10.2
	2.30 (39)	UCF DEF vs Houston OFF	1.30 (36)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
67.7	UCF vs Houston	70.3
QB RUSH YARDS / GAME		
--	UCF vs Houston	--

PASSING EXPLOSIVENESS				
-0.15	1.21 (80)	UCF OFF vs Houston DEF	1.36 (111)	-0.15
	1.27 (91)	UCF DEF vs Houston OFF	1.12 (117)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME

Pass 41% / Rush 59%

West Virginia 28.1 - Iowa State 25.9 (54% West Virginia)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

+27.7	79.0	West Virginia OFF vs Iowa State DEF	57.3	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	70.0	West Virginia DEF vs Iowa State OFF	64.0	

POINTS / GAME

+15.4	31.0 (43)	West Virginia OFF vs Iowa State DEF	18.0 (27)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	30.7 (87)	West Virginia DEF vs Iowa State OFF	28.3 (59)	

YARDS / GAME

+248.7	439.0 (25)	West Virginia OFF vs Iowa State DEF	293.7 (24)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	462.7 (124)	West Virginia DEF vs Iowa State OFF	359.3 (76)	

YARDS / PLAY

+1.50	5.6 (57)	West Virginia OFF vs Iowa State DEF	5.1 (52)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	6.6 (116)	West Virginia DEF vs Iowa State OFF	5.6 (57)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+11.2	+43.1

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	80.0 (94)	West Virginia OFF vs Iowa State DEF	83.3 (52)	-20.0
	83.3 (52)	West Virginia DEF vs Iowa State OFF	100.0 (1)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+20.0	49.0 (20)	West Virginia OFF vs Iowa State DEF	27.0 (9)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	27.8 (11)	West Virginia DEF vs Iowa State OFF	29.7 (114)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

-13.0	151.3 (122)	West Virginia OFF vs Iowa State DEF	164.3 (16)	-165.0
	319.7 (133)	West Virginia DEF vs Iowa State OFF	154.7 (120)	

PASS YARDS / ATTEMPT

+2.40	8.6 (27)	West Virginia OFF vs Iowa State DEF	6.2 (25)	-3.90
	9.9 (130)	West Virginia DEF vs Iowa State OFF	6.0 (113)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
90.7 (10)	West Virginia vs Iowa State	70.0 (68)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
70.1 (26)	West Virginia OFF vs Iowa State DEF	72.0 (97)
46.8 (44)	West Virginia DEF vs Iowa State OFF	52.9 (59)

SACKS ALLOWED / GAME				
-12.8	2.00 (67)	West Virginia OFF vs Iowa State DEF	0.30 (135)	-10.6
	2.70 (27)	West Virginia DEF vs Iowa State OFF	0.70 (8)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
58.5	West Virginia vs Iowa State	55.8

QB RUSH YARDS / GAME		
--	West Virginia vs Iowa State	--

PASSING EXPLOSIVENESS				
+0.11	1.21 (81)	West Virginia OFF vs Iowa State DEF	1.09 (26)	+0.15
	1.18 (50)	West Virginia DEF vs Iowa State OFF	1.33 (24)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.30	West Virginia OFF vs Iowa State DEF	--
--	West Virginia DEF vs Iowa State OFF	1.00

RUSHING GAME

RUSH YARDS / GAME				
+158.4	287.7 (1)	West Virginia OFF vs Iowa State DEF	129.3 (54)	+61.7
	143.0 (63)	West Virginia DEF vs Iowa State OFF	204.7 (24)	

RUSH YARDS / ATTEMPT				
+0.60	4.8 (30)	West Virginia OFF vs Iowa State DEF	4.2 (69)	+1.30
	4.1 (64)	West Virginia DEF vs Iowa State OFF	5.4 (16)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	West Virginia OFF vs Iowa State DEF	4.5 (46)

4.5 (46)	West Virginia DEF vs Iowa State OFF	0.00 (1)
----------	-------------------------------------	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS				
+0.58	3.2 (50)	West Virginia OFF vs Iowa State DEF	2.58 (40)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	2.90 (76)	West Virginia DEF vs Iowa State OFF	2.99 (89)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE				
+2.00	0.72 (85)	West Virginia OFF vs Iowa State DEF	0.70 (58)	-12.3
	0.71 (63)	West Virginia DEF vs Iowa State OFF	0.58 (121)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE				
How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.14 (33)	West Virginia OFF vs Iowa State DEF	0.20 (62)	-5.06
	0.20 (57)	West Virginia DEF vs Iowa State OFF	0.19 (93)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE				
-6.60	0.11 (24)	West Virginia OFF vs Iowa State DEF	0.18 (52)	+1.60
	0.15 (84)	West Virginia DEF vs Iowa State OFF	0.17 (108)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS				
+0.27	1.01 (98)	West Virginia OFF vs Iowa State DEF	0.74 (17)	+0.03
	1.08 (96)	West Virginia DEF vs Iowa State OFF	1.11 (72)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS				
+0.48	1.52 (40)	West Virginia OFF vs Iowa State DEF	1.05 (79)	+0.37
	1.15 (90)	West Virginia DEF vs Iowa State OFF	1.52 (41)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.03 (65)	F+	0.58 (44)
0.43 (46)	OF+	0.18 (59)
-0.35 (87)	DF+	0.75 (32)
-0.04 (67)	FEI	0.56 (24)
0.06 (48)	OFEI	0.16 (34)
-0.06 (82)	DFEI	0.29 (30)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.45

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.60

-0.02 (76)	NET SUCCESS RATE	0.04 (58)
0.44 (64)	OFF SUCCESS RATE (OSR)	0.40 (76)
0.46 (86)	OPP SUCCESS RATE (DSR)	0.35 (43)
0.45 (60)	OFF SUCCESS RATE (CFBD)	0.38 (118)
0.44 (109)	DEF SUCCESS RATE (CFBD)	0.37 (51)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-6.10

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+8.60

-5.70

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.18 (61)	OFF PPA	0.12 (87)
0.12 (96)	DEF PPA ALLOWED	-0.04 (35)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.22

-0.01

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS				
-0.14	0.73 (134)	Stanford OFF vs Wake Forest DEF	0.88 (44)	-0.08
	1.19 (115)	Stanford DEF vs Wake Forest OFF	1.11 (70)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS				
-0.01	0.69 (118)	Stanford OFF vs Wake Forest DEF	0.70 (44)	-0.19
	1.38 (105)	Stanford DEF vs Wake Forest OFF	1.19 (68)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

-0.60 (99)	F+	0.39 (53)
-0.46 (89)	OF+	0.46 (44)
-0.66 (96)	DF+	0.32 (50)
-0.38 (91)	FEI	0.31 (44)
-0.18 (87)	OFEI	0.14 (37)
-0.20 (93)	DFEI	0.21 (37)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.73

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.69

-0.13 (99)	NET SUCCESS RATE	0.08 (48)
0.36 (91)	OFF SUCCESS RATE (OSR)	0.57 (22)
0.49 (92)	OPP SUCCESS RATE (DSR)	0.49 (92)
0.39 (111)	OFF SUCCESS RATE (CFBD)	0.45 (57)
0.46 (121)	DEF SUCCESS RATE (CFBD)	0.47 (126)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-20.9

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-12.9

+8.00

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.13 (79)	OFF PPA	0.28 (31)
0.28 (132)	DEF PPA ALLOWED	0.16 (110)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

-0.03

-0.00

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

	5.0 (111)	Syracuse DEF vs UConn OFF	4.1 (66)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Syracuse OFF vs UConn DEF	4.0 (61)
5.7 (22)	Syracuse DEF vs UConn OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

2.85 (101)

Syracuse OFF vs UConn DEF

2.65 (52)

-0.41

2.63 (49)

Syracuse DEF vs UConn OFF

3.2 (51)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+18.9

0.80 (34)

Syracuse OFF vs UConn DEF

0.61 (28)

-8.33

0.75 (82)

Syracuse DEF vs UConn OFF

0.67 (101)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+7.38

0.22 (120)

Syracuse OFF vs UConn DEF

0.21 (47)

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.23 (28)

Syracuse DEF vs UConn OFF

0.17 (69)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-4.30

0.13 (42)

Syracuse OFF vs UConn DEF

0.17 (60)

-5.90

0.19 (32)

Syracuse DEF vs UConn OFF

0.13 (44)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.56

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.62	3.2 (64)	Michigan OFF vs Minnesota DEF	2.68 (54)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	2.63 (48)	Michigan DEF vs Minnesota OFF	2.50 (133)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+17.9	0.75 (64)	Michigan OFF vs Minnesota DEF	0.57 (16)	-7.43
	0.71 (67)	Michigan DEF vs Minnesota OFF	0.64 (110)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.13 (21)	Michigan OFF vs Minnesota DEF	0.27 (8)	-16.2
	0.22 (35)	Michigan DEF vs Minnesota OFF	0.24 (131)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-10.3	0.13 (60)	Michigan OFF vs Minnesota DEF	0.24 (6)	-3.50
	0.18 (49)	Michigan DEF vs Minnesota OFF	0.14 (71)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

-0.21	0.80 (130)	Michigan OFF vs Minnesota DEF	1.01 (78)	+0.03
	0.80 (26)	Michigan DEF vs Minnesota OFF	0.83 (127)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

-0.11	0.46 (132)	Michigan OFF vs Minnesota DEF	0.58 (31)	+1.16
	0.20 (2)	Michigan DEF vs Minnesota OFF	1.35 (55)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

1.08 (18)	F+	0.40 (52)
-----------	----	-----------

0.65 (36)	OF+	0.04 (66)
1.43 (13)	DF+	0.61 (36)
0.68 (18)	FEI	0.18 (51)
0.28 (22)	OFEI	-0.09 (71)
0.40 (17)	DFEI	0.19 (41)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.58

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.50

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.12 (39)	NET SUCCESS RATE	0.09 (46)
0.39 (82)	OFF SUCCESS RATE (OSR)	0.42 (70)
0.27 (17)	OPP SUCCESS RATE (DSR)	0.33 (33)
0.43 (77)	OFF SUCCESS RATE (CFBD)	0.47 (47)
0.31 (9)	DEF SUCCESS RATE (CFBD)	0.37 (50)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+3.00

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+5.20

+15.1

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.16 (65)	OFF PPA	0.13 (80)
-0.09 (21)	DEF PPA ALLOWED	0.04 (72)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.12

+0.22

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Navy OFF vs Air Force DEF

8.4 (101)

-0.90

10.6 (137)

Navy DEF vs Air Force OFF

9.7 (13)

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
78.1 (49)	Navy vs Air Force	74.6 (55)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
41.7 (85)	Navy OFF vs Air Force DEF	41.1 (27)
23.0 (4)	Navy DEF vs Air Force OFF	52.3 (61)

SACKS ALLOWED / GAME				
-1.02	4.0 (132)	Navy OFF vs Air Force DEF	2.00 (58)	-13.3
	3.5 (13)	Navy DEF vs Air Force OFF	1.00 (19)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
37.1	Navy vs Air Force	50.0
QB RUSH YARDS / GAME		
--	Navy vs Air Force	--

PASSING EXPLOSIVENESS				
-0.29	1.14 (113)	Navy OFF vs Air Force DEF	1.43 (129)	-0.32
	1.41 (124)	Navy DEF vs Air Force OFF	1.08 (128)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.50	Navy OFF vs Air Force DEF	--
--	Navy DEF vs Air Force OFF	1.00

RUSHING GAME				
RUSH YARDS / GAME				
+81.0	247.5 (7)	Navy OFF vs Air Force DEF	166.5 (91)	+206.0
	79.0 (9)	Navy DEF vs Air Force OFF	285.0 (2)	
RUSH YARDS / ATTEMPT				
+0.70	5.3 (18)	Navy OFF vs Air Force DEF	4.6 (88)	+2.70
	2.00 (4)	Navy DEF vs Air Force OFF	4.7 (35)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Navy OFF vs Air Force DEF	3.0 (90)
6.0 (15)	Navy DEF vs Air Force OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

	7.8 (79)	Michigan State DEF vs Wisconsin OFF	8.1 (42)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
70.1 (67)	Michigan State vs Wisconsin	50.6 (108)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
46.3 (72)	Michigan State OFF vs Wisconsin DEF	72.6 (102)
60.8 (73)	Michigan State DEF vs Wisconsin OFF	53.8 (57)

SACKS ALLOWED / GAME				
-13.5	3.8 (131)	Michigan State OFF vs Wisconsin DEF	1.70 (75)	-16.6
	1.80 (72)	Michigan State DEF vs Wisconsin OFF	1.00 (19)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
67.9	Michigan State vs Wisconsin	59.4
QB RUSH YARDS / GAME		
--	Michigan State vs Wisconsin	--

PASSING EXPLOSIVENESS				
+0.04	1.08 (129)	Michigan State OFF vs Wisconsin DEF	1.04 (13)	+0.16
	1.23 (72)	Michigan State DEF vs Wisconsin OFF	1.39 (18)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME

0.15 (87)

Michigan State DEF vs Wisconsin OFF

0.16 (95)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.13

0.90 (118)

Michigan State OFF vs Wisconsin DEF

0.77 (22)

-0.20

1.01 (77)

Michigan State DEF vs Wisconsin OFF

0.81 (128)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+0.30

0.62 (121)

Michigan State OFF vs Wisconsin DEF

0.32 (9)

+0.13

1.01 (74)

Michigan State DEF vs Wisconsin OFF

1.14 (73)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.10 (60)	F+	0.67 (36)
-0.01 (68)	OF+	-0.12 (78)
0.03 (66)	DF+	1.39 (15)
0.10 (57)	FEI	0.50 (32)
-0.01 (61)	OFEI	-0.07 (65)
-0.01 (74)	DFEI	0.55 (9)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.50

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.40

0.07 (50)	NET SUCCESS RATE	0.10 (44)
0.53 (34)	OFF SUCCESS RATE (OSR)	0.41 (72)
0.46 (84)	OPP SUCCESS RATE (DSR)	0.31 (30)
0.44 (65)	OFF SUCCESS RATE (CFBD)	0.42 (87)
0.43 (96)	DEF SUCCESS RATE (CFBD)	0.34 (22)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-2.80

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+21.9

-4.10

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.03 (114)	OFF PPA	0.14 (74)
0.15 (103)	DEF PPA ALLOWED	-0.05 (30)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.08

-0.01

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Pass 49% / Rush 51%

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME				
+9.70	69.7	Vanderbilt OFF vs Georgia DEF	71.0	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	71.0	Vanderbilt DEF vs Georgia OFF	60.0	

POINTS / GAME				
Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.	28.3 (59)	Vanderbilt OFF vs Georgia DEF	16.7 (23)	-14.4
	26.0 (69)	Vanderbilt DEF vs Georgia OFF	52.0 (2)	

YARDS / GAME				
+12.6	353.0 (82)	Vanderbilt OFF vs Georgia DEF	273.7 (14)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	354.3 (51)	Vanderbilt DEF vs Georgia OFF	421.0 (35)	

YARDS / PLAY				
Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.	5.1 (81)	Vanderbilt OFF vs Georgia DEF	3.9 (5)	-0.80
	5.0 (44)	Vanderbilt DEF vs Georgia OFF	7.0 (10)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+6.84	+2.57

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	81.8 (88)	Vanderbilt OFF vs Georgia DEF	88.9 (85)	-14.2
	85.7 (61)	Vanderbilt DEF vs Georgia OFF	92.9 (37)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.	31.8 (107)	Vanderbilt OFF vs Georgia DEF	31.1 (19)	-10.9
	37.0 (58)	Vanderbilt DEF vs Georgia OFF	48.6 (24)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

+12.3	63.0	Toledo OFF vs Ball State DEF	69.0	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	77.0	Toledo DEF vs Ball State OFF	58.7	
POINTS / GAME				
+13.4	36.7 (15)	Toledo OFF vs Ball State DEF	44.3 (134)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	31.3 (96)	Toledo DEF vs Ball State OFF	10.3 (133)	
YARDS / GAME				
+100.0	434.3 (28)	Toledo OFF vs Ball State DEF	495.0 (131)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	372.7 (66)	Toledo DEF vs Ball State OFF	212.0 (136)	
YARDS / PLAY				
+0.90	6.9 (11)	Toledo OFF vs Ball State DEF	7.2 (128)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	4.8 (33)	Toledo DEF vs Ball State OFF	3.6 (133)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+7.99	+7.65

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
+17.6	90.9 (46)	Toledo OFF vs Ball State DEF	93.3 (115)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	100.0 (119)	Toledo DEF vs Ball State OFF	80.0 (94)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
+4.67	46.0 (32)	Toledo OFF vs Ball State DEF	55.3 (132)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	38.3 (64)	Toledo DEF vs Ball State OFF	24.3 (128)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME				
PASS YARDS / GAME				
+12.7	303.0 (15)	Toledo OFF vs Ball State DEF	290.3 (123)	-94.0
	219.7 (58)	Toledo DEF vs Ball State OFF	125.7 (130)	
PASS YARDS / ATTEMPT				

-0.40	9.7 (13)	Toledo OFF vs Ball State DEF	10.1 (133)	-2.60
	7.0 (57)	Toledo DEF vs Ball State OFF	4.4 (135)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
82.8 (32)	Toledo vs Ball State	47.9 (119)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
63.8 (41)	Toledo OFF vs Ball State DEF	23.9 (5)
62.9 (79)	Toledo DEF vs Ball State OFF	26.0 (117)

SACKS ALLOWED / GAME				
-15.7	0.70 (8)	Toledo OFF vs Ball State DEF	1.00 (103)	-12.1
	2.70 (27)	Toledo DEF vs Ball State OFF	2.00 (67)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
68.1	Toledo vs Ball State	54.1

QB RUSH YARDS / GAME		
--	Toledo vs Ball State	--

PASSING EXPLOSIVENESS				
+0.07	1.53 (1)	Toledo OFF vs Ball State DEF	1.46 (131)	+0.12
	1.30 (95)	Toledo DEF vs Ball State OFF	1.42 (13)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.30	Toledo OFF vs Ball State DEF	--
--	Toledo DEF vs Ball State OFF	0.30

RUSHING GAME				
RUSH YARDS / GAME				
-73.4	131.3 (80)	Toledo OFF vs Ball State DEF	204.7 (117)	-66.7
	153.0 (74)	Toledo DEF vs Ball State OFF	86.3 (126)	
RUSH YARDS / ATTEMPT				
-1.00	4.2 (62)	Toledo OFF vs Ball State DEF	5.2 (115)	-0.60
	3.6 (42)	Toledo DEF vs Ball State OFF	3.0 (118)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Toledo OFF vs Ball State DEF	4.2 (53)

4.2 (53)	Toledo DEF vs Ball State OFF	0.00 (1)
----------	------------------------------	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS				
+0.15	3.1 (74)	Toledo OFF vs Ball State DEF	3.0 (93)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	2.62 (46)	Toledo DEF vs Ball State OFF	2.54 (131)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE				
-11.1	0.67 (101)	Toledo OFF vs Ball State DEF	0.78 (98)	+50.0
	0.39 (2)	Toledo DEF vs Ball State OFF	0.89 (6)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE				
How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.17 (75)	Toledo OFF vs Ball State DEF	0.19 (78)	-2.54
	0.21 (54)	Toledo DEF vs Ball State OFF	0.21 (117)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE				
+1.70	0.14 (62)	Toledo OFF vs Ball State DEF	0.12 (127)	+6.40
	0.14 (107)	Toledo DEF vs Ball State OFF	0.20 (131)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS				
-0.17	0.95 (110)	Toledo OFF vs Ball State DEF	1.12 (102)	+0.23
	0.78 (24)	Toledo DEF vs Ball State OFF	1.01 (99)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS				
-0.97	1.16 (70)	Toledo OFF vs Ball State DEF	2.14 (132)	+0.92
	0.82 (59)	Toledo DEF vs Ball State OFF	1.74 (27)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.06 (64)	F+	-1.83 (135)
0.08 (63)	OF+	-1.70 (134)
0.10 (61)	DF+	-1.62 (134)
0.05 (59)	FEI	-1.15 (134)
0.00 (59)	OFEI	-0.59 (131)
0.08 (57)	DFEI	-0.49 (134)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+1.16

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+1.20

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.00 (70)	NET SUCCESS RATE	-0.40 (130)
0.53 (31)	OFF SUCCESS RATE (OSR)	0.23 (124)
0.53 (106)	OPP SUCCESS RATE (DSR)	0.63 (127)
0.45 (62)	OFF SUCCESS RATE (CFBD)	0.34 (132)
0.33 (15)	DEF SUCCESS RATE (CFBD)	0.45 (117)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+40.1

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-9.70

-30.0

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.27 (34)	OFF PPA	0.05 (109)
-0.02 (39)	DEF PPA ALLOWED	0.32 (135)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

-0.06

+0.07

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

2.16 (3)	F+	1.16 (17)
2.11 (2)	OF+	0.13 (61)
1.98 (4)	DF+	1.82 (7)
1.36 (3)	FEI	0.75 (15)
0.69 (2)	OFEI	-0.08 (69)
0.67 (4)	DFEI	0.65 (6)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.79

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.61

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.39 (5)	NET SUCCESS RATE	0.23 (23)
0.63 (10)	OFF SUCCESS RATE (OSR)	0.45 (62)
0.24 (11)	OPP SUCCESS RATE (DSR)	0.22 (6)
0.52 (7)	OFF SUCCESS RATE (CFBD)	0.43 (82)
0.35 (33)	DEF SUCCESS RATE (CFBD)	0.30 (4)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+15.5

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+41.3

+20.9

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.39 (8)	OFF PPA	0.17 (64)
-0.08 (23)	DEF PPA ALLOWED	-0.14 (8)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.54

+0.25

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Pass 46% / Rush 54%

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

+7.70	74.0	Florida OFF vs Missouri DEF	76.0	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	75.7	Florida DEF vs Missouri OFF	66.0	

POINTS / GAME

+30.6	54.0 (1)	Florida OFF vs Missouri DEF	23.0 (50)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	29.3 (81)	Florida DEF vs Missouri OFF	29.7 (53)	

YARDS / GAME

+207.6	539.0 (2)	Florida OFF vs Missouri DEF	358.7 (53)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	398.3 (83)	Florida DEF vs Missouri OFF	371.0 (65)	

YARDS / PLAY

+2.30	7.3 (4)	Florida OFF vs Missouri DEF	4.7 (27)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	5.3 (62)	Florida DEF vs Missouri OFF	5.6 (57)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+5.82	-68.3
-------	-------

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

+32.2	95.0 (33)	Florida OFF vs Missouri DEF	85.7 (61)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	91.7 (103)	Florida DEF vs Missouri OFF	68.8 (122)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+25.1	51.4 (12)	Florida OFF vs Missouri DEF	34.8 (42)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	45.6 (111)	Florida DEF vs Missouri OFF	37.2 (79)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

+9.00	263.7 (42)	Florida OFF vs Missouri DEF	254.7 (103)	-50.0
	281.7 (118)	Florida DEF vs Missouri OFF	231.7 (64)	

PASS YARDS / ATTEMPT

+3.40	11.0 (2)	Florida OFF vs Missouri DEF	7.6 (75)	+0.80
	6.9 (53)	Florida DEF vs Missouri OFF	7.7 (58)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
89.9 (13)	Florida vs Missouri	81.7 (38)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
88.7 (2)	Florida OFF vs Missouri DEF	71.2 (96)
65.9 (86)	Florida DEF vs Missouri OFF	48.9 (66)

SACKS ALLOWED / GAME				
-11.7	1.00 (19)	Florida OFF vs Missouri DEF	3.7 (10)	-3.41
	3.3 (14)	Florida DEF vs Missouri OFF	1.00 (19)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
72.2	Florida vs Missouri	58.9
QB RUSH YARDS / GAME		
--	Florida vs Missouri	--

PASSING EXPLOSIVENESS				
-0.11	1.30 (36)	Florida OFF vs Missouri DEF	1.41 (125)	+0.09
	1.15 (41)	Florida DEF vs Missouri OFF	1.24 (63)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.70	Florida OFF vs Missouri DEF	--
--	Florida DEF vs Missouri OFF	0.00

RUSHING GAME				
RUSH YARDS / GAME				
+171.3	275.3 (4)	Florida OFF vs Missouri DEF	104.0 (25)	+22.6
	116.7 (41)	Florida DEF vs Missouri OFF	139.3 (78)	
RUSH YARDS / ATTEMPT				
+2.90	5.6 (10)	Florida OFF vs Missouri DEF	2.70 (11)	+0.30
	3.7 (47)	Florida DEF vs Missouri OFF	4.0 (72)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Florida OFF vs Missouri DEF	5.0 (30)
5.8 (18)	Florida DEF vs Missouri OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.70	3.2 (53)	Florida OFF vs Missouri DEF	2.48 (28)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	3.0 (101)	Florida DEF vs Missouri OFF	3.1 (71)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+13.3	1.00 (1)	Florida OFF vs Missouri DEF	0.87 (125)	-2.99
	0.72 (71)	Florida DEF vs Missouri OFF	0.69 (95)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.13 (29)	Florida OFF vs Missouri DEF	0.24 (22)	-17.5
	0.11 (136)	Florida DEF vs Missouri OFF	0.17 (79)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-13.0	0.09 (10)	Florida OFF vs Missouri DEF	0.22 (9)	-3.60
	0.20 (16)	Florida DEF vs Missouri OFF	0.17 (103)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.08	1.07 (84)	Florida OFF vs Missouri DEF	0.99 (71)	+0.05
	0.92 (55)	Florida DEF vs Missouri OFF	0.97 (108)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+1.33	2.02 (14)	Florida OFF vs Missouri DEF	0.69 (42)	+0.29
	0.41 (15)	Florida DEF vs Missouri OFF	0.70 (116)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+11.7

0.87 (11)

Auburn OFF vs Tennessee DEF

0.75 (82)

+15.2

0.68 (53)

Auburn DEF vs Tennessee OFF

0.83 (22)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+0.86

0.15 (51)

Auburn OFF vs Tennessee DEF

0.19 (75)

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.19 (84)

Auburn DEF vs Tennessee OFF

0.14 (36)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-6.70

0.15 (80)

Auburn OFF vs Tennessee DEF

0.22 (10)

-1.20

0.15 (82)

Auburn DEF vs Tennessee OFF

0.14 (71)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

-0.04

1.23 (43)

Auburn OFF vs Tennessee DEF

1.27 (124)

+0.77

0.63 (10)

Auburn DEF vs Tennessee OFF

1.40 (16)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+0.56

1.46 (51)

Auburn OFF vs Tennessee DEF

0.90 (70)

+1.13

0.62 (36)

Auburn DEF vs Tennessee OFF

1.74 (26)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.84 (29)	F+	1.36 (11)
0.32 (54)	OF+	1.39 (13)
1.18 (18)	DF+	1.08 (22)
0.52 (27)	FEI	0.87 (11)
0.06 (48)	OFEI	0.42 (14)
0.38 (21)	DFEI	0.40 (17)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.38

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.35

0.03 (59)	NET SUCCESS RATE	0.17 (31)
0.46 (59)	OFF SUCCESS RATE (OSR)	0.47 (56)

Pass 54% / Rush 46%

Pass 43% / Rush 57%

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME				
+3.40	70.0	California OFF vs UNLV DEF	67.8	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	72.7	California DEF vs UNLV OFF	71.5	

POINTS / GAME				
+4.00	18.3 (101)	California OFF vs UNLV DEF	21.8 (46)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	29.0 (77)	California DEF vs UNLV OFF	21.5 (87)	

YARDS / GAME				
Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.	296.7 (116)	California OFF vs UNLV DEF	364.3 (56)	-51.8
	420.3 (97)	California DEF vs UNLV OFF	404.5 (47)	

YARDS / PLAY				
Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.	4.2 (125)	California OFF vs UNLV DEF	5.4 (69)	-1.10
	5.8 (79)	California DEF vs UNLV OFF	5.7 (51)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+19.3	+2.11

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
+31.0	100.0 (1)	California OFF vs UNLV DEF	85.7 (61)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	75.0 (26)	California DEF vs UNLV OFF	58.3 (132)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
+3.03	37.0 (81)	California OFF vs UNLV DEF	42.1 (89)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	46.5 (114)	California DEF vs UNLV OFF	38.3 (72)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME				
-7.50	206.0 (78)	California OFF vs UNLV DEF	213.5 (52)	+21.3
	203.7 (40)	California DEF vs UNLV OFF	225.0 (67)	

PASS YARDS / ATTEMPT

-1.30	5.6 (122)	California OFF vs UNLV DEF	6.9 (53)	+1.10
	6.5 (38)	California DEF vs UNLV OFF	7.6 (59)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
63.9 (79)	California vs UNLV	74.7 (54)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
47.3 (70)	California OFF vs UNLV DEF	62.2 (77)
52.0 (53)	California DEF vs UNLV OFF	31.9 (106)

SACKS ALLOWED / GAME				
-12.2	2.00 (67)	California OFF vs UNLV DEF	2.50 (36)	-13.1
	2.30 (39)	California DEF vs UNLV OFF	2.80 (111)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
57.7	California vs UNLV	58.5
QB RUSH YARDS / GAME		
---	California vs UNLV	---

PASSING EXPLOSIVENESS				
+0.04	1.19 (87)	California OFF vs UNLV DEF	1.15 (43)	-0.12
	1.34 (108)	California DEF vs UNLV OFF	1.22 (72)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
1.30	California OFF vs UNLV DEF	---
---	California DEF vs UNLV OFF	0.30

RUSHING GAME				
RUSH YARDS / GAME				
-60.1	90.7 (119)	California OFF vs UNLV DEF	150.8 (72)	-37.2
	216.7 (125)	California DEF vs UNLV OFF	179.5 (36)	
RUSH YARDS / ATTEMPT				
-1.50	2.90 (119)	California OFF vs UNLV DEF	4.4 (76)	-1.00
	5.6 (127)	California DEF vs UNLV OFF	4.6 (39)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	California OFF vs UNLV DEF	3.2 (88)

3.5 (77)

California DEF vs UNLV OFF

0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR

82.4 (33)	Louisville vs North Carolina State	74.1 (56)
-----------	------------------------------------	-----------

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY

76.7 (17)	Louisville OFF vs North Carolina State DEF	60.8 (74)
57.8 (61)	Louisville DEF vs North Carolina State OFF	68.0 (33)

SACKS ALLOWED / GAME

-13.1	2.30 (86)	Louisville OFF vs North Carolina State DEF	0.70 (119)	-13.0
	1.70 (75)	Louisville DEF vs North Carolina State OFF	1.30 (36)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %

67.0	Louisville vs North Carolina State	66.3

QB RUSH YARDS / GAME

--	Louisville vs North Carolina State	--
----	------------------------------------	----

PASSING EXPLOSIVENESS

+0.10	1.35 (22)	Louisville OFF vs North Carolina State DEF	1.25 (82)	-0.03
	1.24 (76)	Louisville DEF vs North Carolina State OFF	1.21 (76)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME

0.30	Louisville OFF vs North Carolina State DEF	--
--	Louisville DEF vs North Carolina State OFF	1.00

RUSHING GAME

RUSH YARDS / GAME				
+16.6	167.3 (46)	Louisville OFF vs North Carolina State DEF	150.7 (71)	-46.0
	195.3 (113)	Louisville DEF vs North Carolina State OFF	149.3 (64)	

RUSH YARDS / ATTEMPT				
+0.00	4.4 (53)	Louisville OFF vs North Carolina State DEF	4.4 (76)	-0.60
	4.6 (88)	Louisville DEF vs North Carolina State OFF	4.0 (72)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Louisville OFF vs North Carolina State DEF	2.80 (98)
2.50 (103)	Louisville DEF vs North Carolina State OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS				
Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.	2.81 (110)	Louisville OFF vs North Carolina State DEF	2.82 (66)	-0.29
	3.0 (97)	Louisville DEF vs North Carolina State OFF	3.3 (42)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE				
-3.97	0.72 (84)	Louisville OFF vs North Carolina State DEF	0.76 (89)	+32.3
	0.52 (11)	Louisville DEF vs North Carolina State OFF	0.84 (21)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE				
How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.19 (96)	Louisville OFF vs North Carolina State DEF	0.19 (77)	-2.35
	0.12 (132)	Louisville DEF vs North Carolina State OFF	0.15 (46)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE				
-1.10	0.14 (70)	Louisville OFF vs North Carolina State DEF	0.15 (85)	+2.10
	0.14 (104)	Louisville DEF vs North Carolina State OFF	0.16 (87)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.14	1.12 (68)	Louisville OFF vs North Carolina State DEF	0.98 (69)	+0.18
	0.93 (59)	Louisville DEF vs North Carolina State OFF	1.11 (74)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+1.33	1.94 (16)	Louisville OFF vs North Carolina State DEF	0.61 (35)	+1.20
	0.81 (56)	Louisville DEF vs North Carolina State OFF	2.01 (15)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.78 (31)	F+	0.20 (57)
0.95 (25)	OF+	0.50 (41)
0.45 (45)	DF+	-0.07 (77)
0.51 (29)	FEI	0.07 (58)
0.18 (31)	OFEI	0.05 (51)
0.30 (28)	DFEI	0.07 (60)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.36	Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).
--------------	---

FEI DELTA

+0.44	Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.
--------------	---

0.03 (65)	NET SUCCESS RATE	-0.08 (87)
0.54 (30)	OFF SUCCESS RATE (OSR)	0.39 (77)

+5.40	59.7	Memphis OFF vs Charlotte DEF	72.0	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	74.0	Memphis DEF vs Charlotte OFF	56.3	

POINTS / GAME

+11.4	29.7 (53)	Memphis OFF vs Charlotte DEF	33.7 (110)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	27.7 (74)	Memphis DEF vs Charlotte OFF	12.3 (127)	

YARDS / GAME

+359.8	486.7 (10)	Memphis OFF vs Charlotte DEF	382.3 (73)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	490.7 (130)	Memphis DEF vs Charlotte OFF	235.3 (133)	

YARDS / PLAY

+5.30	8.2 (1)	Memphis OFF vs Charlotte DEF	5.3 (62)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	6.6 (116)	Memphis DEF vs Charlotte OFF	4.2 (125)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
-26.1	+16.6

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	80.0 (94)	Memphis OFF vs Charlotte DEF	92.9 (112)	-49.2
	63.6 (6)	Memphis DEF vs Charlotte OFF	100.0 (1)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
+19.8	32.1 (105)	Memphis OFF vs Charlotte DEF	35.3 (46)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	36.8 (55)	Memphis DEF vs Charlotte OFF	13.9 (138)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

-0.70	265.0 (39)	Memphis OFF vs Charlotte DEF	265.7 (111)	-112.0
	279.0 (116)	Memphis DEF vs Charlotte OFF	167.0 (111)	

PASS YARDS / ATTEMPT

+4.40	11.9 (1)	Memphis OFF vs Charlotte DEF	7.5 (71)	-3.30
	8.7 (111)	Memphis DEF vs Charlotte OFF	5.4 (125)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
90.8 (9)	Memphis vs Charlotte	40.6 (126)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
76.7 (16)	Memphis OFF vs Charlotte DEF	37.0 (22)
36.8 (20)	Memphis DEF vs Charlotte OFF	13.8 (133)

SACKS ALLOWED / GAME				
-12.7	1.30 (36)	Memphis OFF vs Charlotte DEF	1.30 (91)	-10.6
	3.0 (21)	Memphis DEF vs Charlotte OFF	1.00 (19)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
65.7	Memphis vs Charlotte	63.4
QB RUSH YARDS / GAME		
--	Memphis vs Charlotte	--

PASSING EXPLOSIVENESS				
+0.19	1.37 (20)	Memphis OFF vs Charlotte DEF	1.18 (51)	-0.34
	1.40 (123)	Memphis DEF vs Charlotte OFF	1.06 (131)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
1.00	Memphis OFF vs Charlotte DEF	--
--	Memphis DEF vs Charlotte OFF	1.30

RUSHING GAME				
RUSH YARDS / GAME				
+105.0	221.7 (11)	Memphis OFF vs Charlotte DEF	116.7 (41)	-143.4
	211.7 (122)	Memphis DEF vs Charlotte OFF	68.3 (134)	
RUSH YARDS / ATTEMPT				
+2.90	6.2 (3)	Memphis OFF vs Charlotte DEF	3.3 (32)	-2.60
	5.4 (123)	Memphis DEF vs Charlotte OFF	2.80 (125)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Memphis OFF vs Charlotte DEF	nan

4.8 (40)	Memphis DEF vs Charlotte OFF	nan
----------	------------------------------	-----

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+1.68	3.5 (24)	Memphis OFF vs Charlotte DEF	2.79 (63)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	3.4 (125)	Memphis DEF vs Charlotte OFF	2.38 (136)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-5.00	0.75 (64)	Memphis OFF vs Charlotte DEF	0.80 (105)	-27.1
	0.84 (118)	Memphis DEF vs Charlotte OFF	0.57 (122)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.15 (45)	Memphis OFF vs Charlotte DEF	0.25 (19)	-25.1
	0.13 (127)	Memphis DEF vs Charlotte OFF	0.28 (136)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-1.10	0.13 (42)	Memphis OFF vs Charlotte DEF	0.14 (102)	+2.40
	0.15 (91)	Memphis DEF vs Charlotte OFF	0.17 (113)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.26	1.27 (34)	Memphis OFF vs Charlotte DEF	1.01 (74)	-0.34
	1.25 (120)	Memphis DEF vs Charlotte OFF	0.90 (117)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+1.51	2.76 (2)	Memphis OFF vs Charlotte DEF	1.25 (98)	-0.64
	1.86 (127)	Memphis DEF vs Charlotte OFF	1.22 (65)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.09 (61)	F+	-1.80 (134)
0.67 (34)	OF+	-1.91 (135)
-0.54 (94)	DF+	-1.31 (128)
-0.01 (64)	FEI	-1.00 (131)
0.14 (37)	OFEI	-0.71 (136)
-0.14 (91)	DFEI	-0.21 (96)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.92

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.99

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.07 (52)	NET SUCCESS RATE	-0.33 (125)
0.48 (49)	OFF SUCCESS RATE (OSR)	0.20 (129)
0.42 (70)	OPP SUCCESS RATE (DSR)	0.53 (107)
0.47 (46)	OFF SUCCESS RATE (CFBD)	0.36 (126)
0.42 (89)	DEF SUCCESS RATE (CFBD)	0.47 (128)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+39.8

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-4.80

-21.9

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.26 (36)	OFF PPA	-0.10 (133)
0.18 (116)	DEF PPA ALLOWED	0.17 (113)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.10

-0.27

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

-1.01 (115)	F+	-0.11 (72)
-1.44 (126)	OF+	-0.34 (86)
-0.48 (91)	DF+	0.01 (69)
-0.70 (117)	FEI	-0.53 (105)
-0.52 (127)	OFEI	-0.39 (107)
-0.22 (100)	DFEI	-0.22 (100)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.13

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.17

-0.14 (100)	NET SUCCESS RATE	0.26 (18)
0.39 (82)	OFF SUCCESS RATE (OSR)	0.56 (24)
0.52 (103)	OPP SUCCESS RATE (DSR)	0.30 (21)
0.46 (52)	OFF SUCCESS RATE (CFBD)	0.40 (106)
0.44 (108)	DEF SUCCESS RATE (CFBD)	0.39 (68)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-39.9

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+8.90

+4.00

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.16 (70)	OFF PPA	0.16 (69)
0.12 (95)	DEF PPA ALLOWED	-0.16 (5)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.31

+0.03

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

+6.00	64.7	Akron OFF vs Central Michigan DEF	66.7	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	65.3	Akron DEF vs Central Michigan OFF	57.3	

POINTS / GAME

+5.40	11.0 (132)	Akron OFF vs Central Michigan DEF	33.3 (106)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	39.0 (125)	Akron DEF vs Central Michigan OFF	11.3 (129)	

YARDS / GAME

+106.7	275.7 (124)	Akron OFF vs Central Michigan DEF	425.3 (105)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	482.3 (127)	Akron DEF vs Central Michigan OFF	226.0 (134)	

YARDS / PLAY

+1.40	4.3 (121)	Akron OFF vs Central Michigan DEF	6.4 (108)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	7.4 (133)	Akron DEF vs Central Michigan OFF	3.9 (131)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+6.71	+9.25

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	85.7 (70)	Akron OFF vs Central Michigan DEF	86.7 (76)	-15.3
	85.7 (61)	Akron DEF vs Central Michigan OFF	100.0 (1)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.	35.0 (92)	Akron OFF vs Central Michigan DEF	54.3 (131)	-10.6
	42.9 (92)	Akron DEF vs Central Michigan OFF	34.2 (95)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

-62.4	174.3 (106)	Akron OFF vs Central Michigan DEF	236.7 (90)	-217.0

	6.0 (130)	Akron DEF vs Central Michigan OFF	4.1 (66)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Akron OFF vs Central Michigan DEF	2.00 (109)

2.00 (109)

Akron DEF vs Central Michigan OFF

0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

3.6 (12)

Akron OFF vs Central Michigan DEF

3.5 (136)

-0.21

2.89 (72)

Akron DEF vs Central Michigan OFF

3.2 (63)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-11.5

0.82 (27)

Akron OFF vs Central Michigan DEF

0.93 (135)

+13.9

0.69 (55)

Akron DEF vs Central Michigan OFF

0.83 (25)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+5.39

0.13 (25)

Akron OFF vs Central Michigan DEF

0.14 (123)

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.19 (80)

Akron DEF vs Central Michigan OFF

0.13 (22)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

+5.40

0.20 (130)

Akron OFF vs Central Michigan DEF

0.14 (97)

+1.20

0.15 (88)

Akron DEF vs Central Michigan OFF

0.16 (93)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.07

1.37 (21)

Akron OFF vs Central Michigan DEF

1.29 (125)

+0.06

0.97 (67)

Akron DEF vs Central Michigan OFF

1.03 (92)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

-0.03

0.77 (111)

Akron OFF vs Central Michigan DEF

0.80 (55)

5.0 (30)

Ohio DEF vs Kent State OFF

0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.43

3.6 (14)

Ohio OFF vs Kent State DEF

3.2 (112)

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

2.83 (67)

Ohio DEF vs Kent State OFF

2.78 (112)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+2.15

0.86 (12)

Ohio OFF vs Kent State DEF

0.84 (118)

-14.7

0.76 (89)

Ohio DEF vs Kent State OFF

0.62 (117)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.10 (8)

Ohio OFF vs Kent State DEF

0.16 (110)

-6.89

0.21 (50)

Ohio DEF vs Kent State OFF

0.22 (122)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-0.40

0.14 (63)

Ohio OFF vs Kent State DEF

0.14 (99)

+0.50

0.16 (76)

Ohio DEF vs Kent State OFF

0.16 (95)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.07

1.09 (79)

Ohio OFF vs Kent State DEF

1.02 (84)

-0.17

1.07 (94)

Ohio DEF vs Kent State OFF

0.90 (120)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+0.06

0.95 (93)

Ohio OFF vs Kent State DEF

0.89 (68)

-0.29

1.03 (75)

Ohio DEF vs Kent State OFF

0.73 (112)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

-0.70 (104)	F+	-1.65 (130)
-0.50 (91)	OF+	-1.48 (129)
-0.88 (101)	DF+	-1.58 (133)
-0.40 (93)	FEI	-1.05 (132)
-0.15 (82)	OFEI	-0.47 (121)
-0.30 (113)	DFEI	-0.56 (136)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.58

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.65

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.14 (102)	NET SUCCESS RATE	-0.37 (128)
0.50 (42)	OFF SUCCESS RATE (OSR)	0.15 (134)
0.64 (128)	OPP SUCCESS RATE (DSR)	0.52 (103)
0.44 (69)	OFF SUCCESS RATE (CFBD)	0.31 (136)
0.43 (99)	DEF SUCCESS RATE (CFBD)	0.47 (132)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+22.3

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-2.00

-48.9

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.22 (52)	OFF PPA	-0.03 (125)
0.28 (130)	DEF PPA ALLOWED	0.20 (120)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.02

-0.30

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

FPI -7.7

Miami 37.6 - Bowling Green 13.1
(86% Miami)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	55.3	Bowling Green OFF vs Miami DEF	62.0	-11.7
	63.7	Bowling Green DEF vs Miami OFF	68.7	

POINTS / GAME

Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.	6.7 (138)	Bowling Green OFF vs Miami DEF	9.7 (3)	-4.60
	41.7 (130)	Bowling Green DEF vs Miami OFF	43.3 (7)	

YARDS / GAME

Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.	187.3 (138)	Bowling Green OFF vs Miami DEF	263.7 (9)	-153.8
	422.3 (99)	Bowling Green DEF vs Miami OFF	499.7 (7)	

YARDS / PLAY

Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.	3.4 (137)	Bowling Green OFF vs Miami DEF	4.3 (14)	-1.60
	6.6 (116)	Bowling Green DEF vs Miami OFF	7.3 (4)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+25.5	+48.4

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

+20.0	100.0 (1)	Bowling Green OFF vs Miami DEF	80.0 (42)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	100.0 (119)	Bowling Green DEF vs Miami OFF	100.0 (1)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.	23.1 (131)	Bowling Green OFF vs Miami DEF	36.6 (51)	-28.2
	42.9 (92)	Bowling Green DEF vs Miami OFF	57.6 (3)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

-122.6	100.7 (136)	Bowling Green OFF vs Miami DEF	223.3 (66)	+181.0
	158.7 (14)	Bowling Green DEF vs Miami OFF	339.7 (4)	

PASS YARDS / ATTEMPT

-1.30	4.6 (134)	Bowling Green OFF vs Miami DEF	5.9 (12)	+2.10
	7.8 (79)	Bowling Green DEF vs Miami OFF	9.9 (10)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
29.0 (135)	Bowling Green vs Miami	96.9 (1)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
5.9 (137)	Bowling Green OFF vs Miami DEF	33.2 (15)
43.1 (32)	Bowling Green DEF vs Miami OFF	65.8 (37)

SACKS ALLOWED / GAME				
-2.65	1.70 (53)	Bowling Green OFF vs Miami DEF	2.70 (27)	-15.2
	2.70 (27)	Bowling Green DEF vs Miami OFF	1.00 (19)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
53.0	Bowling Green vs Miami	84.5

QB RUSH YARDS / GAME		
--	Bowling Green vs Miami	--

PASSING EXPLOSIVENESS				
-0.19	0.96 (137)	Bowling Green OFF vs Miami DEF	1.15 (42)	-0.02
	1.29 (94)	Bowling Green DEF vs Miami OFF	1.28 (49)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.70	Bowling Green OFF vs Miami DEF	--
--	Bowling Green DEF vs Miami OFF	0.30

RUSHING GAME

RUSH YARDS / GAME				
+46.4	86.7 (125)	Bowling Green OFF vs Miami DEF	40.3 (1)	-103.7
	263.7 (136)	Bowling Green DEF vs Miami OFF	160.0 (52)	

RUSH YARDS / ATTEMPT				
+0.80	2.70 (128)	Bowling Green OFF vs Miami DEF	1.90 (3)	-1.70
	6.5 (136)	Bowling Green DEF vs Miami OFF	4.8 (30)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Bowling Green OFF vs Miami DEF	4.2 (53)

3.8 (67)	Bowling Green DEF vs Miami OFF	0.00 (1)
----------	--------------------------------	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	61.3	UTEP OFF vs New Mexico DEF	60.7	-3.80
	62.3	UTEP DEF vs New Mexico OFF	66.7	

POINTS / GAME

+11.6	8.0 (137)	UTEP OFF vs New Mexico DEF	13.0 (9)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	45.3 (136)	UTEP DEF vs New Mexico OFF	28.7 (56)	

YARDS / GAME

+7.10	190.0 (137)	UTEP OFF vs New Mexico DEF	284.3 (21)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	427.7 (109)	UTEP DEF vs New Mexico OFF	326.3 (103)	

YARDS / PLAY

+0.40	3.1 (138)	UTEP OFF vs New Mexico DEF	4.7 (27)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	6.9 (126)	UTEP DEF vs New Mexico OFF	4.9 (96)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+18.9	+6.11

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	37.5 (137)	UTEP OFF vs New Mexico DEF	75.0 (26)	-29.5
	93.8 (117)	UTEP DEF vs New Mexico OFF	85.7 (70)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+1.84	18.4 (135)	UTEP OFF vs New Mexico DEF	37.5 (62)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	59.4 (138)	UTEP DEF vs New Mexico OFF	38.5 (70)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

-75.7	103.0 (134)	UTEP OFF vs New Mexico DEF	178.7 (26)	-108.6
	259.3 (108)	UTEP DEF vs New Mexico OFF	150.7 (123)	

PASS YARDS / ATTEMPT

-1.40	5.3 (127)	UTEP OFF vs New Mexico DEF	6.7 (47)	-2.20
	9.6 (125)	UTEP DEF vs New Mexico OFF	7.4 (65)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
39.5 (128)	UTEP vs New Mexico	71.2 (65)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
24.1 (120)	UTEP OFF vs New Mexico DEF	82.8 (124)
34.9 (18)	UTEP DEF vs New Mexico OFF	51.2 (63)

SACKS ALLOWED / GAME				
-10.6	5.0 (137)	UTEP OFF vs New Mexico DEF	2.30 (39)	-18.2
	0.70 (119)	UTEP DEF vs New Mexico OFF	3.3 (121)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
65.5	UTEP vs New Mexico	57.4
QB RUSH YARDS / GAME		
--	UTEP vs New Mexico	--

PASSING EXPLOSIVENESS				
-0.28	1.09 (125)	UTEP OFF vs New Mexico DEF	1.37 (115)	+0.03
	1.21 (63)	UTEP DEF vs New Mexico OFF	1.23 (65)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.70	UTEP OFF vs New Mexico DEF	--
--	UTEP DEF vs New Mexico OFF	0.00

RUSHING GAME

RUSH YARDS / GAME				
-18.7	87.0 (124)	UTEP OFF vs New Mexico DEF	105.7 (30)	+7.40
	168.3 (93)	UTEP DEF vs New Mexico OFF	175.7 (40)	

RUSH YARDS / ATTEMPT				
-0.90	2.40 (133)	UTEP OFF vs New Mexico DEF	3.3 (32)	-0.80
	4.9 (106)	UTEP DEF vs New Mexico OFF	4.1 (66)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	UTEP OFF vs New Mexico DEF	6.8 (5)

2.50 (103)

UTEP DEF vs New Mexico OFF

0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.28

2.52 (132)

UTEP OFF vs New Mexico DEF

1.92 (3)

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

2.97 (90)

UTEP DEF vs New Mexico OFF

3.3 (44)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+0.00

0.50 (132)

UTEP OFF vs New Mexico DEF

0.50 (7)

+22.2

0.67 (44)

UTEP DEF vs New Mexico OFF

0.89 (6)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+7.74

0.24 (130)

UTEP OFF vs New Mexico DEF

0.25 (20)

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.22 (36)

UTEP DEF vs New Mexico OFF

0.14 (39)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-3.20

0.22 (136)

UTEP OFF vs New Mexico DEF

0.25 (2)

-0.90

0.13 (121)

UTEP DEF vs New Mexico OFF

0.12 (34)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.19

1.05 (88)

UTEP OFF vs New Mexico DEF

0.86 (40)

+0.17

1.01 (76)

UTEP DEF vs New Mexico OFF

1.18 (53)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+0.76

1.50 (45)

UTEP OFF vs New Mexico DEF

0.75 (51)

+0.41

0.73 (48)

UTEP DEF vs New Mexico OFF

1.14 (72)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

-1.77 (132)	F+	0.32 (55)
-1.52 (131)	OF+	0.00 (67)
-1.56 (132)	DF+	0.47 (44)
-1.13 (133)	FEI	0.02 (61)
-0.56 (130)	OFEI	-0.13 (76)
-0.41 (128)	DFEI	0.06 (63)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.90

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-1.15

-0.60 (137)	NET SUCCESS RATE	0.32 (12)
0.19 (131)	OFF SUCCESS RATE (OSR)	0.56 (25)
0.79 (137)	OPP SUCCESS RATE (DSR)	0.24 (9)
0.37 (123)	OFF SUCCESS RATE (CFBD)	0.42 (95)
0.47 (130)	DEF SUCCESS RATE (CFBD)	0.32 (12)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-91.5

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-4.80

-23.6

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

-0.18 (137)	OFF PPA	0.16 (66)
0.25 (129)	DEF PPA ALLOWED	-0.15 (7)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

-0.03

-0.09

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Kentucky DEF vs South Carolina OFF

2.42 (7)

+1.68

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.65 (39)	F+	0.67 (36)
0.44 (45)	OF+	0.58 (40)
0.79 (29)	DF+	0.57 (38)
0.43 (35)	FEI	0.48 (33)
0.03 (55)	OFEI	0.12 (41)
0.39 (20)	DFEI	0.30 (28)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.00

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.05

0.08 (49)	NET SUCCESS RATE	0.12 (38)
0.48 (51)	OFF SUCCESS RATE (OSR)	0.55 (27)
0.41 (62)	OPP SUCCESS RATE (DSR)	0.43 (75)
0.52 (11)	OFF SUCCESS RATE (CFBD)	0.48 (42)
0.42 (88)	DEF SUCCESS RATE (CFBD)	0.36 (43)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-4.50

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+5.50

+14.6

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.24 (46)	OFF PPA	0.23 (50)
0.02 (57)	DEF PPA ALLOWED	0.15 (104)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.08

+0.21

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

29.3 (55)

YARDS / GAME

+59.3

387.0 (57)

Purdue OFF vs Illinois DEF

435.7 (114)

Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.

500.0 (134)

Purdue DEF vs Illinois OFF

392.0 (54)

YARDS / PLAY

Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.

5.3 (73)

Purdue OFF vs Illinois DEF

6.3 (106)

-0.20

7.2 (128)

Purdue DEF vs Illinois OFF

6.4 (20)

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)

+12.2

+6.35

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

+10.7

85.7 (70)

Purdue OFF vs Illinois DEF

100.0 (119)

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.

100.0 (119)

Purdue DEF vs Illinois OFF

75.0 (106)

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+6.69

42.9 (47)

Purdue OFF vs Illinois DEF

50.0 (121)

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.

57.6 (136)

Purdue DEF vs Illinois OFF

43.8 (40)

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

Purdue OFF vs Illinois DEF

8.9 (115)

-1.10

9.0 (118)

Purdue DEF vs Illinois OFF

7.9 (50)

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
82.1 (34)	Purdue vs Illinois	89.5 (15)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
63.5 (42)	Purdue OFF vs Illinois DEF	38.7 (23)
24.2 (6)	Purdue DEF vs Illinois OFF	86.5 (4)

SACKS ALLOWED / GAME				
-9.86	3.7 (128)	Purdue OFF vs Illinois DEF	0.70 (119)	-12.2
	1.00 (103)	Purdue DEF vs Illinois OFF	1.00 (19)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
70.0	Purdue vs Illinois	63.7
QB RUSH YARDS / GAME		
--	Purdue vs Illinois	--

PASSING EXPLOSIVENESS				
-0.07	1.20 (85)	Purdue OFF vs Illinois DEF	1.27 (88)	-0.09
	1.37 (113)	Purdue DEF vs Illinois OFF	1.27 (50)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.30	Purdue OFF vs Illinois DEF	--
--	Purdue DEF vs Illinois OFF	0.30

RUSHING GAME				
RUSH YARDS / GAME				
-95.4	76.3 (131)	Purdue OFF vs Illinois DEF	171.7 (95)	-90.7
	244.0 (133)	Purdue DEF vs Illinois OFF	153.3 (59)	
RUSH YARDS / ATTEMPT				
-2.20	2.30 (135)	Purdue OFF vs Illinois DEF	4.5 (84)	-0.90
	6.0 (130)	Purdue DEF vs Illinois OFF	5.1 (21)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Purdue OFF vs Illinois DEF	2.20 (107)
3.0 (90)	Purdue DEF vs Illinois OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.13	3.0 (85)	Purdue OFF vs Illinois DEF	2.77 (61)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	3.3 (123)	Purdue DEF vs Illinois OFF	3.5 (26)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+0.69	0.79 (45)	Purdue OFF vs Illinois DEF	0.78 (102)	-9.52
	0.76 (89)	Purdue DEF vs Illinois OFF	0.67 (101)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.16 (57)	Purdue OFF vs Illinois DEF	0.21 (53)	-1.14
	0.15 (112)	Purdue DEF vs Illinois OFF	0.11 (11)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

+0.20	0.13 (55)	Purdue OFF vs Illinois DEF	0.13 (110)	-2.60
	0.14 (101)	Purdue DEF vs Illinois OFF	0.11 (30)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

-0.13	0.87 (123)	Purdue OFF vs Illinois DEF	1.01 (75)	-0.18
	1.35 (130)	Purdue DEF vs Illinois OFF	1.17 (55)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

-0.01	0.52 (129)	Purdue OFF vs Illinois DEF	0.53 (27)	-0.00
	1.75 (124)	Purdue DEF vs Illinois OFF	1.75 (25)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

Oregon State DEF vs Colorado State OFF

0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.23

3.2 (59)

Oregon State OFF vs Colorado State DEF

3.4 (128)

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

3.0 (100)

Oregon State DEF vs Colorado State OFF

2.62 (124)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-11.1

0.78 (49)

Oregon State OFF vs Colorado State DEF

0.89 (129)

+3.81

0.76 (89)

Oregon State DEF vs Colorado State OFF

0.80 (34)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.11 (9)

Oregon State OFF vs Colorado State DEF

0.16 (109)

-11.7

0.13 (124)

Oregon State DEF vs Colorado State OFF

0.20 (106)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-5.00

0.13 (50)

Oregon State OFF vs Colorado State DEF

0.18 (41)

-1.20

0.17 (62)

Oregon State DEF vs Colorado State OFF

0.15 (86)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

-0.61

0.77 (131)

Oregon State OFF vs Colorado State DEF

1.38 (133)

+0.02

0.91 (51)

Oregon State DEF vs Colorado State OFF

0.93 (114)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

-1.55

0.80 (109)

Oregon State OFF vs Colorado State DEF

2.34 (135)

+1.74

0.89 (66)

Oregon State DEF vs Colorado State OFF

2.63 (3)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

-0.07 (70)	F+	-0.66 (101)
-0.01 (68)	OF+	-0.08 (74)
0.03 (66)	DF+	-1.19 (125)
-0.17 (76)	FEI	-0.51 (104)
-0.07 (65)	OFEI	-0.11 (75)
-0.02 (78)	DFEI	-0.39 (124)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.41

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.34

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.07 (51)	NET SUCCESS RATE	-0.18 (109)
0.44 (64)	OFF SUCCESS RATE (OSR)	0.42 (70)
0.38 (49)	OPP SUCCESS RATE (DSR)	0.60 (121)
0.42 (85)	OFF SUCCESS RATE (CFBD)	0.44 (72)
0.41 (86)	DEF SUCCESS RATE (CFBD)	0.46 (123)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+24.7

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-15.9

+4.40

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.26 (37)	OFF PPA	0.27 (33)
0.09 (82)	DEF PPA ALLOWED	0.16 (112)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.09

+0.18

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

3-0

TCU 23.5 - BYU 19.9 (57% TCU)

2-2

Pass 38% / Rush 62%

Pass 49% / Rush 51%

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN				
PLAYS / GAME				
Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	57.5	BYU OFF vs TCU DEF	57.0	-5.80
	65.0	BYU DEF vs TCU OFF	71.3	
POINTS / GAME				
+22.2	34.5 (23)	BYU OFF vs TCU DEF	14.3 (15)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	20.0 (36)	BYU DEF vs TCU OFF	18.0 (103)	
YARDS / GAME				
+129.5	462.0 (17)	BYU OFF vs TCU DEF	283.0 (20)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	314.5 (31)	BYU DEF vs TCU OFF	364.0 (73)	
YARDS / PLAY				
+2.70	8.0 (2)	BYU OFF vs TCU DEF	5.0 (44)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	4.8 (33)	BYU DEF vs TCU OFF	5.1 (81)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+8.86	-24.8

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
+35.0	80.0 (94)	BYU OFF vs TCU DEF	70.0 (13)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	100.0 (119)	BYU DEF vs TCU OFF	75.0 (106)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
+19.1	50.0 (14)	BYU OFF vs TCU DEF	31.4 (21)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	46.1 (112)	BYU DEF vs TCU OFF	45.6 (34)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME				
PASS YARDS / GAME				
+47.0	222.0 (69)	BYU OFF vs TCU DEF	175.0 (25)	+49.0
	225.0 (68)	BYU DEF vs TCU OFF	274.0 (29)	
PASS YARDS / ATTEMPT				
+3.00	10.3 (4)	BYU OFF vs TCU DEF	7.3 (67)	+1.80
	6.3 (28)	BYU DEF vs TCU OFF	8.1 (42)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
91.1 (8)	BYU vs TCU	72.9 (61)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
81.8 (11)	BYU OFF vs TCU DEF	70.8 (95)
72.3 (98)	BYU DEF vs TCU OFF	45.3 (77)

SACKS ALLOWED / GAME				
-11.0	0.50 (4)	BYU OFF vs TCU DEF	2.30 (39)	-2.36
	1.50 (84)	BYU DEF vs TCU OFF	2.70 (106)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
65.1	BYU vs TCU	65.3
QB RUSH YARDS / GAME		
---	BYU vs TCU	---

PASSING EXPLOSIVENESS				
+0.23	1.16 (102)	BYU OFF vs TCU DEF	0.93 (1)	+0.06
	1.18 (52)	BYU DEF vs TCU OFF	1.24 (61)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
1.00	BYU OFF vs TCU DEF	---
---	BYU DEF vs TCU OFF	1.00

RUSHING GAME				
RUSH YARDS / GAME				
+132.0	240.0 (8)	BYU OFF vs TCU DEF	108.0 (31)	+0.50
	89.5 (15)	BYU DEF vs TCU OFF	90.0 (120)	
RUSH YARDS / ATTEMPT				
+3.30	6.8 (2)	BYU OFF vs TCU DEF	3.5 (38)	-0.70
	3.3 (32)	BYU DEF vs TCU OFF	2.60 (130)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	BYU OFF vs TCU DEF	4.5 (46)
5.0 (30)	BYU DEF vs TCU OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.79	4.0 (2)	BYU OFF vs TCU DEF	2.54 (35)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	2.41 (25)	BYU DEF vs TCU OFF	3.0 (84)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+37.9	0.94 (4)	BYU OFF vs TCU DEF	0.56 (14)	+7.29
	0.77 (95)	BYU DEF vs TCU OFF	0.84 (17)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.12 (18)	BYU OFF vs TCU DEF	0.21 (49)	-2.93
	0.22 (33)	BYU DEF vs TCU OFF	0.16 (62)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-12.0	0.06 (2)	BYU OFF vs TCU DEF	0.18 (45)	-3.80
	0.17 (59)	BYU DEF vs TCU OFF	0.13 (55)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.85	1.68 (1)	BYU OFF vs TCU DEF	0.82 (33)	+0.43
	0.63 (12)	BYU DEF vs TCU OFF	1.06 (86)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+1.52	1.89 (18)	BYU OFF vs TCU DEF	0.37 (13)	+0.44
	0.46 (19)	BYU DEF vs TCU OFF	0.90 (99)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

	229.0 (76)	Arkansas DEF vs Texas A&M; OFF	193.5 (91)	

PASS YARDS / ATTEMPT

-2.10	6.6 (91)	Arkansas OFF vs Texas A&M; DEF	8.7 (111)	-2.90
	8.5 (105)	Arkansas DEF vs Texas A&M; OFF	5.6 (122)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
63.9 (80)	Arkansas vs Texas A&M;	48.1 (117)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
38.5 (95)	Arkansas OFF vs Texas A&M; DEF	76.9 (113)
58.4 (65)	Arkansas DEF vs Texas A&M; OFF	44.5 (78)

SACKS ALLOWED / GAME				
-13.0	3.3 (121)	Arkansas OFF vs Texas A&M; DEF	1.00 (103)	-16.5
	2.00 (58)	Arkansas DEF vs Texas A&M; OFF	2.00 (67)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
59.5	Arkansas vs Texas A&M;	54.7
QB RUSH YARDS / GAME		
--	Arkansas vs Texas A&M;	--

PASSING EXPLOSIVENESS				
-0.19	1.12 (120)	Arkansas OFF vs Texas A&M; DEF	1.31 (98)	-0.04
	1.11 (28)	Arkansas DEF vs Texas A&M; OFF	1.07 (130)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.70	Arkansas OFF vs Texas A&M; DEF	--
--	Arkansas DEF vs Texas A&M; OFF	1.30

RUSHING GAME				
RUSH YARDS / GAME				
-55.5	70.0 (133)	Arkansas OFF vs Texas A&M; DEF	125.5 (49)	-1.50
	153.0 (74)	Arkansas DEF vs Texas A&M; OFF	151.5 (62)	
RUSH YARDS / ATTEMPT				
-1.70	2.30 (135)	Arkansas OFF vs Texas A&M; DEF	4.0 (60)	-0.60
	4.6 (88)	Arkansas DEF vs Texas A&M; OFF	4.0 (72)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Arkansas OFF vs Texas A&M; DEF	3.5 (77)

4.0 (61)	Arkansas DEF vs Texas A&M; OFF	0.00 (1)
----------	--------------------------------	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS				
Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.	2.58 (126)	Arkansas OFF vs Texas A&M; DEF	2.76 (59)	-0.18
	3.2 (116)	Arkansas DEF vs Texas A&M; OFF	3.2 (57)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE				
+12.8	0.84 (17)	Arkansas OFF vs Texas A&M; DEF	0.71 (67)	-2.50
	0.88 (127)	Arkansas DEF vs Texas A&M; OFF	0.85 (14)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE				
How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.18 (87)	Arkansas OFF vs Texas A&M; DEF	0.18 (93)	-1.28
	0.15 (113)	Arkansas DEF vs Texas A&M; OFF	0.17 (65)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE				
+0.30	0.18 (121)	Arkansas OFF vs Texas A&M; DEF	0.18 (52)	+1.70
	0.14 (97)	Arkansas DEF vs Texas A&M; OFF	0.16 (92)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS				
-0.15	0.76 (133)	Arkansas OFF vs Texas A&M; DEF	0.90 (50)	+0.03
	1.16 (112)	Arkansas DEF vs Texas A&M; OFF	1.19 (52)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS				
-0.64	0.19 (137)	Arkansas OFF vs Texas A&M; DEF	0.83 (60)	-0.13
	1.13 (88)	Arkansas DEF vs Texas A&M; OFF	1.01 (85)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.09 (61)	F+	0.85 (28)
0.36 (48)	OF+	0.66 (35)
-0.31 (86)	DF+	0.71 (33)
0.11 (56)	FEI	0.64 (21)
0.11 (43)	OFEI	0.17 (33)
-0.05 (80)	DFEI	0.31 (27)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.42

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.53

-0.11 (97)	NET SUCCESS RATE	-0.03 (80)
0.35 (97)	OFF SUCCESS RATE (OSR)	0.38 (85)
0.46 (87)	OPP SUCCESS RATE (DSR)	0.41 (66)
0.42 (89)	OFF SUCCESS RATE (CFBD)	0.44 (66)
0.43 (101)	DEF SUCCESS RATE (CFBD)	0.38 (62)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-8.30

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-6.40

-7.70

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.05 (108)	OFF PPA	0.04 (110)
0.16 (108)	DEF PPA ALLOWED	0.03 (68)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.02

-0.12

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

SOR 115

RICE

FPI -14.0

3-1

UTSA 33.0 - Rice 27.0 (61% UTSA)

1-3

Pass 50% / Rush 50%

Pass 28% / Rush 72%

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN					
PLAYS / GAME					
+21.7	65.0	UTSA OFF vs Rice DEF	66.0	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	
	81.0	UTSA DEF vs Rice OFF	58.3		
POINTS / GAME					
+11.4	32.0 (36)	UTSA OFF vs Rice DEF	39.3 (128)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.	
	33.7 (110)	UTSA DEF vs Rice OFF	15.0 (123)		
YARDS / GAME					
+90.7	360.7 (74)	UTSA OFF vs Rice DEF	423.3 (102)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.	
	460.3 (122)	UTSA DEF vs Rice OFF	307.0 (111)		
YARDS / PLAY					
Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.	5.5 (63)	UTSA OFF vs Rice DEF	6.4 (108)	-0.50	
	5.7 (77)	UTSA DEF vs Rice OFF	5.3 (73)		

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+8.58	+8.20

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
+25.0	100.0 (1)	UTSA OFF vs Rice DEF	80.0 (42)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	80.0 (42)	UTSA DEF vs Rice OFF	75.0 (106)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
+2.88	30.9 (111)	UTSA OFF vs Rice DEF	50.0 (121)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	43.1 (97)	UTSA DEF vs Rice OFF	21.2 (132)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME				
PASS YARDS / GAME

Clemson 27.4 - Miami 20.6 (62% Clemson)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN				
PLAYS / GAME				
Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	68.7	Miami OFF vs Clemson DEF	73.5	-10.1
	62.0	Miami DEF vs Clemson OFF	67.3	
POINTS / GAME				
+10.00	43.3 (7)	Miami OFF vs Clemson DEF	22.0 (47)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	9.7 (3)	Miami DEF vs Clemson OFF	21.0 (90)	
YARDS / GAME				
+76.9	499.7 (7)	Miami OFF vs Clemson DEF	372.5 (65)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	263.7 (9)	Miami DEF vs Clemson OFF	314.0 (110)	
YARDS / PLAY				
+1.80	7.3 (4)	Miami OFF vs Clemson DEF	5.1 (52)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	4.3 (14)	Miami DEF vs Clemson OFF	4.7 (105)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+5.97	+4.45

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %				
Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	100.0 (1)	Miami OFF vs Clemson DEF	90.0 (90)	-0.91
	80.0 (42)	Miami DEF vs Clemson OFF	90.9 (46)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
+27.9	57.6 (3)	Miami OFF vs Clemson DEF	39.0 (68)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	36.6 (51)	Miami DEF vs Clemson OFF	27.3 (124)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME				
PASS YARDS / GAME				
+124.9	339.7 (4)	Miami OFF vs Clemson DEF	214.8 (53)	-67.0
	223.3 (66)	Miami DEF vs Clemson OFF	156.3 (119)	
PASS YARDS / ATTEMPT				
+3.90	9.9 (10)	Miami OFF vs Clemson DEF	6.0 (17)	-0.10
	5.9 (12)	Miami DEF vs Clemson OFF	5.8 (119)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
96.9 (1)	Miami vs Clemson	34.1 (134)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
65.8 (37)	Miami OFF vs Clemson DEF	74.9 (109)
33.2 (15)	Miami DEF vs Clemson OFF	28.1 (114)

SACKS ALLOWED / GAME				
-14.6	1.00 (19)	Miami OFF vs Clemson DEF	2.00 (58)	-3.72
	2.70 (27)	Miami DEF vs Clemson OFF	2.80 (111)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
84.5	Miami vs Clemson	62.0
QB RUSH YARDS / GAME		
--	Miami vs Clemson	--

PASSING EXPLOSIVENESS				
+0.09	1.28 (49)	Miami OFF vs Clemson DEF	1.19 (54)	+0.03
	1.15 (42)	Miami DEF vs Clemson OFF	1.18 (93)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.30	Miami OFF vs Clemson DEF	--
--	Miami DEF vs Clemson OFF	1.00

RUSHING GAME				
RUSH YARDS / GAME				
+2.20	160.0 (52)	Miami OFF vs Clemson DEF	157.8 (85)	+117.5
	40.3 (1)	Miami DEF vs Clemson OFF	157.8 (54)	
RUSH YARDS / ATTEMPT				
+0.40	4.8 (30)	Miami OFF vs Clemson DEF	4.4 (76)	+2.30
	1.90 (3)	Miami DEF vs Clemson OFF	4.2 (62)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Miami OFF vs Clemson DEF	3.0 (90)
4.2 (53)	Miami DEF vs Clemson OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

3.9 (4)

Miami OFF vs Clemson DEF

3.5 (134)

-0.18

2.15 (7)

Miami DEF vs Clemson OFF

2.76 (113)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+8.52

0.81 (31)

Miami OFF vs Clemson DEF

0.73 (74)

+22.9

0.57 (16)

Miami DEF vs Clemson OFF

0.80 (34)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+5.15

0.12 (15)

Miami OFF vs Clemson DEF

0.13 (126)

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.27 (8)

Miami DEF vs Clemson OFF

0.21 (114)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-9.20

0.07 (4)

Miami OFF vs Clemson DEF

0.16 (71)

+2.60

0.16 (66)

Miami DEF vs Clemson OFF

0.19 (126)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.16

1.56 (5)

Miami OFF vs Clemson DEF

1.40 (135)

+0.49

0.57 (6)

Miami DEF vs Clemson OFF

1.06 (85)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+1.44

2.14 (12)

Miami OFF vs Clemson DEF

0.70 (43)

+1.29

0.27 (6)

Miami DEF vs Clemson OFF

1.56 (36)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

1.87 (5)

F+

0.33 (54)

1.91 (5)	OF+	-0.53 (93)
1.65 (9)	DF+	1.08 (22)
1.14 (7)	FEI	0.17 (53)
0.65 (3)	OFEI	-0.28 (95)
0.52 (13)	DFEI	0.38 (21)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+1.07

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.97

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.48 (3)	NET SUCCESS RATE	0.03 (61)
0.72 (2)	OFF SUCCESS RATE (OSR)	0.37 (87)
0.24 (9)	OPP SUCCESS RATE (DSR)	0.34 (36)
0.57 (3)	OFF SUCCESS RATE (CFBD)	0.34 (131)
0.32 (14)	DEF SUCCESS RATE (CFBD)	0.41 (84)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+45.1

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+37.9

+13.0

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.44 (2)	OFF PPA	-0.03 (124)
-0.05 (31)	DEF PPA ALLOWED	0.02 (58)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.42

+0.02

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Texas Tech DEF vs Colorado OFF

0.88 (101)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

1.23 (15)	F+	-0.30 (79)
0.86 (27)	OF+	-0.67 (99)
1.40 (14)	DF+	0.26 (52)
0.58 (23)	FEI	-0.24 (81)
0.02 (56)	OFEI	-0.32 (98)
0.53 (12)	DFEI	0.14 (50)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.73

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.82

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

0.03 (61)	NET SUCCESS RATE	-0.23 (114)
0.37 (86)	OFF SUCCESS RATE (OSR)	0.21 (128)
0.34 (37)	OPP SUCCESS RATE (DSR)	0.44 (81)
0.51 (20)	OFF SUCCESS RATE (CFBD)	0.40 (109)
0.35 (32)	DEF SUCCESS RATE (CFBD)	0.38 (61)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+26.1

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-6.70

-13.6

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.27 (32)	OFF PPA	0.06 (103)
0.00 (52)	DEF PPA ALLOWED	0.01 (54)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.26

+0.06

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Pass 54% / Rush 46%

Pass 49% / Rush 51%

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN				
PLAYS / GAME				
Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	67.3	Washington OFF vs USC DEF	59.4	-2.70
	61.0	Washington DEF vs USC OFF	71.6	
POINTS / GAME				
Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.	21.3 (88)	Washington OFF vs USC DEF	26.4 (72)	-27.9
	17.0 (24)	Washington DEF vs USC OFF	39.8 (10)	
YARDS / GAME				
Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.	345.7 (88)	Washington OFF vs USC DEF	354.8 (52)	-217.8
	280.7 (17)	Washington DEF vs USC OFF	489.4 (9)	
YARDS / PLAY				
Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.	5.1 (81)	Washington OFF vs USC DEF	6.0 (91)	-3.10
	4.6 (22)	Washington DEF vs USC OFF	6.8 (13)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+1.78	+9.15
THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).	

RED ZONE %				
+7.55	84.6 (79)	Washington OFF vs USC DEF	84.2 (58)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	85.7 (61)	Washington DEF vs USC OFF	78.6 (101)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %				
Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.	28.2 (120)	Washington OFF vs USC DEF	40.7 (81)	-40.9
	27.8 (11)	Washington DEF vs USC OFF	56.1 (4)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME				
PASS YARDS / GAME				
+15.8	252.0 (47)	Washington OFF vs USC DEF	236.2 (89)	+144.3
	180.7 (28)	Washington DEF vs USC OFF	325.0 (5)	
PASS YARDS / ATTEMPT				

-1.10	7.3 (68)	Washington OFF vs USC DEF	8.4 (101)	+2.90
	6.5 (38)	Washington DEF vs USC OFF	9.4 (17)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
67.0 (77)	Washington vs USC	90.4 (12)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
41.2 (88)	Washington OFF vs USC DEF	38.7 (24)
58.4 (66)	Washington DEF vs USC OFF	86.0 (6)

SACKS ALLOWED / GAME				
-5.36	3.0 (115)	Washington OFF vs USC DEF	1.60 (83)	-10.7
	2.30 (39)	Washington DEF vs USC OFF	1.00 (19)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
65.4	Washington vs USC	70.9
QB RUSH YARDS / GAME		
--	Washington vs USC	--

PASSING EXPLOSIVENESS				
-0.16	1.21 (78)	Washington OFF vs USC DEF	1.36 (112)	+0.03
	1.16 (46)	Washington DEF vs USC OFF	1.19 (90)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.70	Washington OFF vs USC DEF	--
--	Washington DEF vs USC OFF	0.60

RUSHING GAME				
RUSH YARDS / GAME				
-24.9	93.7 (116)	Washington OFF vs USC DEF	118.6 (45)	+64.4
	100.0 (23)	Washington DEF vs USC OFF	164.4 (47)	
RUSH YARDS / ATTEMPT				
-0.80	3.2 (110)	Washington OFF vs USC DEF	4.0 (60)	+1.30
	3.2 (28)	Washington DEF vs USC OFF	4.5 (47)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Washington OFF vs USC DEF	3.6 (76)

6.2 (12)	Washington DEF vs USC OFF	0.00 (1)
----------	---------------------------	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.	2.82 (109)	Washington OFF vs USC DEF	2.59 (41)	-0.72
	2.32 (17)	Washington DEF vs USC OFF	3.3 (49)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-14.7	0.62 (117)	Washington OFF vs USC DEF	0.76 (89)	+46.0
	0.33 (1)	Washington DEF vs USC OFF	0.79 (42)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+16.6	0.22 (121)	Washington OFF vs USC DEF	0.19 (71)	How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.
	0.31 (4)	Washington DEF vs USC OFF	0.17 (68)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

+1.60	0.13 (50)	Washington OFF vs USC DEF	0.12 (130)	-11.4
	0.20 (20)	Washington DEF vs USC OFF	0.09 (6)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

-0.02	0.85 (125)	Washington OFF vs USC DEF	0.86 (42)	+0.35
	0.92 (54)	Washington DEF vs USC OFF	1.26 (35)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+0.01	1.13 (74)	Washington OFF vs USC DEF	1.12 (85)	-0.19
	0.89 (65)	Washington DEF vs USC OFF	0.69 (117)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.87 (27)	F+	1.35 (13)
0.50 (41)	OF+	2.27 (1)
1.16 (19)	DF+	0.05 (64)
0.51 (29)	FEI	0.86 (13)
0.13 (40)	OFEI	0.80 (1)
0.38 (21)	DFEI	-0.06 (82)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.23

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.35

0.08 (47)	NET SUCCESS RATE	0.25 (21)
0.39 (80)	OFF SUCCESS RATE (OSR)	0.68 (5)
0.31 (29)	OPP SUCCESS RATE (DSR)	0.42 (73)
0.45 (64)	OFF SUCCESS RATE (CFBD)	0.53 (5)
0.34 (26)	DEF SUCCESS RATE (CFBD)	0.42 (91)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-16.7

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

-3.60

+36.9

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.15 (72)	OFF PPA	0.31 (18)
-0.15 (6)	DEF PPA ALLOWED	0.19 (118)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

-0.04

+0.46

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

3.3 (120)

Army DEF vs Louisiana Tech OFF

2.65 (123)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

+22.2

0.89 (6)

Army OFF vs Louisiana Tech DEF

0.67 (44)

-25.0

0.75 (82)

Army DEF vs Louisiana Tech OFF

0.50 (132)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.10 (4)

Army OFF vs Louisiana Tech DEF

0.23 (29)

-17.2

0.19 (79)

Army DEF vs Louisiana Tech OFF

0.23 (124)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-19.7

0.04 (1)

Army OFF vs Louisiana Tech DEF

0.24 (3)

+5.10

0.13 (113)

Army DEF vs Louisiana Tech OFF

0.18 (122)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.63

1.44 (7)

Army OFF vs Louisiana Tech DEF

0.81 (28)

-0.44

1.33 (128)

Army DEF vs Louisiana Tech OFF

0.89 (121)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+0.76

Indiana OFF vs Rutgers DEF

8.7 (111)

+1.30

6.9 (53)

Indiana DEF vs Rutgers OFF

8.2 (40)

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
92.7 (5)	Indiana vs Rutgers	67.5 (74)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
83.9 (8)	Indiana OFF vs Rutgers DEF	45.8 (39)
80.7 (120)	Indiana DEF vs Rutgers OFF	46.1 (73)

SACKS ALLOWED / GAME				
-11.5	1.30 (36)	Indiana OFF vs Rutgers DEF	0.70 (119)	-9.82
	2.00 (58)	Indiana DEF vs Rutgers OFF	3.0 (115)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
72.9	Indiana vs Rutgers	57.8

QB RUSH YARDS / GAME		
--	Indiana vs Rutgers	--

PASSING EXPLOSIVENESS				
+0.18	1.38 (19)	Indiana OFF vs Rutgers DEF	1.20 (59)	-0.12
	1.42 (128)	Indiana DEF vs Rutgers OFF	1.30 (40)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
0.00	Indiana OFF vs Rutgers DEF	--
--	Indiana DEF vs Rutgers OFF	3.0

RUSHING GAME				
RUSH YARDS / GAME				
+34.7	212.7 (18)	Indiana OFF vs Rutgers DEF	178.0 (100)	+28.0
	88.3 (14)	Indiana DEF vs Rutgers OFF	116.3 (94)	
RUSH YARDS / ATTEMPT				
+0.60	5.7 (6)	Indiana OFF vs Rutgers DEF	5.1 (114)	+0.80
	2.80 (15)	Indiana DEF vs Rutgers OFF	3.6 (88)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Indiana OFF vs Rutgers DEF	3.0 (90)
6.5 (6)	Indiana DEF vs Rutgers OFF	0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

Pass 44% / Rush 56%

San Diego State 29.6 - Texas State 27.2 (55% San Diego State)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

+10.4	74.7	Texas State OFF vs San Diego State DEF	71.7	Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.
	76.7	Texas State DEF vs San Diego State OFF	69.3	

POINTS / GAME

+24.3	27.3 (67)	Texas State OFF vs San Diego State DEF	31.7 (99)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	41.7 (130)	Texas State DEF vs San Diego State OFF	13.0 (126)	

YARDS / GAME

+264.0	478.3 (13)	Texas State OFF vs San Diego State DEF	425.3 (105)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	506.3 (135)	Texas State DEF vs San Diego State OFF	295.3 (118)	

YARDS / PLAY

+2.80	6.4 (20)	Texas State OFF vs San Diego State DEF	5.9 (85)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	6.6 (116)	Texas State DEF vs San Diego State OFF	4.3 (121)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
-12.0	+7.35

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.	64.3 (129)	Texas State OFF vs San Diego State DEF	83.3 (52)	-22.4
	82.3 (51)	Texas State DEF vs San Diego State OFF	85.7 (70)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

+41.5	56.1 (5)	Texas State OFF vs San Diego State DEF	40.0 (75)	Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.
	53.3 (129)	Texas State DEF vs San Diego State OFF	27.9 (121)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

-11.0	216.0 (70)	Texas State OFF vs San Diego State DEF	227.0 (73)	-202.7
	370.0 (138)	Texas State DEF vs San Diego State OFF	167.3 (110)	

PASS YARDS / ATTEMPT

-1.50	8.0 (47)	Texas State OFF vs San Diego State DEF	9.5 (124)	-2.60
	8.3 (100)	Texas State DEF vs San Diego State OFF	5.7 (121)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
85.8 (24)	Texas State vs San Diego State	34.9 (133)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
73.8 (20)	Texas State OFF vs San Diego State DEF	60.9 (75)
46.1 (41)	Texas State DEF vs San Diego State OFF	23.5 (121)

SACKS ALLOWED / GAME				
-16.7	1.00 (19)	Texas State OFF vs San Diego State DEF	1.70 (75)	-8.68
	0.30 (135)	Texas State DEF vs San Diego State OFF	2.30 (86)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
65.4	Texas State vs San Diego State	54.5

QB RUSH YARDS / GAME		
--	Texas State vs San Diego State	--

PASSING EXPLOSIVENESS				
+0.27	1.32 (28)	Texas State OFF vs San Diego State DEF	1.05 (16)	-0.08
	1.22 (68)	Texas State DEF vs San Diego State OFF	1.14 (110)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
1.00	Texas State OFF vs San Diego State DEF	--
--	Texas State DEF vs San Diego State OFF	1.30

RUSHING GAME

RUSH YARDS / GAME				
+64.0	262.3 (5)	Texas State OFF vs San Diego State DEF	198.3 (114)	-8.30
	136.3 (58)	Texas State DEF vs San Diego State OFF	128.0 (84)	

RUSH YARDS / ATTEMPT				
+1.30	5.6 (10)	Texas State OFF vs San Diego State DEF	4.3 (71)	-0.90
	4.3 (71)	Texas State DEF vs San Diego State OFF	3.4 (95)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	Texas State OFF vs San Diego State DEF	2.80 (98)

3.8 (67)	Texas State DEF vs San Diego State OFF	0.00 (1)
----------	--	----------

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.	3.3 (48)	Texas State OFF vs San Diego State DEF	3.4 (127)	-0.56
	2.50 (30)	Texas State DEF vs San Diego State OFF	2.94 (94)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-18.3	0.67 (101)	Texas State OFF vs San Diego State DEF	0.85 (121)	-4.55
	0.59 (22)	Texas State DEF vs San Diego State OFF	0.55 (129)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+7.50	0.14 (37)	Texas State OFF vs San Diego State DEF	0.11 (133)	How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.
	0.25 (15)	Texas State DEF vs San Diego State OFF	0.20 (107)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

+1.40	0.11 (27)	Texas State OFF vs San Diego State DEF	0.10 (137)	+1.30
	0.16 (73)	Texas State DEF vs San Diego State OFF	0.17 (111)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.32	1.13 (64)	Texas State OFF vs San Diego State DEF	0.81 (31)	+0.09
	0.88 (46)	Texas State DEF vs San Diego State OFF	0.97 (107)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+2.11	2.57 (5)	Texas State OFF vs San Diego State DEF	0.46 (20)	+0.14
	0.73 (47)	Texas State DEF vs San Diego State OFF	0.87 (103)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

-0.24 (76)	F+	-0.50 (93)
0.79 (30)	OF+	-1.02 (115)
-1.17 (122)	DF+	0.05 (64)
-0.24 (81)	FEI	-0.28 (85)
0.15 (35)	OFEI	-0.45 (120)
-0.29 (111)	DFEI	0.15 (47)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

+0.16

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

FEI DELTA

+0.04

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.00 (72)	NET SUCCESS RATE	-0.29 (120)
0.53 (31)	OFF SUCCESS RATE (OSR)	0.18 (133)
0.54 (108)	OPP SUCCESS RATE (DSR)	0.47 (88)
0.49 (28)	OFF SUCCESS RATE (CFBD)	0.35 (129)
0.46 (122)	DEF SUCCESS RATE (CFBD)	0.44 (107)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

+28.5

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+6.40

-35.4

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.31 (20)	OFF PPA	-0.09 (132)
0.15 (99)	DEF PPA ALLOWED	0.10 (84)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.21

-0.23

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

+0.77	3.7 (11)	Cincinnati OFF vs Arizona DEF	2.59 (42)	Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.
	3.2 (114)	Cincinnati DEF vs Arizona OFF	3.5 (17)	

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-16.7	0.83 (22)	Cincinnati OFF vs Arizona DEF	1.00 (136)	+18.3
	0.67 (44)	Cincinnati DEF vs Arizona OFF	0.85 (14)	

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.	0.13 (28)	Cincinnati OFF vs Arizona DEF	0.25 (14)	-5.96
	0.18 (94)	Cincinnati DEF vs Arizona OFF	0.12 (12)	

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

-6.10	0.11 (20)	Cincinnati OFF vs Arizona DEF	0.17 (61)	-4.90
	0.16 (64)	Cincinnati DEF vs Arizona OFF	0.11 (30)	

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

+0.59	1.60 (2)	Cincinnati OFF vs Arizona DEF	1.01 (79)	+0.19
	1.21 (116)	Cincinnati DEF vs Arizona OFF	1.40 (14)	

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

+1.46	2.21 (11)	Cincinnati OFF vs Arizona DEF	0.75 (52)	-0.21
	1.21 (96)	Cincinnati DEF vs Arizona OFF	1.01 (84)	

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!

ADVANCED RATINGS (F+/FEI/DSR/PPA)

0.61 (43)	F+	0.74 (32)
------------------	-----------	------------------

0.99 (22)	OF+	0.85 (28)
0.07 (62)	DF+	0.60 (37)
0.33 (41)	FEI	0.41 (37)
0.26 (25)	OFEI	0.26 (25)
0.04 (64)	DFEI	0.19 (41)

THE BRAIN TRUST POWER RANKINGS: Forget about records and luck against the spread! These are the heavy-duty computer models stripping away all the schedule bias. This tells you who the true heavyweights are when you strip down the raw, independent efficiencies of both programs.

NET EFFICIENCY DELTA (THE VEGAS FILTER)

Anchor efficiency metric (OFEI/DFEI) that filters out schedule softness and raw luck. Scale: greater than +0.50 = dominant edge (away), -0.50 to +0.50 = razor-thin wash, less than -0.50 = dominant edge (home).

-0.15

FEI DELTA

Away FEI minus Home FEI -- same composite power-rating differential as Net Success Rate, on the real OFEI/DFEI-family scale. Scale: greater than +0.50 / less than -0.50 = lopsided edge, -0.50 to +0.50 = close.

-0.08

0.11 (41)	NET SUCCESS RATE	0.18 (28)
0.52 (36)	OFF SUCCESS RATE (OSR)	0.58 (17)
0.41 (62)	OPP SUCCESS RATE (DSR)	0.39 (55)
0.50 (27)	OFF SUCCESS RATE (CFBD)	0.50 (22)
0.41 (87)	DEF SUCCESS RATE (CFBD)	0.35 (31)

DOWN-TO-DOWN CONSISTENCY: This is the ultimate baseline of smashmouth execution! Forget the lucky 80-yard fluke plays. Gaining 5 yards on 1st down, moving the chains, and staying ahead of schedule -- whoever owns this stays out of 3rd-and-long hell.

NET SUCCESS RATE DELTA

Down-to-down consistency, ignoring single fluke breakaway plays. Scale: 0-2% Grind Match, 2.1-5% Script Control, 5.1%+ Total Monopoly.

-7.40

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE)

+12.3

+17.1

'STAY-ON-SCHEDULE' RUSHING DELTA (SUCCESS RATE): Each team's real Off Success Rate (OSR) minus the opposing Def Success Rate allowed (DSR). Scale: greater than +5.0 pts Ground Dominance, 0.0-5.0 Hard-Nosed Chipping, less than 0.0 Behind the Chains.

0.36 (11)	OFF PPA	0.21 (55)
0.10 (88)	DEF PPA ALLOWED	0.00 (50)

THE VALUE ADDED: Advanced expected points added! Every single snap either moves you closer to a touchdown or hurts your chances. This tracks who maximizes value on every single play and who bleeds points under pressure.

PASSING DOWN PANIC INDEX (PPA)

+0.36

+0.11

PASSING DOWN PANIC INDEX (PPA): Each team's real Off PPA minus the opposing Def PPA allowed. Scale: greater than +0.10 Ice in the Veins, 0.00-0.10 Stable Execution, less than 0.00 Pocket Collapse risk.

Pass 55% / Rush 45%

at

SOR 132

HAWAII

1-3

Pass 64% / Rush 36%

Hawai'i 28.2 - San Jose State 19.2
(66% Hawai'i)

THE STAKES: This is where you lay down the baseline reality. Before you look at anything else, what does the scoreboard math say? This sets up the entire blueprint of who is coming in hot and who is projected to slide or conquer.

BREAKDOWN

PLAYS / GAME

Snapping-speed control -- can a tempo team force extra possessions? Scale: 0-3 Neutral, 3.1-6 Tempo Edge, 6.1-9 Fatigue Risk, 9.1+ Style Clash.	70.0	San Jose State OFF vs Hawai'i DEF	66.8	-0.40
	71.7	San Jose State DEF vs Hawai'i OFF	75.3	

POINTS / GAME

+6.70	21.0 (90)	San Jose State OFF vs Hawai'i DEF	26.0 (69)	Isolates the real scoring separation when both offenses face their true defensive matchups. Scale: 0-3 Toss-Up, 3.1-7 Standard Edge, 7.1-13 Dominant, 14+ Blowout.
	29.7 (82)	San Jose State DEF vs Hawai'i OFF	18.0 (103)	

YARDS / GAME

+13.1	374.7 (60)	San Jose State OFF vs Hawai'i DEF	399.8 (85)	Raw space-generation gap -- audit against YPP to filter out junk-time yards. Scale: 0-25 Even, 26-60 Volume Edge, 61-100 Major Push, 101+ Dominance.
	380.0 (69)	San Jose State DEF vs Hawai'i OFF	341.8 (91)	

YARDS / PLAY

+0.20	5.4 (66)	San Jose State OFF vs Hawai'i DEF	6.0 (91)	Down-to-down per-snap efficiency; exposes fake high-tempo offenses. Scale: 0.0-0.2 Dead Even, 0.3-0.5 Clear Edge, 0.6-0.9 Mismatch, 1.0+ Overmatch.
	5.3 (62)	San Jose State DEF vs Hawai'i OFF	4.5 (115)	

SPEED VS SUBSTANCE: Sure, you put up a mountain of yards, but are you eating up chunks of turf on every snap, or just snapping the ball 90 times a game? Yards per play blows the lid off fake offenses and exposes who is actually explosive.

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS)	
+5.02	+3.26

THE FRAUD INDEX & FRAUD GAP (POINTS VS. YARDS): Each team's real Yards-edge divided by their real Points-edge -- exposes empty-yardage volume. Scale: under 7.0 Hyper-Efficient, 7.0-11.0 Balanced, over 11.0 Yardage Illusion (hollow stats).

RED ZONE %

+17.8	83.3 (81)	San Jose State OFF vs Hawai'i DEF	85.7 (61)	Execution inside the 20 when the field contracts and space vanishes. Scale: 0-4% Even, 4.1-10% RZ Advantage, 10.1%+ Liquidation.
	88.9 (85)	San Jose State DEF vs Hawai'i OFF	68.8 (122)	

THE BLOOD ZONE: The field shrinks, the space vanishes, and the big boys in the interior start throwing hands! Settling for field goals here is a slow death. Do you punch it into the dirt for 6, or does the defense stand tall on the goal line?

3RD DOWN %

Drive survival and conversion sustainability on money downs. Scale: 0-3% Even, 3.1-7% Chain Edge, 7.1%+ Monopoly.	36.4 (86)	San Jose State OFF vs Hawai'i DEF	45.3 (109)	-10.9
	37.8 (63)	San Jose State DEF vs Hawai'i OFF	39.7 (63)	

MONEY DOWN EXECUTION: The stadium is roaring, the chains are set, and it's time to find out who has the ice in their veins! Can the quarterback find the soft spot in the zone, or will the pass rush crash the party and force the punting unit onto the field?

PASSING GAME

PASS YARDS / GAME

+43.2	264.7 (40)	San Jose State OFF vs Hawai'i DEF	221.5 (62)	+24.8
	233.7 (83)	San Jose State DEF vs Hawai'i OFF	258.5 (45)	

PASS YARDS / ATTEMPT

-0.90	7.2 (71)	San Jose State OFF vs Hawai'i DEF	8.1 (95)	-0.90
	6.5 (38)	San Jose State DEF vs Hawai'i OFF	5.6 (122)	

AIR DEPTH DELTA (PASSING VOLUME VS. EFFICIENCY): Compares each team's real passing-yardage edge against their real yards/attempt edge -- true deep threat vs. system volume. Scale (YPA differential): greater than +0.5 Lethal Air Strike, 0.0-0.5 Horizontal Distribution, less than 0.0 Strangled Lanes.

THE AERIAL ASSAULT: Are we talking about a conservative dink-and-dunk scheme or an absolute vertical circus? This showcases the raw capability of the passing attack to stretch boundaries and force safeties to drop deep.

QBR		
50.3 (110)	San Jose State vs Hawai'i	57.5 (100)

THE GENERALS' DUEL: This is the ultimate test of quarterback processing speed vs. secondary lockouts. Can the signal-caller read the blitz and drop a dime into a tight window, or will a ballhawk safety read his eyes and take it the other way?

OFFENSIVE EFFICIENCY		
19.0 (129)	San Jose State OFF vs Hawai'i DEF	34.4 (17)
52.7 (55)	San Jose State DEF vs Hawai'i OFF	25.7 (118)

SACKS ALLOWED / GAME				
-15.3	2.30 (86)	San Jose State OFF vs Hawai'i DEF	1.80 (72)	-12.4
	1.00 (103)	San Jose State DEF vs Hawai'i OFF	2.80 (111)	

THE FINISHING DELTA (SACK RATE VS. HAVOC ALLOWED): Each team's real Def Sack Rate (Def Sacks/Game divided by 65 real offensive snaps) minus the opposing offense's real Havoc-Allowed rate. Large negative (around -15%) = disruption that doesn't finish -- a slippery or quick-release QB evades sacks despite real pressure. Small negative (around -5%) = the defense converts most of its real disruption into actual sacks.

COMPLETION %		
58.6	San Jose State vs Hawai'i	59.7
QB RUSH YARDS / GAME		
--	San Jose State vs Hawai'i	--

PASSING EXPLOSIVENESS				
-0.00	1.22 (68)	San Jose State OFF vs Hawai'i DEF	1.23 (70)	+0.05
	1.07 (19)	San Jose State DEF vs Hawai'i OFF	1.12 (115)	

VERTICAL LIGHTNING STRIKE DELTA (PASSING EXPLOSIVENESS): Each team's real Off Explosiveness minus the opposing Def Explosiveness allowed -- predicts explosive-play volatility. Scale: greater than +0.15 Chunk Play Hazard, 0.00-0.15 Methodical Rhythm, less than 0.00 Capsized Skies (secondary locks down the deep ball).

CHUNK PLAY HAZARD: The deep bombs that make the entire stadium jump out of their seats! This tells you if an offense can strike like lightning in one play, or if the defense is a lock to give up catastrophic breakdowns in the secondary.

INTERCEPTIONS / GAME		
1.70	San Jose State OFF vs Hawai'i DEF	--
--	San Jose State DEF vs Hawai'i OFF	0.30

RUSHING GAME				
RUSH YARDS / GAME				
-68.3	110.0 (103)	San Jose State OFF vs Hawai'i DEF	178.3 (102)	-63.0
	146.3 (67)	San Jose State DEF vs Hawai'i OFF	83.3 (129)	
RUSH YARDS / ATTEMPT				
-1.20	3.6 (88)	San Jose State OFF vs Hawai'i DEF	4.8 (99)	-1.00
	4.2 (69)	San Jose State DEF vs Hawai'i OFF	3.2 (110)	

PER-CARRY REALITY DELTA (RUSHING VOLUME VS. EFFICIENCY): Compares each team's real rushing-yardage edge against their real yards/attempt edge -- flags a 'one-hit wonder' run game riding a single breakaway rather than real consistency.

THE GROUND POUND: This isn't pretty -- it's pure, unadulterated willpower. Are you chipping away at the defense with 5 yards a carry, or are you getting completely stuffed into a brick wall every time you hand the ball off?

TFL / GAME		
0.00 (1)	San Jose State OFF vs Hawai'i DEF	3.8 (67)

3.2 (88)

San Jose State DEF vs Hawai'i OFF

0.00 (1)

BACKFIELD DEMOLITION: Tackles for loss measure pure defensive disruption at the point of attack -- a defense racking these up is blowing up run plays before they start, putting the offense behind schedule on early downs and forcing exactly the kind of long-yardage situations a defense wants to see.

THE TRENCHES (O-LINE VS D-LINE)

LINE YARDS

Pure O-line block-displacement power, independent of RB talent. Scale: 0.00-0.15 Even Fronts, 0.16-0.35 Line Leverage, 0.36+ Trench Control.

3.2 (62)

San Jose State OFF vs Hawai'i DEF

3.4 (133)

-0.46

2.93 (85)

San Jose State DEF vs Hawai'i OFF

3.1 (66)

THE HEAVY ARTILLERY TRENCH WAR: This is where the big boys battle it out to see who owns the turf! This isn't about running backs; this is about the offensive line moving a mountain of humanity backwards. Elite line yards mean your front wall is clearing out whole lanes before anyone even touches the back!

POWER SUCCESS RATE

-17.9

0.57 (122)

San Jose State OFF vs Hawai'i DEF

0.75 (82)

-3.33

0.83 (113)

San Jose State DEF vs Hawai'i OFF

0.80 (34)

4TH & INCHES MANHOOD TEST (POWER SUCCESS RATE): Each team's real Off Power Success % minus the opposing Def Power Success % allowed. Scale: greater than +5.0% Short-Yardage Hammer, -5.0 to +5.0% Line Push Stalemate, less than -5.0% Interior Brick Wall.

4TH AND INCHES MANHOOD TEST: It's short yardage, everyone in the stadium knows exactly what is coming, and it's a test of sheer absolute physical dominance. Can you move the pile to move the chains, or does the defensive interior stone you cold at the line of scrimmage?

STUFF RATE

+6.98

0.19 (91)

San Jose State OFF vs Hawai'i DEF

0.11 (134)

How often running plays are stopped dead at/behind the line of scrimmage. Scale: 0-2.5% Balanced, 2.6-6% Breached Gaps, 6.1%+ Caved Front.

0.17 (101)

San Jose State DEF vs Hawai'i OFF

0.18 (80)

THE DRIVE KILLER: The percentage of runs stopped dead at or behind the line of scrimmage! A high defensive stuff rate means the defensive front seven is penetrating into the backfield and setting up camp. If you get caught behind the chains, your playbook is officially dead.

HAVOC RATE

+1.80

0.15 (81)

San Jose State OFF vs Hawai'i DEF

0.13 (109)

+3.20

0.14 (104)

San Jose State DEF vs Hawai'i OFF

0.17 (103)

THE CHAOS COEFFICIENT MISMATCH (HAVOC DELTA): Each team's real Off Havoc allowed minus the opposing Def Havoc forced. Scale: positive = elite ball security, 0 to -3.0% standard variance, worse than -3.0% = Avalanche Zone (turnover risk).

THE CHAOS FACTOR: Sacks, tackles for loss, forced fumbles, and tipped passes! This tracks pure defensive disruption. If a defense forces chaos, they break your rhythm, rattle your quarterback, and turn an orderly drive into complete and utter panic.

2ND LEVEL YARDS

-0.11

1.22 (47)

San Jose State OFF vs Hawai'i DEF

1.33 (129)

+0.28

1.03 (85)

San Jose State DEF vs Hawai'i OFF

1.31 (30)

2ND LEVEL DELTA (THE FRONT-7 MATCHUP): Each team's real Off 2nd Level Yards/Carry (5-10 yards past the line) minus the opposing defense's real 2nd Level Yards/Carry allowed -- the O-line-reaching-the-second-level vs. linebackers-filling-gaps battle. Positive = the offense is efficient here relative to what that defense usually allows (expect chunk plays); negative = the defense's linebacker corps is a real bottleneck that suppresses it.

LINEBACKER EVASION: This tracks the yardage picked up 5 to 10 yards past the line of scrimmage. It shows how clean the blocking is downfield and how effectively the running backs are slicing through the secondary level before safety help arrives.

OPEN FIELD YARDS

-0.54

0.72 (113)

San Jose State OFF vs Hawai'i DEF

1.26 (99)

+0.70

0.83 (61)

San Jose State DEF vs Hawai'i OFF

1.53 (39)

OPEN FIELD DELTA (THE SECONDARY MATCHUP): Each team's real Off Open Field Yards/Carry (11+ yards past the line) minus the opposing defense's real Open Field Yards/Carry allowed -- home-run rushing ability vs. a secondary's real open-field tackling. Positive = green flag for the offense, expect explosive runs; negative = red flag, the secondary's tacklers suppress the breakaway threat.

THE BREAKOUT GEIGER COUNTER: Anything gained past 10 yards! This isn't on the big uglies up front -- this is pure credit to your playmakers making guys miss in space, breaking ankles, and turning a simple run into a house call!
